

<p>CARNEGIE FORUM 305 WEST PINE STREET LODI, CALIFORNIA</p>	<p><b>AGENDA</b> <b>LODI</b> <b>PLANNING COMMISSION</b></p>	<p>REGULAR SESSION WEDNESDAY, OCTOBER 9, 2013 @ 7:00 PM</p>
---	---	---

For information regarding this agenda please contact:  
**Kari Chadwick @ (209) 333-6711**  
**Community Development Secretary**

***NOTE:** All staff reports or other written documentation relating to each item of business referred to on the agenda are on file in the Office of the Community Development Department, located at 221 W. Pine Street, Lodi, and are available for public inspection. If requested, the agenda shall be made available in appropriate alternative formats to persons with a disability, as required by Section 202 of the Americans with Disabilities Act of 1990 (42 U.S.C. Sec. 12132), and the federal rules and regulations adopted in implementation thereof. To make a request for disability-related modification or accommodation contact the Community Development Department as soon as possible and at least 24 hours prior to the meeting date.*

1. ROLL CALL

2. MINUTES – “August 14, 2013” & “September 11, 2013”

3. PUBLIC HEARINGS

- a. Request for Planning Commission approval of a Use Permit to allow a mixed martial arts studio and training facility within an existing industrial building located at 1744 Akerman Drive. (Applicant: Mike Kogan, on behalf of Diaz Ventures, LLC; File 13-U-14; CEQA Determination: Categorical Exemption Pursuant to CEQA Guidelines Section 15332 In-Fill Development Projects)
- b. Request for Planning Commission approval of a Use Permit to establish a ready-mix batch plant at 1560 East Pine Street. (Applicant: Reyes Jaramillo; File No. 13-U-11; CEQA Determination: Categorical Exemption Pursuant to CEQA Guidelines Section 15332 In-Fill Development Projects)
- c. Request for Planning Commission Approval of:
  - Growth Management Allocation for 232 Low Density Residential Lots; and
  - A Vested Subdivision Map for the Proposed Rosegate Subdivision, a 50 acre, 232 lot, single-family residential subdivision
  - Adopt Development Standards for the subdivision known as Rosegate Subdivision located within Planned Development 42 Zoning District
 (Applicant: FCB Homes, Inc.; File #'s: 13-S-01 and 13-GM-01; CEQA Status: Project Environmental Impact Report, State Clearinghouse No. 2005092096, Certified on November 15, 2006)
- d. Request for Planning Commission to Recommend to the City Council Adoption of the Draft Climate Action Plan and Certify the Negative Declaration

**NOTE:** The above items are quasi-judicial hearings and require disclosure of ex parte communications as set forth in Resolution No. 2006-31

4. PLANNING MATTERS/FOLLOW-UP ITEMS

5. ANNOUNCEMENTS AND CORRESPONDENCE
6. ACTIONS OF THE CITY COUNCIL
7. ACTIONS OF THE SITE PLAN AND ARCHITECTURAL REVIEW COMMITTEE
8. ART IN PUBLIC PLACES
9. COMMENTS BY THE PUBLIC (NON-AGENDA ITEMS)
10. COMMENTS BY THE PLANNING COMMISSIONERS & STAFF (NON-AGENDA ITEMS)
11. ADJOURNMENT

Pursuant to Section 54954.2(a) of the Government Code of the State of California, this agenda was posted at least 72 hours in advance of the scheduled meeting at a public place freely accessible to the public 24 hours a day.

*\*\*NOTICE: Pursuant to Government Code §54954.3(a), public comments may be directed to the legislative body concerning any item contained on the agenda for this meeting before (in the case of a Closed Session item) or during consideration of the item.*

**Right to Appeal:**

If you disagree with the decision of the commission, you have a right of appeal. Only persons who participated in the review process by submitting written or oral testimony, or by attending the public hearing, may appeal.

Pursuant to Lodi Municipal Code Section 17.72.110, actions of the Planning Commission may be appealed to the City Council by filing, within ten (10) business days, a written appeal with the City Clerk and payment of \$300.00 appeal fee. The appeal shall be processed in accordance with Chapter 17.88, Appeals, of the Lodi Municipal Code. Contact: City Clerk, City Hall 2<sup>nd</sup> Floor, 221 West Pine Street, Lodi, California 95240 – Phone: (209) 333-6702.

**LODI PLANNING COMMISSION  
REGULAR COMMISSION MEETING  
CARNEGIE FORUM, 305 WEST PINE STREET  
WEDNESDAY, AUGUST 14, 2013**

1. CALL TO ORDER / ROLL CALL

The Regular Planning Commission meeting of August 14, 2013 was called to order by Chair Kirsten at 7:05 p.m.

Present: Planning Commissioners – Hennecke, Kiser, Olson, Slater and Chair Kirsten

Absent: Planning Commissioners – Heinitz and Jones

Also Present: Community Development Director Konradt Bartlam, Associate Planner Immanuel Bereket, Deputy City Attorney Janice Magdich, and Administrative Secretary Kari Chadwick

2. MINUTES

“July 10, 2013”

MOTION / VOTE:

The Planning Commission, on motion of Commissioner Olson, Kiser second, approved the minutes of July 10, 2013 as written.

3. PUBLIC HEARINGS

- a) Notice thereof having been published according to law, an affidavit of which publication is on file in the Community Development Department, Chair Kirsten called for the public hearing to consider the request of the Planning Commission for approval of a Use Permit to establish a wine production facility at 1023 E Vine Street, Suite G. (Applicant: Erin Taylor, on behalf of Rianza Wines, LLC; File Number: 13-U-10)

Associate Planner Bereket gave a brief PowerPoint presentation based on the staff report. Staff recommends approval of the project as conditioned.

Commissioner Kiser asked if the normal condition for removal of the waste material is a part of the resolution. Associate Planner Bereket confirmed that condition thirteen of the resolution addresses that item.

Hearing Opened to the Public

- Erin and Richard Taylor, applicants, came forward to answer questions. Ms. Taylor stated that they are looking forward to moving the production of the wine to Lodi since they live here.
- Commissioner Slater asked if there would be a tasting room at this location. Ms. Taylor stated that they will only be crushing at this location since they already have a tasting room downtown on Elm Street.
- Chair Kirsten asked where on Elm Street was the tasting room. Ms. Taylor stated that they are located across from the Merlot.

Public Portion of Hearing Closed

MOTION / VOTE:

The Planning Commission, on motion of Commissioner Kiser, Hennecke second, approved the request for a Use Permit to establish a wine production facility at 1023 E Vine Street, Suite G subject to the conditions in the resolution. The motion carried by the following vote:

- Ayes: Commissioners – Hennecke, Kiser, Olson, Slater and Chair Kirsten
- Noes: Commissioners – None
- Absent: Commissioners - Heinitz and Jones

Chair Kirsten recused himself from Item 3b) because he owns property within the sphere of influence of the project.

- b) Notice thereof having been published according to law, an affidavit of which publication is on file in the Community Development Department, Commissioner Olson, Acting Chair, called for the public hearing to consider the request of the Planning Commission for approval of a Use Permit to allow a Type 2 (Winery) Alcoholic Beverage Control license at 13 North School Street. (Applicants: Judi Holly, on behalf of Weibel Family Vineyards; File Number: 13-U-12)

Associate Planner Bereket gave a brief PowerPoint presentation based on the staff report. Staff recommends approval of the project as conditioned.

Hearing Opened to the Public

- Judy Holly, applicant, came forward to answer questions.
- Commissioner Slater asked if the focus was going to be primarily on sparkling wines. Ms. Holly confirmed that the main focus will be on the sparkling wines, but there will also be still wines.

Public Portion of Hearing Closed

MOTION / VOTE:

The Planning Commission, on motion of Commissioner Kiser, Slater second, approved the request for a Use Permit to allow a Type 2 (Winery) Alcoholic Beverage Control license at 13 North School Street subject to the conditions in the resolution. The motion carried by the following vote:

- Ayes: Commissioners – Hennecke, Kiser, Olson and Slater
- Noes: Commissioners – None
- Absent: Commissioners - Heinitz, Jones and Chair Kirsten

Chair Kirsten rejoined the Commission.

- c) Notice thereof having been published according to law, an affidavit of which publication is on file in the Community Development Department, Chair Kirsten called for the public hearing to consider the request of the Planning Commission for approval of a Use Permit to allow a Type-41 On-Sale Beer and Wine Alcoholic Beverage Control License located at 722 West Lodi Avenue. (Applicant: Melissa Ng, on behalf of Zin Bistro; File Number: 13-U-13)

Associate Planner Bereket gave a brief PowerPoint presentation based on the staff report. Staff recommends approval of the project as conditioned.

Hearing Opened to the Public

- Melissa and Walter Ng, applicant, came forward to answer questions. Ms. Ng stated that she and her husband have been operating a catering business, Two Chefs

Events, in Lodi for twelve years. They are looking to branch out and open a Bistro at this location.

- Chair Kirsten asked what is your understanding of a finding of public necessity. Ms. Ng stated that there are only a few restaurants in this area that are open in the evening that also sell beer and wine.
- Commissioner Kiser asked if they were going to be open for lunch and dinner. Ms. Ng stated that they will be open for lunch and dinner. Mr. Ng stated that their plan is to be open for an upper end scale dinner on Thursday, Friday, and Saturday and the rest of the week will be just regular dining choices. Kiser asked if staff will be trained in ABC regulation. Ms. Ng stated that they would.
- Director Bartlam asked if Mr. and Ms. Ng would still be available to cater the rotary lunch on Mondays because he would hate to have to search out another cater. They assured him that they will be able to handle the job.

Public Portion of Hearing Closed

MOTION / VOTE:

The Planning Commission, on motion of Commissioner Kiser, Olson second, approved the request for a Use Permit to allow a Type-41 On-Sale Beer and Wine Alcoholic Beverage Control License located at 722 West Lodi Avenue subject to the conditions in the resolution. The motion carried by the following vote:

Ayes: Commissioners – Hennecke, Kiser, Olson, Slater and Chair Kirsten  
 Noes: Commissioners – None  
 Absent: Commissioners - Heinitz and Jones

- d) Notice thereof having been published according to law, an affidavit of which publication is on file in the Community Development Department, Chair Kirsten called for the public hearing to consider the request of the Planning Commission for approval of a Use Permit to allow a Type-47 On-Sale Beer, Wine and Distilled Spirits in conjunction with a restaurant operation at 910 South Cherokee Lane. (Applicant: Alberto Ortiz; File Number: 13-U-08)

Chair Kirsten stated that this item has been withdrawn from this agenda and will be re-advertised for a future meeting.

4. PLANNING MATTERS/FOLLOW-UP ITEMS

None

5. ANNOUNCEMENTS AND CORRESPONDENCE

None

6. ACTIONS OF THE CITY COUNCIL

Director Bartlam stated that a memo has been provided in the packet and staff is available to answer any questions.

7. ACTIONS OF THE SITE PLAN AND ARCHITECTURAL REVIEW COMMITTEE

Commissioner Kiser gave a brief report regarding the meeting that occurred earlier this evening. He stated that Lodi Memorial Hospital will be adding a MRI room.

8. ART IN PUBLIC PLACES

Chair Kirsten stated that the last meeting was cancelled. He also added that Deanie Bridle

9. COMMENTS BY THE PUBLIC (NON-AGENDA ITEMS)

None

10. COMMENTS BY STAFF AND COMMISSIONERS (NON-AGENDA ITEMS)

None

11. REORGANIZATION

a. Planning Commission Chair & Vice Chair

MOTION / VOTE:

The Planning Commission, on motion of Commissioner Kiser, Olson second, approved the nomination of Vice Chair Jones for the 2013/14 Planning Commission Chair position. There being no other nominations the motion carried by the following vote:

Ayes: Commissioners – Hennecke, Kiser, Olson, Slater and Chair Kirsten  
Noes: Commissioners – None  
Absent: Commissioners – Heinitz and Jones

MOTION / VOTE:

The Planning Commission, on motion of Chair Kirsten, Slater second, approved the nomination of Commissioner Kiser for the 2013/14 Planning Commission Vice Chair position. There being no other nominations the motion carried by the following vote:

Ayes: Commissioners – Hennecke, Kiser, Olson, Slater and Chair Kirsten  
Noes: Commissioners – None  
Absent: Commissioners – Heinitz and Jones

b. Planning Commission Representatives to: SPARC & Art In Public Places

MOTION / VOTE:

The Planning Commission, on motion of Chair Kirsten, Slater second, approved the nomination of Commissioner Kiser for the 2013/14 Planning Commission representative for the Site Plan and Architectural Review Committee position. There being no other nominations the motion carried by the following vote:

Ayes: Commissioners – Hennecke, Kiser, Olson, Slater and Chair Kirsten  
Noes: Commissioners – None  
Absent: Commissioners – Heinitz and Jones

MOTION / VOTE:

The Planning Commission, on motion of Commissioner Kiser, Slater second, approved the nomination of Commissioner Kirsten for the 2013/14 Planning Commission representative for the Art In Public Places Committee position. There being no other nominations the motion carried by the following vote:

Ayes: Commissioners – Hennecke, Kiser, Olson, Slater and Chair Kirsten  
Noes: Commissioners – None  
Absent: Commissioners – Heinitz and Jones

12. ADJOURNMENT

There being no further business to come before the Planning Commission, the meeting was adjourned at 7:27 p.m.

ATTEST:

Konradt Bartlam  
Planning Commission Secretary

**LODI PLANNING COMMISSION  
REGULAR COMMISSION MEETING  
CARNEGIE FORUM, 305 WEST PINE STREET  
WEDNESDAY, SEPTEMBER 11, 2013**

1. CALL TO ORDER / ROLL CALL

The Regular Planning Commission meeting of September 11, 2013 was called to order by Chair Jones at 7:00 p.m.

Present: Planning Commissioners – Heinitz, Kiser, Olson, Slater and Chair Jones

Absent: Planning Commissioners – Hennecke and Kirsten

Also Present: Associate Planner Immanuel Bereket, Deputy City Attorney Janice Magdich, Neighborhood Services Manager Joseph Wood, and Administrative Secretary Kari Chadwick

2. MINUTES

“August 14, 2013”

MOTION / VOTE:

No Motion made because there was not a quorum of Commissioners in attendance to make the motion. Item continued to the next meeting.

3. PUBLIC HEARINGS

- a) Notice thereof having been published according to law, an affidavit of which publication is on file in the Community Development Department, Chair Jones called for the public hearing to consider the request of the Planning Commission for approval of a Use Permit to establish a batch plant at 1560 East Pine Street. (Applicant: Reyes Jaramillo; File 13-U-11; CEQA Determination: Categorical Exemption Pursuant to CEQA Guidelines Section 15332 In-Fill Development Projects)

Chair Jones stated that a letter was received from the applicant requesting the item be continued to the October 9, 2013 Planning Commission Meeting.

MOTION / VOTE:

The Planning Commission, on motion of Vice Chair Kiser, Heinitz second, approved the request to continue the Use Permit to establish a batch plant at 1560 East Pine Street to the October 11, 2013 Planning Commission Meeting. The motion carried by the following vote:

Ayes: Commissioners – Heinitz, Kiser, Olson, Slater and Chair Jones  
Noes: Commissioners – None  
Absent: Commissioners - Hennecke and Kirsten

Chair Jones stated that item 3b) has been postpone to a future meeting.

- b) Notice thereof having been published according to law, an affidavit of which publication is on file in the Community Development Department, Chair Jones called for the public hearing to consider the request of the Planning Commission for:
- I. Growth Management Allocation for 232 Low Density Residential Lots; and
  - II. A Vested Subdivision Map for the Proposed Rosegate Subdivision, a 50 acre, 232 lot, single-family residential subdivision

(Applicant: FCB Homes, Inc.; File #'s: 13-S-01 and 13-GM-01; CEQA Status: Project Environmental Impact Report, State Clearinghouse No. 2005092096, Certified on November 15, 2006)

4. PLANNING MATTERS/FOLLOW-UP ITEMS

## a. Review of the Draft Climate Action Plan

Associate Planner Bereket introduced the AECOM consultant representative, Culley Thomas, who has been working on this item with the City.

Mr. Thomas gave a PowerPoint presentation based on the staff report and the draft document. The State of California has encouraged Municipalities to create a Climate Action Plan (CAP). Requirements within this document are not going to be placing any restrictions on existing home or business owners. The primary objectives of this CAP were to develop an emissions inventory, develop reduction measures, and use it for future project streamlining. The City of Lodi Electric Utility Department has already taken steps to reduce the electrical emission and the CAP takes advantage of that. A number of outreach workshops were done such as meetings with stake holders, focus groups, and a booth at the Farmer's Market. One of the incentives the State is providing is the ability to streamline the California Environmental Quality Act (CEQA) requirements for greenhouse emissions for future developments. The Electric Utility Department and the Transit Division are already working to develop a plan to eliminate the City's emissions which helps to take the pressure off of the individual community member. The largest emissions come from electricity and natural gas. In this area the transportation emissions are already under control. Energy/electricity emissions are easier to mitigate than gas.

Chair Jones asked why the energy emissions were so high when we partner with NCPA which is primarily hydro electric. Mr. Thomas stated that it is cleaner, but still is the highest contributor to greenhouse emissions. Jones asked if this will be more stringent than the CARB regulations. Mr. Thomas stated that CARB focuses on big production plants and the CAP focuses on the local developments. Jones stated that CARB has mandates for cars, so is this going to add additional regulations to the diesel vehicles. Thomas stated that this is only focusing on the local development. Associate Bereket stated that there will not be any direct demands placed on individual homeowners and the private sector. Thomas stated that the CAP will take some credit for the reductions that will occur with the state CARB regulations.

Mr. Thomas stated that the emissions projections have been calculated out on the same time line as the growth in the General Plan. The recession has had an obvious impact on the growth and the projections are not going to be accurate for this time. The State regulations are one of the biggest factors in driving down emissions. The increase in renewable energy usage going to thirty-three percent for Investor owned Utilities and now Municipal owned Utilities has played a huge factor in the lower of emissions. Large Hydro is not included in the renewable energy category. The goal was to build on the existing programs offered by the City such as solar and transit.

Chair Jones asked if any money will be trickling down from the state and/or federal level to assist with these programs. Mr. Thomas stated that it isn't clear at this point if there will be any programs to assist with these programs.

Chair Jones asked how the food waste was going to be collected. Mr. Thomas stated that most Cities are combining it with yard waste. Jones asked if Waste Management was on board with this idea. Bereket stated that they have been consulted throughout this process and have been provided with the draft plan.

Commissioner Olson stated that she feels that the document is a plan without any action. She would like to know how the plan streamlines CEQA as an incentive for a builder. Mr. Thomas stated that the community reduction can be used to the advantage of the individual development. Olson stated that it becomes a mitigation measure for them. Thomas agreed. Olson stated that the regulations are voluntary and she would like to see some more muscle put behind them. She added that this seems like a document that is going to be put on a shelf. Olson wanted to know if that is why we chose 2008 as our starting point, we now start off showing a reduction since we haven't had any growth. Mr. Thomas stated that the guideline from the State was to start with a date from 2005 to 2008. Olson asked if the City has taken any action to help with reductions. Joseph Wood, Neighborhood Services

Manager, came forward and stated that the City has been very active in creating an electric fleet and increasing the availability of charging stations.

Vice Chair Kiser asked if the Title 24 regulations are also helping with this. Mr. Wood stated that the voluntary reductions are an added benefit to the regulations that the City is placing on itself. Mr. Wood added that the various codes are separate but any reduction benefits in emissions will be a credit to the plan. The direction that was given by the City Council was to not create any mandatory regulations to the Citizens and try to carry the burden through our own operations.

Commissioner Slater asked if there was any plan to expand the on-bill financing. PG&E offers a program where you can on-bill up to one million and finance it over ten years. The City offers a two year plan and that doesn't give the School District an opportunity to participate.

Deputy City Attorney Janice Magdich asked if the Commission would like to have other staff members here that can address the specific questions. Commissioner Olson stated that she would appreciate that. Ms. Magdich added that the City has three electric charging stations; one at the Library, one at City Hall, and one at the MSC on Ham Lane. The 2013 Building Codes are scheduled to be adopted on the first meeting in November.

Commissioner Olson asked if the composting project had been eliminated. Mr. Thomas stated that the pilot program was discontinued. Mr. Bereket stated that the pilot program ran for about 60 days and was not very successful. Commissioner Slater stated that the School District was attempting to enter into the program, but there was some issue with transporting the product.

Item Opened to the Public for Comment

Planning Commission Secretary

Item 3a

**CITY OF LODI  
PLANNING COMMISSION  
Staff Report**

---

**MEETING DATE:** October 9, 2013

**APPLICATION NO:** Use Permit: 13-U-14

**REQUEST:** Request for Planning Commission approval of a Use Permit to allow a mixed martial arts studio and training facility within an existing industrial building located at 1744 Akerman Drive. (Applicant: Mike Kogan, on behalf of Diaz Ventures, LLC; File 13-U-14; CEQA Determination: Categorical Exemption Pursuant to CEQA Guidelines Section 15332 In-Fill Development Projects)

**LOCATION:** 1744 Akerman Drive  
APN: 062-190-05  
Lodi, CA 95240

**APPLICANT:** Mike Kogan, on behalf of Diaz Ventures, LLC  
5251 Quashnick Road  
Stockton, CA 95212

**PROPERTY OWNER:** Arthur and Linda Hird  
1554 White Oak Way  
San Carlos, CA 94070

**RECOMMENDATION**

Staff recommends that the Planning Commission approve the Use Permit to allow a mixed martial arts studio and training facility within an existing industrial building located at 1744 Akerman Drive, subject to the conditions outlined in the attached resolution.

**PROJECT/AREA DESCRIPTION**

**General Plan Designation:** Industrial  
**Zoning Designation:** Industrial  
**Property Size:** 15,682 sq. ft. (Tenant space is approximately 6,750 sq. ft).

The adjacent zoning and land use are as follows:

ADJACENT ZONING DESIGNATIONS AND LAND USES			
	GENERAL PLAN	ZONE	LAND USE
<b>North</b>	Industrial	Industrial	Mixture of industrial uses
<b>South</b>	Industrial	Industrial	Industrial uses
<b>East</b>	Industrial	Industrial	Industrial uses/Vacant lot
<b>West</b>	Industrial	Industrial	Industrial uses

**SUMMARY**

The applicant requests approval of a Use Permit to occupy vacant industrial building totaling 6,750-square-feet for a mixed martial arts (MMA) studio. The project site is located in the Industrial zoning district, which permits the proposed use. The project site has a General Plan Land Use Designation of Industrial and is zoned Industrial, which permits the proposed use subject to a Use Permit review and approval by the Planning Commission. The project meets all applicable development standards and will not impact existing land uses in the immediate area. As such, staff recommends that the Planning Commission approve the Use Permit request.

## **BACKGROUND**

Diaz Ventures, LLC previously operated a mixed martial arts training facility in the downtown area for approximately five (5) years. Available City records indicate that the building has been used for various industrial type uses since its construction in 1980. In order to accommodate a growing training base, they need additional space and cannot expand at their former location. The proposed location in the industrial district provides the type of space needed for the business. The most recent use was an industrial use and has been vacant for several years.

## **ANALYSIS**

The applicants submitted an application to request Planning Commission approval to establish a mixed martial arts studio at 1744 Akerman Drive .The Studio provides individual and group training sessions for adults. The classes specialize in mixed martial arts skills. There are between 5 and 10 students in a class. Classes are primarily in the evening and on week-ends. The interior of the Studio's space is primarily open consisting of a check-in and waiting area, the main mat area and a warm-up area. There are restrooms, office and storage areas (See Exhibit D). They also have a small retail business selling clothing, equipment, DVDs and similar items used by the students. There are twelve (12) parking spaces provided, including a handicap space (See Exhibit C).

The purpose of a Use Permit is to allow the comprehensive review of sensitive uses and to ensure the proper integration of these uses into the community. These uses may only be suitable in specific locations, and only if such land uses are designed or constructed in a particular manner on a site that are consistent with zoning regulations and with the required findings for a Use Permit outlined in §17.40.040(F) of the City of Lodi Development Code. A Use Permit review allows the opportunity to address any specific issues related to the proposal and to prevent or mitigate any adverse impacts to the surrounding area.

Land Use Compatibility: The project site encompasses approximately 0.36-acre and is developed with 1 industrial shell building measuring 6,750 sq. ft in area. The property is zoned Industrial on the City of Lodi Zoning Map, and is designated Industrial on the General Plan Land Use Map. Surrounding land uses include a combination of industrial type land uses, and various service type uses. The establishment of martial arts studio/facilities within the industrial zoning district requires discretionary review and approval of a Use Permit per Lodi Development Code § 17.24.030.

In reviewing this application for a martial arts training facility within an existing retail suite, staff analyzed the future impacts on adjoining and surrounding land uses. Currently, the project site is surrounded by industrial uses. Each use within the vicinity of the project site has been analyzed for parking demands and hours-of-operation. Staff has determined that the available onsite parking would accommodate the needs the proposed mixed martial arts studio. The proposed martial arts facility would conduct the majority of their business during evening hours from 5:00 p.m. to 10:00 p.m. on weekdays with limited weekend operations. Staff has reviewed the commercial activity in the area and found that a majority of the activity occurs during weekdays, with limited activity in the evening. Staff notes the proposed mixed martial arts facility would be used primarily by the applicant and his associates, who are professional mixed martial art fighters, and would provide individual training sessions to future MMA fighters. Most of the training would occur in the evenings and on the weekends. The applicant previously operated a similar facility in the downtown area without causing parking deficiencies or land use conflict. The martial arts facility's limited hours of operation, and limited training sessions, would not result in a parking deficiency or in land use conflict.

Parking: The parking for the building was constructed per a ratio of 1 space per 750 square feet for general commercial-type uses as prescribed by the old Municipal Code. The current Code requires one space per 1,000 sq. ft. The project site would be required to provide 7 (seven) parking spaces for the proposed use and provides twelve (12) spaces currently. However, the current Development Code stipulates that mixed martial art studios should be viewed on a case by case basis. The

proposed use has been reviewed and analyzed to ensure 'that traffic impacts and parking deficiencies would not arise. Trip generation for the subject use has been determined by staff to be consistent with the overall intensity of development of the site. It should be further noted that the specialized training that occurs on-site limits the number of clients that can use the facilities at any one given time period, ensuring that parking issues within the project vicinity do not arise. It should also be noted that the applicant operated a similar facility in the Downtown for five (5) years with no onsite parking. The applicant's previous facility did not cause traffic or parking issues. In order to further ensure that the use does not intensify in a manner that could contribute to an impact on the City's circulation system, appropriate conditions of approval have been placed upon the Use Permit.

Noise: All fitness activities will occur within the building envelope; therefore, staff does not anticipate any adverse noise impacts upon the surrounding area. If the facility becomes a concern regarding noise, a condition has been added to allow for review of the permit by the Community Development Department or, if needed, returned to the Planning Commission for additional conditions or even revocation of the permit.

Signage: No signage is proposed as part of this application; however, any signage would be required to conform to sign standards established by the Lodi Municipal Code Section 17.34, and would require plan submittal for review and approval by Community Development Department prior to installation.

The discretionary Use Permit procedure enables Planning and other city staff to impose conditions designed to avoid, minimize or mitigate potentially adverse effects of a certain use upon the community or other properties in the vicinity. Staff believes that the Planning Commission can make the required findings, in accordance with Lodi Development Code § 17.40.040(F), to approve the requested Use Permit. The required findings are as follows:

1. *The proposed use is allowed with a Use Permit within the applicable zoning district and complies with all applicable provisions of this Development Code.* **Comment:** The proposed project site is within an existing 6,750-square-foot building located within an Industrial zoning district, which permits martial arts studio subject to Use Permit approval, including any specific condition required for the proposed use in the district in which it would be located. The use conforms to the parking requirement for a martial arts studio. The martial arts facility's limited hours-of-operation and limited parking needs would not result in a parking deficiency.
2. *The proposed use is consistent with the General Plan and any applicable specific plan.* **Comment:** The General Plan land use designation for the project site is Industrial, which permits the proposed use. The facility center is naturally restricted by size and space allocation within the building in a manner that limits occupancy, and will be subject to operational conditions that govern day to day operational aspects necessary to ensure that parking and traffic impacts do not interfere with the primary daytime land uses in the area. The conditions for the restriction of the conditional use are consistent with the General Plan, will not effect neighborhood compatibility; and will not cause the operation of the conditional use to be detrimental to the welfare of persons or properties working, residing, or otherwise existing in the adjacent neighborhood areas.
3. *The location, size, design and operating characteristics of the use or development is compatible with and shall not adversely affect or be materially detrimental to the health, safety, or welfare of persons residing or working in the area, or be detrimental or injurious to public or private property or improvements.* **Comment:** The proposed use is within a 6,750 square feet vacant building. There are no changes to the site and the proposed use is consistent with the Zoning Code and the General Plan policies. As such, the subject site is adequate in size and shape to accommodate the proposed use within an industrial area with all the required off-street parking provided on the subject site. Further, the project will not have a negative effect on the public health, safety, or welfare; or be materially injurious to persons, properties or improvements in the vicinity. The primary activity in the martial arts studio will be limited during

the afternoon and evening hours and on week-ends when some of the nearby businesses will be closed. The martial arts studio will therefore have a minimum impact on other businesses in the center.

4. *The location, size, design, and operating characteristics of the proposed use would be compatible with the existing and future land uses in the vicinity.* **Comment:** The proposed use complies with all requirements as set forth for the issuance of this Use Permit, in that the site is adequate in size, shape and topography for the proposed use, consisting of an existing building. Second, the site is located in a major industrial area that is accessible from public streets. The proposed use did not require the preparation of a traffic study and the traffic generated from the use will not exceed anticipated levels since it is part of a larger industrial project that has been in existence since the 1980s. Existing street networks are adequate in size and shape to accommodate the quantity and quality of traffic generated by the proposed use without any significant impacts to the street system. Third, the proposed use, as conditioned, will not have an adverse effect upon the use, enjoyment or valuation of property in the neighborhood because the proposed use will be located within an existing building with no additions to the footprint of the building.
  
5. *The proposed project has been reviewed in compliance with the California Environmental Quality Act (CEQA) and the Lodi Environmental Review Guidelines.* **Comment:** The project is found to be categorically exempt from CEQA review under 14 CCR §15332. Class 32 consists of projects characterized as in-fill development meeting the following conditions: (a) the project is consistent with the applicable general plan designation and all applicable general plan policies as well as with the applicable zoning designation and regulations, (b) the proposed development occurs within city limits on a project site of no more than five (5) acres substantially surrounded by urban uses, (c) the project site has no value as habitat for endangered, rare or threatened species, (d) approval of the proposed project would not result in any significant effects relating to traffic, noise, air quality, or water quality, and (e) the site of the proposed project can be adequately served by all required utilities and public services.

Staff believes the Commission can make the required findings to approve the Use Permit as proposed. The use of a fitness training studio is appropriate for the proposed location in that it would occupy an existing vacant large scale industrial building. A fitness facility is a use that generally promotes and encourages healthy living within the community. In addition, because the mixed martial arts studio caters to and trains professional mixed martial arts fighters and does not offer group sessions, it would be less likely than an industrial or commercial facility (which was the previous use of the site and is a use that would be open to the general public), to cause any nuisance or enforcement problems within the neighborhood. In staff's opinion, the proposed use would not produce any adverse impacts on the adjacent properties in terms of noise, parking, litter, disorderly behavior, or other objectionable influences. Conditions have been added to mitigate typical concerns related to fitness centers and other similar establishments. If, in the future, concerns arise, and the Director/Police Department determines it necessary, the Use Permit can be subject to review by the Planning Commission to consider the business's operation for compliance with the conditions of the Use Permit. The City further reserves the right to periodically review the area for potential problems

## **ENVIRONMENTAL ASSESSMENT**

The project is found to be categorically exempt from CEQA review under 14 CCR §15332. Class 32 consists of projects characterized as in-fill development meeting the following conditions: (a) the project is consistent with the applicable general plan designation and all applicable general plan policies as well as with the applicable zoning designation and regulations, (b) the proposed development occurs within city limits on a project site of no more than five (5) acres substantially surrounded by urban uses, (c) the project site has no value as habitat for endangered, rare or threatened species, (d) approval of the proposed project would not result in any significant effects relating to traffic, noise, air quality, or water quality, and (e) the site of the proposed project can be adequately served by all required utilities and public services.

**PUBLIC HEARING NOTICE:**

Legal Notice for the Use Permit was published on Saturday, September 28, 2013. Eleven (11) public hearing notices were sent to all property owners of record within a 300-foot radius of the project site as required by California State Law §65091 (a) 3. Public notice also was mailed to interested parties who had expressed their interest of the project.

**ALTERNATIVE PLANNING COMMISSION ACTIONS:**

- Approve with additional/different conditions
- Deny the Use Permit request
- Continue the request

Respectfully Submitted,

Concur,

**RESOLUTION NO. P.C. 13-**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LODI APPROVING A USE PERMIT (13-U-14) TO ALLOW MIXED MARTIAL ARTS STUDIO AND TRAINING FACILITY WITHIN AN EXISTING INDUSTRIAL BUILDING LOCATED AT 1744 AKERMAN DRIVE**

**WHEREAS**, the Planning Commission of the City of Lodi has heretofore held a duly noticed public hearing, as required by law, on the requested Use Permit, in accordance with the Lodi Development Code, Section 17.74; and

**WHEREAS**, the project site is located at 1744 Akerman Drive, Lodi, CA 95240 (APN: 062-190-05); and

**WHEREAS**, project proponent is Diaz Ventures, LLC., 5251 Quashnick Road, Stockton, CA 95212; and

**WHEREAS**, the project property owner is Arthur and Linda Hird, 1554 White Oak Way, San Carlos, CA 94070; and

**WHEREAS**, the property has a General Plan designation of Industrial and is zoned Industrial; and

**WHEREAS**, the requested Use Permit to allow a mixed martial arts studio and training facility within an existing industrial building located at 1744 Akerman Drive; and

**WHEREAS**, pursuant to City of Lodi Zoning Ordinance § 17.74.070, this resolution becomes effective ten (10) business days from its adoption in the absence of the filing of an appeal; and

**WHEREAS**, all legal prerequisites to the adoption of this Resolution have occurred; and

Based upon the evidence within the staff report and project file the Planning Commission finds:

1. The project is found to be categorically exempt from CEQA review under 14 CCR §15332. Class 32 consists of projects characterized as in-fill development meeting the following conditions: (a) the project is consistent with the applicable general plan designation and all applicable general plan policies as well as with the applicable zoning designation and regulations, (b) the proposed development occurs within city limits on a project site of no more than five (5) acres substantially surrounded by urban uses, (c) the project site has no value as habitat for endangered, rare or threatened species, (d) approval of the proposed project would not result in any significant effects relating to traffic, noise, air quality, or water quality, and (e) the site of the proposed project can be adequately served by all required utilities and public services.
2. The proposed project site is within an existing 6,750-square-foot building located within a Industrial zoning district, which permits martial arts studio subject to Use Permit approval, including any specific condition required for the proposed use in the district in which it would be located. The use conforms to the parking requirement for a martial arts studio. The martial arts facility's limited hours-or-operation and limited parking needs would not result in a parking deficiency.
3. The General Plan land use designation for the project site is Industrial, which permits the proposed use. The facility center is naturally restricted by size and space allocation within building in a manner that limits occupancy, and will be subject to operational conditions that govern day to day operational aspects necessary to ensure that parking and traffic impacts do not interfere with the primary daytime land uses in the area. The conditions for the restriction of the conditional use are consistent with the General Plan, will not effect

neighborhood compatibility; and will not cause the operation of the conditional use to be detrimental to the welfare of persons or properties working, residing, or otherwise existing in the adjacent neighborhood areas.

4. The proposed use is within a 6,750 square feet vacant building. There are no changes to the site and the proposed use is consistent with the Zoning Code and the General Plan policies. As such, the subject site is adequate in size and shape to accommodate the proposed use within an industrial area with all the required off-street parking provided on the subject site. Further, the project will not have a negative effect on the public health, safety, or welfare; or be materially injurious to persons, properties or improvements in the vicinity. The primary activity in the martial arts studio will be limited during the afternoon and evening hours and on week-ends when some of the nearby businesses will be closed. The martial arts studio will therefore have a minimum impact on other businesses in the center.
5. The harmony in scale, bulk, coverage and density of the proposed project is consistent with and compatible to the existing and proposed land uses around the subject site, in that the proposed health club facility will be located within an existing building, with no additions or expansions to the approved exterior thereby maintaining the approved scale, bulk, coverage and density of the building with no impacts upon the surrounding neighborhood.
6. The availability of public facilities and utilities is adequate to serve the proposed use, in that the proposed health club facility will be located within an existing building where public facilities and services are provided, including sewer, water, electricity, phone, etc.
7. The subject site will have adequate pedestrian and vehicular circulation and parking available, in that there is an adequate vehicle access point. Pedestrian movements are facilitated by paved and continuous path of travel that connects to the public sidewalk and the sidewalk accesses adjacent properties.

**NOW, THEREFORE, BE IT DETERMINED AND RESOLVED** by the Planning Commission of the City of Lodi that Use Permit Application No. 13-U-14 is hereby approved, subject to the following conditions:

1. The property owner and/or developer and/or successors in interest and management shall, at their sole expense, defend, indemnify and hold harmless the City of Lodi, its agents, officers, directors and employees, from and against all claims, actions, damages, losses, or expenses of every type and description, including but not limited to payment of attorneys' fees and costs, by reason of, or arising out of, this development approval. The obligation to defend, indemnify and hold harmless shall include, but is not limited to, any action to arbitrate, attack, review, set aside, void or annul this development approval on any grounds whatsoever. The City of Lodi shall promptly notify the developer of any such claim, action, or proceeding and shall cooperate fully in the defense.
2. The property owner and/or developer and/or successors in interest and management shall operate the project in strict compliance with the approvals granted herein, City standards, laws, and ordinances, and in compliance with all State and Federal laws, regulations, and standards. In the event of a conflict between City laws and standards and a State or Federal law, regulation, or standard, the stricter or higher standard shall control.
3. The Lodi Police Department, the Planning Commission and/or City Staff may, at any time, request that the Planning Commission conduct a hearing on the Use Permit for the purpose of amending or adding new conditions to the Use Permit or to consider revocation of the Use Permit if the Use Permit becomes a serious policing problem.
4. Music and business related noise shall be maintained at a level that does not disturb neighboring tenants during all hours the martial arts academy is open. No sound may

emanate from the building, uses, or other operations which cause a disturbance or nuisance, or violate City noise standards.

5. The City reserves the right to periodically review the area for potential problems. If problems (on-site or within the immediate area) including, but not limited to, public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace and disorderly conduct result from the proposed land use, the Use Permit may be subject to review and revocation by the City of Lodi after a public hearing and following the procedures outlined in the City of Lodi Municipal Code. Additional reviews may be prescribed by the Community Development Director, the Police Department and/or Planning Commission as needed during and after the first two years of probationary period. Further, starting from the effective date the business commences the sale of wine, this Use Permit shall be subject to a one year, and two year review by the Community Development Director. If the Director determines it necessary, the Director shall forward the review to the Planning Commission to review the business's operation for compliance with the conditions of the Use Permit, and in response to any complaints thereafter.
6. The Use Permit shall be vested within six (6) months from the effective date of approval. A building permit for the tenant improvements allowed under this Use Permit shall have been obtained within six (6) months from the effective date of the Use Permit or the Use Permit shall expire; provided however that the Use Permit may be extended pursuant to the Lodi Municipal Code.
7. The applicant shall adhere to the operations plan approved by the Planning Commission. Any proposed changes to the operation that would intensify the use shall be subject to review by the Planning Commission.
8. Tournament or spectator type events shall not be permitted at the subject site on weekends. Any proposed tournament events shall be subject to a modification to the existing Use Permit.
9. On-site signage shall be allowed in accordance with the standards of the Lodi Municipal Code, and shall be submitted to the Community Development Department prior to installation for review and permitting.
10. The premises shall be kept clean and the operator of the establishment shall insure that no trash or litter originating from the site is deposited outside the tenant space, onto neighboring properties, or onto the public right-of-way. The exterior of all the premises shall be maintained in a neat and clean manner, and maintained free of graffiti at all times. Graffiti shall be removed within twenty-four hours after issuance of a notice of order.
11. The project proponent shall submit a building permit for tenant improvement for review and approval by the Lodi Building and Safety Division. All plan submittals shall be based on the City of Lodi Building Regulations and currently adopted 2010 California Building code. Please review our policy handouts for specific submittal procedures. Some of the code requirements are based on occupant load. Plans shall include accurate occupant load calculations based on square footage divided by the appropriate occupant load factor from 2010 CBC, Table 1004.1.1. In addition, due to occupant load additional plumbing fixtures may be required. Provide separate toilet facilities for each sex and number of plumbing fixtures (water closets, urinals, lavatories, drinking fountains, etc.) as required by 2010 CPC, Section 412 & Table 4-1 and Table A.
12. The California Building Code (Title 24 Section 1134B) requires that existing buildings, when alterations are made, shall be verified for compliance with disabled access requirements. These requirements shall apply only to the specific area of alteration and shall include an accessible entrance, an accessible route to the altered area, at least one accessible restroom for each sex, telephones and drinking fountains (if existing), and when possible additional items such as parking, storage and alarms. If the

construction costs of the alterations to the building are less than the current valuation threshold of \$136,060.00 and if the cost of the above listed accessibility upgrades are disproportionate (exceeds 20% of the project without the upgrades), then the required accessibility upgrades may be provided to the extent that is proportionate (20% of the valuation) as per 2010 CBC, Section 1134B.2.1, Exception 1. In choosing which accessible elements to provide, priority should be given to those elements that will provide the greatest access.

- 13. Provide an active or passive space heating system capable of maintaining a minimum indoor temperature of 68 degrees F at a point 3 foot above the finished floor. 2010 CBC, Section 1204.1.
- 14. The applicant/project proponent and/or developer and/or successors in interest and management shall obtain Operational Permit issued by the Lodi Fire Department, and meet all the conditions outlined in therein. The Fire Department may be contact at the Lodi Fire Department, 25 East Pine Street, Lodi, CA 95240-2127. Phone Number (209) 333-6739.
- 15. In the event the use hereby permitted under this permit is: (a) found to be in violation of the terms and conditions of this permit; (b) found to have been obtained by fraud or perjured testimony; or (c) found to be detrimental to the public health, safety or general welfare, or a public nuisance; this may initiate a revocation procedures in accordance with the City of Lodi Municipal Code.
- 16. A copy of the approved Resolution shall be incorporated into the plans prior to the submittal for plan check. Failure to meet any conditions of approval for this development shall constitute a violation of the Use Permit.
- 17. Any fees due the City of Lodi for processing this Project shall be paid to the City within thirty (30) calendar days of final action by the approval authority. Failure to pay such outstanding fees within the time specified shall invalidate any approval or conditional approval granted. No permits, site work, or other actions authorized by this action shall be processed by the City, nor permitted, authorized or commenced until all outstanding fees are paid to the City.
- 18. No variance from any City of Lodi adopted code, policy or specification is granted or implied by the approval of this resolution.

**Dated: October 9, 2013**

I certify that Resolution No. 13- was passed and adopted by the Planning Commission of the City of Lodi at a regular meeting held on Wednesday, October, 9, 2013 by the following vote:

Item 3b.

**CITY OF LODI  
PLANNING COMMISSION  
Staff Report**

---

**MEETING DATE:** October 9, 2013

**APPLICATION NO:** Use Permit: 13-U-11

**REQUEST:** Request for Planning Commission approval of a Use Permit to establish a ready-mix batch plant at 1560 East Pine Street. (Applicant: Reyes Jaramillo; File No. 13-U-11; CEQA Determination: Categorical Exemption Pursuant to CEQA Guidelines Section 15332 In-Fill Development Projects)

**LOCATION:** 1560 East Pine Street  
APN: 049-090-13  
Lodi, CA 95240

**APPLICANT:** Reyes Jaramillo  
115 South Stockton  
Lodi, CA 95240

**PROPERTY OWNER:** Richard Galantine  
901 South Cherokee Lane  
Lodi, CA 95240

**RECOMMENDATION**

Staff recommends that the Planning Commission approve the request of Reyes Jaramillo, on behalf of Pride Landscape and Concrete, for a Use Permit to establish a batch plant to supplement their landscape business located at 1560 East Pine Street, subject to the conditions in the attached resolution.

**PROJECT AREA DESCRIPTION**

**General Plan Designation:** Industrial  
**Zoning Designation:** Industrial  
**Property Size:** 10 -acres (batch plant would occupy approximately 20,000 sq. ft. area)

The adjacent zoning and land use characteristics:

ADJACENT ZONING DESIGNATIONS AND LAND USES			
	GENERAL PLAN	ZONING CLASSIFICATION	EXISTING LAND USE
North	Industrial	Industrial	industrial use
South	Industrial	Industrial	industrial use
East	County	County	Agricultural use
West	County	County	Cemetery

**SUMMARY**

The applicant, Reyes Jaramillo, on behalf of Pride Landscape, proposes install a small batch plant to complement a nursery and landscape business he operates at 1560 East Pine Street. The business does not include onsite crushing and recycling aggregate products. The batch plant would make ready-mix material for their business. The site is designated for heavy industrial uses, which allows the proposed use subject to a Use Permit review and approval.

**BACKGROUND**

The property currently has two existing structures on the property, a 1,800 square foot building being used as a storage facility and a 800 square foot shed. The parcel contained previously contained a 4,000 square foot building that was damaged due to fire and was removed earlier this year. The property is mostly undeveloped land being used for nursery purposes. The site is vacant and can be served by City utilities.

## PROJECT AND SITE DESCRIPTION

The applicant is proposing to utilize a vacant industrial lot for a ready-mix batch plant located at 1506 East Pine Street. The proposal involves a ready mix concrete batch plant with accessory office, truck and vehicle parking area. The applicant currently operates a nursery and landscape business at this location. The batch plant would complement their business. The equipment used to create the ready-mix material measures approximately 20-ft in height. The adjacent parcel to the east is outside of City limits. Attachment 1 shows the project site in a local setting. There are no sidewalks, curb, gutter or street lights along this frontage. The only machinery involved will ready-mix equipment. The proposed business does not involve retail business and is generally expected to operate Monday through Friday 7:00 am to 6:00 pm every day. The proposed plan is expected to have the following features:

- The tallest component of the plant will be the stack that is approximately 20 feet high.
- No asphalt production will occur.
- 8 full time employee positions will be created
- No crushing/recycling of concrete will occur.

## ANALYSIS

The applicant is seeking Use Permit approval to allow a ready mix concrete batch facility at 1506 East Pine Street. The project site abuts San Joaquin County to the east and a cemetery located within the San Joaquin County to the west. The subject property is currently zoned Industrial and the Land Use Designation. With this request, the applicant is proposing to construct the "Stuart Tarmac Concrete Batch Plant" to complement the landscape business he operates out of this location. The site contains 10-acres, but the ready-mix batch plan would occupy less than 10,000 square foot. The site is proposed to include specifically, a batch plant, a detention pond, and five (5) parking spaces to support the proposed uses. This development is subject to all mandatory on- and off-site improvements such as sidewalk, curb, gutter, street lighting, etc. The business does not involve crushing or recycling of concrete, asphalt or aggregate materials. In addition, the business does not involve production, manufacturing or recycling of asphalt or asphalt based products.

The discretionary Use Permit procedure enables Planning and city staff to impose conditions designed to avoid, minimize or mitigate potentially adverse effects of a certain use upon the community or other properties in the vicinity. Staff finds that the proposed ready-mix batch plant is a reasonable request for the property. The lot is zoned Industrial, a zone specifically designated for the most intense types of industrial uses. The property is currently used for landscaping business. The ready-mix batch plant would supplement the existing business.

Although the ready-mix production process will generate some noise and dust, the levels are not significantly higher than those produced by some of the surrounding businesses. The applicant will be required to obtain operational permits from San Joaquin Valley Air Pollution Control District and comply with all applicable air quality regulations. The proposed business would allow the applicant to expand their business.

Staff finds that the proposed Use Permit application, including conditions in the attached resolution, will meet the requirements of the Zoning Ordinance and are consistent with the General Plan. Staff believes that the Planning Commission can make the required findings to approve the requested Use Permit. The required findings are as followed:

1. *The proposed use is allowed with a Use Permit within the applicable zoning district and complies with all applicable provisions of this Development Code.* **Comment:** The Zoning designation for this property is Industrial, which permits facilities for the sorting, grading, and storage of aggregates as construction materials, such as batch plants subject to a Use Permit per Industrial Zoning District per Lodi Municipal Code Section 17.24.030. It is consistent with the requirements of the Industrial Zoning District. The site is currently being used by the applicant as nursery for their landscape business. The proposed concrete mix plant is classified as an Industrial use – a permitted use within the subject zoning district. The batch plant requires approval of a Use Permit.

The batch plant is intended to compliment the landscape business the applicant currently operates. The business does not involve retail activities out of this location. The tallest structure element of the proposed concrete plan (ready nix equipment) will be 20-ft in height, which is within the maximum

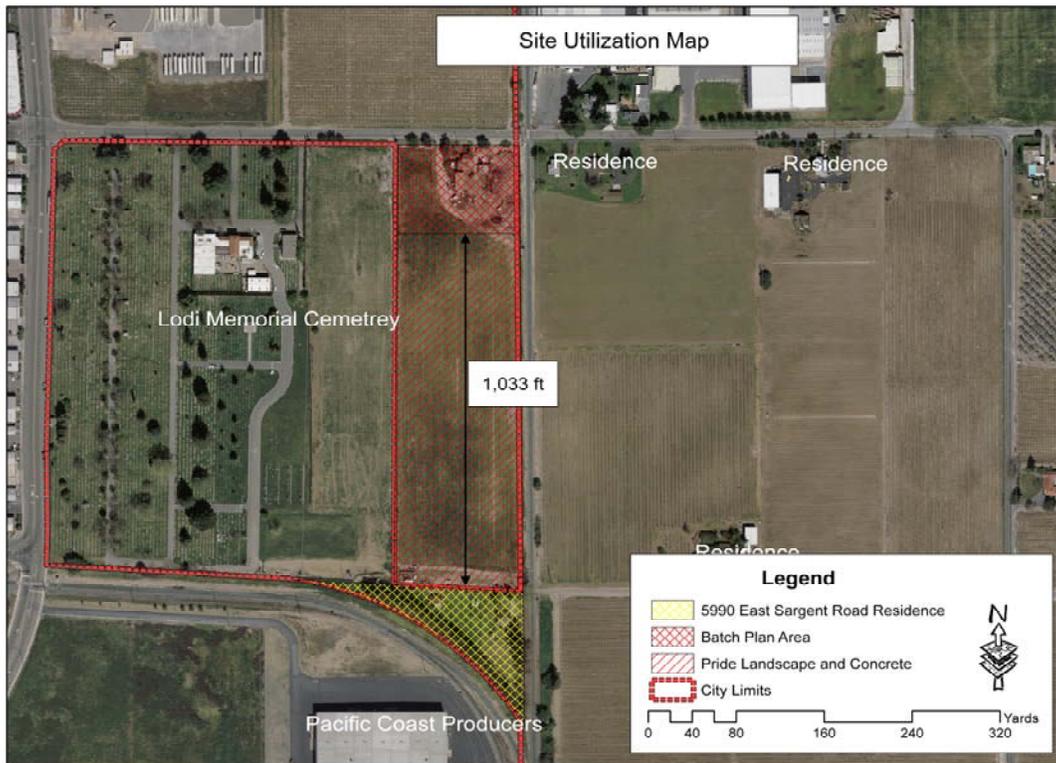

allowable height of 80 feet. The batch plant would occupy an approximately 10,000 square foot of the 10-acre site. Construction of onsite parking, instillation of driveway, and other improvements will improve the property. The site and all properties to the north and east are either zoned or currently in use as heavy industrial uses. The proposed business would be consistent with surrounding industrial uses.

2. *The proposed use is consistent with the General Plan and any applicable specific plan.* **Comment:** The General Plan land use designation for this area is Industrial, which provides for manufacturing facilities such as a batch plant. The proposed batch plant will be similar, if not smaller, than other batch plant located in the same district.
3. *The location, size, design and operating characteristics of the use or development is compatible with and shall not adversely affect or be materially detrimental to the health, safety, or welfare of persons residing or working in the area, or be detrimental or injurious to public or private property or improvements.* **Comment:** The proposed batch plant is compatible with existing and future industrial land uses. The parcel immediately west of the project site is cemetery. The uses immediately south and north are industrial in nature. C.C.T. Railroad separates the project from parcels to the east, which are vacant agricultural uses. Staff recommends a number of standards to ensure safe and orderly operation of the business. These conditions include on- and off- site development of the project site, such as instillation of new driveways, sidewalk, curb, gutter and street lights along Pine Street, fugitive dust control measures, and etc. In addition, the proposed use will not detrimentally affect residential buildings, churches, schools, hospitals, public playgrounds, and other similar uses. No aspects of the proposed uses has been identified that would create new detrimental impacts.
4. *The location, size, design, and operating characteristics of the proposed use would be compatible with the existing and future land uses in the vicinity.* **Comment:** The proposed use complies with all requirements as set forth for the issuance of this Use Permit, in that the site is adequate in size, shape and topography for the proposed use. Second, the site has sufficient access to streets, adequate in width and pavement type to carry the quantity and quality of traffic generated by the proposed use. Lastly, the proposed use, as conditioned, will not have an adverse effect upon the use, enjoyment or valuation of property in the industrial neighborhood because the proposed use is type of business specifically allowed in the Industrial zoning district.
5. *The proposed project has been reviewed in compliance with the California Environmental Quality Act (CEQA) and the Lodi Environmental Review Guidelines.* **Comment:** The project is found to be categorically exempt according to the California Environmental Quality Act, Article 19 §15332, Class 32, In-fill Development. The project site is less than 5 acres, is surrounded by urban uses, can be served by urban services and is not in an environmentally sensitive location.

### Objection Letters

At the time of writing this staff report, staff received 2 letters of objection from nearby property owners. First letter is from Lodi Memorial Cemetery, which is located immediately west of the project site and outside of the City limits. Their primary concern is that the noise the proposed facility will generate could cause disturbance and interfere with their business. As noted above, the proposed project meets the intent of the City's General Plan and Zoning regulations. The industrial zoning district is a district exactly meant for these types of use. The proposed project does not involve a variance or a deviation request from the development standard applicable to the zoning district. The noise generated by the project would be subject to the City's noise ordinance. Although staff understands Lodi Memorial Cemetery's concerns, the cemetery itself is surrounded by industrial uses and land designated for future industrial uses. The noise generated by industrial uses will always exceed residential or commercial noise levels. Their objection letter also notes private conflict they have had with the applicant. These disagreements over property rights are strictly private matters and there is a proper instrument to address these types of issues through the court system.

The second objection letter was written by a resident who lives nearby (also outside of city limits). Their letter raises six concerns. First, they point out that the project site lies 50 yards away from their residence, and related to this point is noise concerns.

As illustrated on **Figure 1** above, their residential parcel abuts the project site parcel. However, it is important to note that the precise location of the ready-mix batch plant equipment is planned to be approximately 330 yards (.19 miles) away from their residence. Their residence is bounded by a Central California Traction Company rail line (C.T.T. Railroad) and Pacific Coast Produce (PCP) warehouse. Both these uses generate noise from stationary (warehouse) and mobile sources (trains and trucks). In staff's opinion, the noise generated by these two uses far exceeds noise that will be generated by the ready-mix batch plant use. Furthermore, it is important to note this proposed batch plant is not an industrial type batch plant. This is a supplemental ready mix plant to compliment the landscape business. As proposed, it is a small part of their business operation plan.

The other concerns relate to water quality, wastewater and use of fertilizers. Project conditions of approval mandate that the project conform to wastewater quality regulations. Conditions of approval require the applicant to connect to City wastewater lines. As depicted on the site plan, the applicant intends to construct a retention basin to control stormwater run-off. Construction of the said retention basin would be subject to a grading permit and is required to fully comply with City standards. With respect to fertilizer use, staff notes it is beyond the scope of this use permit and would not require any city application. Agricultural use, including nursery, is a permitted right and no city ordinance prohibits use of fertilizer for agricultural purposes.

Finally, their last two comments relate to dust and air pollution concerns. As noted elsewhere in this staff report, the project is subject to review and approval by the Valley Air District. Operations of the business would have to comply with the requirements of the Valley Air District. Staff notes a ready-mix batch plant this size will not generate nearly half-as-much air pollution as agricultural and nursery, uses that are permitted by right at this location.

### Conclusion

The proposed project has been reviewed by other City departments. Their requirements have been added to the attached draft resolution. The location and design of the proposed development is consistent with the goals and policies of the 2010 General Plan and the Industrial zoning district. The General Plan Land Use Industrial designation allows such industrial uses at this location. The Industrial zoning district allows nursery by right and allows quarrying material production (batch plant) via a Use Permit.

In staff's opinion, the proposed operation at this location would not create special problems in the area because it is a small component of the landscape business. There is no retail ready-mix material for sale. In addition, the proposed project would provide additional employment opportunities, addressing the

community's concerns related to employment opportunity and help preserve the City of Lodi's economic welfare. It will also provide economic activity to the neighborhood. The proposed facility will be consistent with the goals and objectives as specified in the General Plan for Industrial businesses and put to use an underutilized site that is in need of economic activity. As such, staff recommends that the Planning Commission approve the project, subject to the conditions outlined in the attached resolution.

**ENVIRONMENTAL ASSESSMENTS**

The project is found to be categorically exempt according to the California Environmental Quality Act, Article 19 §15332, Class 32, In-fill Development. The project is less than 5 acres, is surrounded by urban uses, can be served by urban services and is not in an environmentally sensitive location.

**PUBLIC HEARING NOTICE:**

Legal Notice for the Use Permit was published on Saturday, September 28, 2013. Sixteen (16) public hearing notices were sent to all property owners of record within a 300-foot radius of the subject property as required by California State Law §65091 (a) 3.

**ALTERNATIVE PLANNING COMMISSION ACTIONS:**

- Approve the request with attached or alternate conditions
- Deny the request
- Continue the request

RE: File 13-U-11, Reyes Jaramillo

Dear Mr. Bartlam;

We are in receipt of the Notice of Public Hearing on the above case, and will be in attendance at the meeting on Wednesday September 11<sup>th</sup>.

All of the staff here at Lodi Memorial Cemetery is strongly opposed to having a cement batch plant directly adjoining our cemetery property.

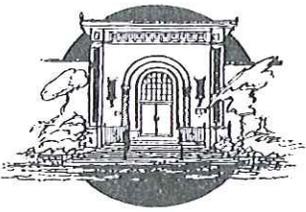

Our reputation, and the requirements of a business such as ours, is for a quite, peaceful and serene setting where families can mourn their losses and spend time in quiet meditation for their loved ones, as well as put their deceased loved ones to rest in this type of quiet and peaceful environment.

Having a cement plant, with trucks coming and going, heavy equipment being operated and the noise they generate will be harmful to our business and disturbing to those who are visiting loved ones interred here or for those who are having graveside services.

The area for the proposed cement plant directly adjoins our property and is where our future growth will take place. We have started that growth recently with the laying of sod for a new burial garden.

*Historic*  
**Lodi Cemetery**

5750 East Pine Street  
Lodi, California 95240  
Phone: (209) 333-7171  
Fax: (209) 365-1359

We ourselves operate no equipment while services are being performed. To help grieving families, on one of the worst days of their lives, we try to eliminate every distracting factor we can and give them a respectful, quiet setting in which to say a final goodbye to their loved ones.

We have already experienced difficulties with the neighbor who is requesting to operate this cement plant. He has not to this point proved himself to be a very good neighbor. Our Grounds Maintenance Superintendent has had to keep him from encroaching his product and equipment onto our property more than once. The family to the south of him has also had problems with him encroaching onto their property.

His intentions and his actions to date have not been one who wished to cooperate and live and work in harmony with his neighbors but rather one who wishes to be in opposition and seeks only his own self interests.

Therefore, we oppose his proposal.

Sincerely,

The Staff of Lodi Memorial Cemetery

Cathy Stieler  
Cemetery Manager CEM 339

**RECEIVED****SEP 10 2013****COMMUNITY DEVELOPMENT DEPT  
CITY OF LODI**

September 9, 2013

Re: Request for Planning Commission approval of a Use permit to establish a batch plant at 1560 East Pine Street.  
(Applicant: Reyes Jaramillo; File 13-U-11: CEQA Determination: Categorical Exemption Pursuant to CEQA  
Guidelines Section 15332 In-Fill Development Projects)

To Community Development Director:

This letter is being written to be AGAINST the proposal for the approval of a Use Permit to establish a batch plant at 1560 East Pine Street. We are owners (Gordon and Cindy Meyers) of the Residence 5990 E. Sargent Road located adjacent to 1560 East Pine Street, the proposed project.

Reasons and concerns against proposal:

- 1) Residence less than 50 yards from proposed batch plant
- 2) Water Reclamation in regards to potential well water contamination
  - a. Currently, no water reclamation in place for watering plants with fertilizer
  - b. Will water reclamation processes and procedures be put in place for batch plant as well as current watering procedures? If so, what will the processes and procedures be in order to prevent contamination?
- 3) Increased noise from batch plant
- 4) Air pollution from batch plant
- 5) Dust from plant
- 6) Will washout processes, procedures and standards be put in place for contamination from batch plant? If so, what will these processes, procedures, and standards be?

Please send all further correspondence in regards to permit proposals for 1560 East Pine Street and other information that may be needed in regards to speaking against this proposal to the following address:

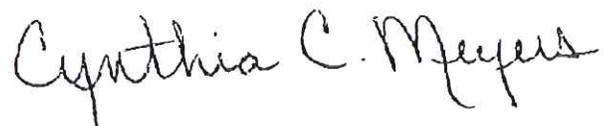

GORDON & CYNTHIA MEYERS  
5990 E. SARGENT ROAD  
LODI, CA 95240  
(209) 200-6054 or (209) 298-4295

Thanks for the consideration,

Gordon Meyers

Cynthia Meyers

**RESOLUTION NO. P.C. 13-**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LODI APPROVING THE REQUEST OF REYES JARAMILLO FOR APPROVAL OF A USE PERMIT TO ESTABLISH A BATCH PLANT AT 1560 EAST PINE STREET**

**WHEREAS**, the Planning Commission of the City of Lodi has heretofore held a duly noticed public hearing, as required by law, on the requested Use Permit, in accordance with the Lodi Municipal Code, Section 17.74; and

**WHEREAS**, the project site is located at 1506 East Pine Street, Lodi, CA 95240 (APN: 049-090-13); and

**WHEREAS**, the project proponent is Reyes Jaramillo, 115 South Stockton Lodi, CA 95240; and

**WHEREAS**, the project properties owner of record is Richard Galantine, 901 South Cherokee Lane, Lodi, CA 95240; and

**WHEREAS**, the property has a General Plan designation of Industrial and is zoned Industrial; and

**WHEREAS**, the requested Use Permit to establish a mixed-ready Batch Plant facility at 1506 E. Pine Street; and

**WHEREAS**, pursuant to the California Environmental Quality Act of 1970, and State Guidelines thereto, the project is found to be categorically exempt according to the California Environmental Quality Act, Article 19 §15332, Class 32, In-fill Development. The project limits are less than 5 acres, have been previously disturbed, is surrounded by urban uses, can be served by urban services and is not in an environmentally sensitive location.

**WHEREAS**, all legal prerequisites to the adoption of this Resolution have occurred; and

Based upon the evidence within the staff report and project file the Planning Commission finds:

1. The project is found to be categorically exempt according to the California Environmental Quality Act, Article 19 §15332, Class 32, In-fill Development. The project is less than 5 acres, is surrounded by urban uses, can be served by urban services and is not in an environmentally sensitive location. A Notice of Exemption was prepared for this project in compliance with the California Environmental Quality Act of 1970, as amended, and the Guidelines provided hereunder.
2. It is found that approval of the Use Permit will result in sound planning practice in that the Use Permit will allow for the orderly use of the site.
3. The Zoning designation for this property is Industrial, which permits a batch plant subject to a Use Permit per Lodi Municipal Code Section 17.24.030.
4. The proposed use is consistent with the General Plan. The General Plan land use designation for this area is Industrial, which permits facilities for the sorting, grading, and storage of aggregates as construction materials, such as batch plants.
5. The location, size, design and operating characteristics of the use or development is compatible with and will not adversely affect or be materially detrimental to the health, safety, or welfare of persons residing or working in the area, or be detrimental or injurious to public or private property or improvements. The proposed batch plant is compatible with existing and future land uses because this subject property is located within the Industrial Zoning District. The surrounding uses are primarily industrial uses. In addition, the proposed use will not detrimentally affect residential buildings, churches, schools, hospitals, public playgrounds, and other similar uses because the project site is not proximate to any churches or hospitals;

and does not directly abut residentially zoned properties, parks, or schools. No aspects of the proposed uses has been identified that would create new detrimental impacts.

6. The location, size, design, and operating characteristics of the proposed use would be compatible with the existing and future land uses in the vicinity. The proposed use complies with all requirements as set forth for the issuance of this Use Permit, in that the site is adequate in size, shape and topography for the proposed use, consisting of an existing building. Second, the site has sufficient access to streets, adequate in width and pavement type to carry the quantity and quality of traffic generated by the proposed use. Third, the characteristics of the proposed batch plant are consistent with various industrial uses located within the vicinity of the project site and throughout the Industrial Zoning District. Lastly, the proposed use will not have an adverse effect on the public health, safety, and general welfare in that the proposed operational conditions and the limited size of the use business will mitigate any potential adverse effects to neighboring properties. The proposed business is a permitted use within the Industrial Zoning District, and the batch plant will be located within an industrial parcel. No conflicts with existing and potential uses have been identified.
7. The proposed use will not create an enforcement problem in that the proposed use is primarily industrial in nature and is properly located in the Industrial zoning district and will continue to operate under a suite of San Joaquin Valley Air Pollution Control District and environmental health and safety measures.
8. The proposed use will not create a demand for public services within the City beyond that of the ability of the City to meet in the light of taxation and spending restraints in that the use is private and does not require any additional public services.
9. The proposed use would not have a substantial adverse economic effect on nearby uses because operation of the proposed business in accordance with applicable laws, and under the conditions of this Use Permit, is anticipated to be an economic benefit to the community.
10. The conditional use is subject to and must comply with specific local conditions and additional regulations as deemed necessary by other regulatory or permit authorities. The approval does not relieve the applicant from an obligation to obtain any state or federal permits for concrete recycling facilities.

**NOW, THEREFORE, BE IT DETERMINED AND RESOLVED** by the Planning Commission of the City of Lodi that Use Permit Application No. 13-U-11 is hereby approved, subject to the following conditions:

1. The property owner and/or developer and/or successors in interest and management shall, at their sole expense, defend, indemnify and hold harmless the City of Lodi, its agents, officers, directors and employees, from and against all claims, actions, damages, losses, or expenses of every type and description, including but not limited to payment of attorneys' fees and costs, by reason of, or arising out of, this development approval. The obligation to defend, indemnify and hold harmless shall include, but is not limited to, any action to arbitrate, attack, review, set aside, void or annul this development approval on any grounds whatsoever. The City of Lodi shall promptly notify the developer of any such claim, action, or proceeding and shall cooperate fully in the defense.
2. The property owner and/or developer and/or successors in interest and management shall operate the project in strict compliance with the approvals granted herein, City standards, laws, and ordinances, and in compliance with all State and Federal laws, regulations, and standards. In the event of a conflict between City laws and standards and a State or Federal law, regulation, or standard, the stricter or higher standard shall control.
3. The property owner and/or developer and/or successors in interest and management shall submit a building permit within thirty (30) days, from the effective date of the approval, to bring the property up to Code.

4. The applicant shall install public improvements such as curb, gutter, sidewalk, a curb return and repair or replace all damaged or below City standards roadway along the entire Pine Street frontage.
5. All existing driveways shall be replaced with new commercial driveways conforming to City Standard Plans 114.
6. One 24" box evergreen tree shall be planted for every 15-20 lineal feet of street frontage to provide screen. Spacing of the trees is dependant on the species of trees. Trees shall be planted according to City Standards.
7. The ready-mix batch plant shall be limited to the area depicted in Exhibit A attached to this resolution.
8. The applicant shall submit landscape and irrigation plans to the Community Development Department for review and approval. Landscape improvements shall be installed according to the approved plans and shall comply with the City's Water Efficient Landscape Ordinance.
9. The applicant shall install parking spaces for the proposed office building. The parking space shall conform to the City's Parking Standards. All designated vehicle circulation driveways and parking areas depicted on the site plan shall remain clear, open and unobstructed at all times.
10. The facility shall be maintained so as to prevent or control on-site population of vectors using techniques appropriate for protection of human health and the environment and prevent the facility from being a vector breeding area.
11. The Use Permit shall be vested within six (6) months from the effective date of approval. A building permit for the tenant improvements allowed under this Use Permit shall have been obtained within six (6) months from the effective date of the Use Permit or the Use Permit shall expire; provided however that the Use Permit may be extended pursuant to the Lodi Municipal Code.
12. The applicant shall obtain a building permit for the proposed project. All plan submittals shall be based on the City of Lodi Building Regulations and currently adopted 2010 California Building Code (CBC). Please review our policy handouts for specific submittal procedures. The Building and Safety Division may be contacted at 221 West Pine Street, Lodi, CA 95240-2127. Phone number (209)333-6714.
13. Plans shall include all interior and exterior accessibility requirements as specified by the 2010 CBC. **Note:** The 2010 CBC, Section 1133B.1.1.1.1 requires all entrances and ground-floor exit doors to building and facilities shall be accessible to persons with disabilities and shall be connected by an accessible route to the public way and accessible parking spaces. Project plans must illustrate the accessible path of travel from the doors to the accessible parking spaces and the public way or to an area of safe dispersal in compliance with 2010 CBC. Further, plans to specify walkways and sidewalks along accessible routes of travel (1) are continuously accessible, (2) have maximum 1/2" changes in elevation, (3) are minimum 48" in width, (4) have a maximum 2% cross slope, and (5) where necessary to change elevation at a slope exceeding 5% (i.e., 1:20) shall have ramps complying with 2010 CBC, Section 1133B.5. Where a walk crosses or adjoins a vehicular way, and the walking surfaces are not separated by curbs, railings or other elements between the pedestrian areas and vehicular areas shall be defined by a continuous detectable warning which is 36" wide, complying with 2010 CBC, Section 1133B.8.5. 2010 CBC, Sections 1133B.1.1.1.1, 1127B.1.
14. The applicant shall obtain an Operational Permit from the Lodi Fire Department, Fire Prevention Bureau. The Operational Permit shall be obtained prior to commencement of sale of business. The Fire Department may be contacted at 25 East Pine Street, Lodi, CA 95240-2127. Phone Number (209) 333-6739.
15. No queuing on public right of way shall be permitted.
16. The site shall be maintained free of litter and any other undesirable materials and shall be cleaned of loose debris on a daily basis. The applicant, operator, manager and successor's

interest in management shall be responsible for picking up all litter and waste material within any public or private right-of-way within 300 feet of the tenant space boundaries.

17. Project applicant shall obtain approvals from the Air Quality District and shall maintain a valid Permit to Operate issued by the San Joaquin Valley Air Quality Management District (AQMD) for the duration of the project.
18. All public improvements including, but not limited to, installing curb, gutter, sidewalk, undergrounding of electrical poles and replacement of all damaged or below city standard roadway along Pine Street. Subject to approval by the City Council, the applicant may apply for a deferred improvement agreement for the public improvements at a cost of \$1,947.
19. All new development is required to perform best management practices (BMP) as required in the City Stormwater Development Standard Plans (DSP). The project must include measures to mitigate the pollutants of concern listed in the DSP. The building plans must include the mitigation measures prior to Public Works approval.
20. All new development is required to perform best management practices (BMP) as required in the City Stormwater Development Standard Plans (DSP). The project must include measures to mitigate the pollutants of concern listed in the DSP. The building plans must include the mitigation measures prior to Public Works approval. A copy of the DSP is available from Public Works and is posted on the City's website.
21. All project design and construction shall be in compliance with the Americans with Disabilities Act (ADA). Project compliance with ADA standards is the developer's responsibility.
22. Payment of the following prior to building permit issuance unless noted otherwise:
  - I. Filing and processing fees and charges for services performed by City forces per the Public Works Fee and Service Charge Schedule.
  - II. Development Impact Mitigation Fee at the time of occupancy.
  - III. Regional Transportation Impact Fee (RTIF) at the time of building permit issuance.
23. An encroachment permit issued by the Public Works Department is required for the following work:
  - I. All work within Pine Street right-of-way including, but not limited to, curb, gutter, sidewalk, a curb return, driveway entrances and all damaged or below city standard roadway improvements.
24. All future external lighting, whether installed for security, safety or landscape design purposes, shall be shielded, downcast or shall be positioned in a manner that will not shine or allow light glare to exceed the boundaries of the parcel on which it is placed.
25. The access road, driveway and interior circulation routes shall be maintained in such a manner as to ensure minimum dust generation subject to regulations of the Air Quality Management District (AQMD). Any rock material used for surfacing must comply with AQMD regulations regarding asbestos content. All grading activities shall comply with Regulation 1, Rule 4300 (Fugitive Dust Emissions).
26. This permit is subject to the securing of all necessary permits for the proposed development and eventual use from County, State and Federal agencies having jurisdiction. Any requirements imposed by an agency having jurisdiction shall be considered a condition of this entitlement.
27. In the event that archaeological resources are encountered on the site, further disturbance in the immediate vicinity of the find shall be halted until all requirements of the City of Lodi Municipal Code.
28. Any equipment used for the business shall comply with the Noise Ordinance. If complaints are received and verified by the City regarding noise from equipment associated with the facility, the applicant/operator and/or successors in interest and management shall mitigate and/or make

any necessary modifications so noise levels comply with acceptable standards identified in the City's General Plan.

- 29. Noise levels shall not exceed sixty-five (65) dBA, as measured from the outside wall of the building envelop. The business hours of operation shall be from 7:00 a.m. to 6:00 p.m., Monday through Sunday, unless modified in writing and approved by the Planning Division. All business related to the facility, including removal recyclable materials shall be within these approved hours.
- 30. In the event the use hereby permitted under this permit is: (a) found to be in violation of the terms and conditions of this permit; (b) found to have been obtained by fraud or perjured testimony; or (c) found to be detrimental to the public health, safety or general welfare, or a public nuisance; this permit shall be subject to the revocation procedures in accordance with the City of Lodi Municipal Code.
- 31. At all times during the conduct of the use(s) allowed by this permit, the use(s) shall maintain and keep in effect valid licensing from appropriate local, state and/or federal agencies as required by law. Should such required licensing be denied, expire or lapse at any time in the future, this permit shall become null and void.
- 32. Any sign(s) shall require a building permit from the Community Development Department. Said sign(s) shall be in full compliance with the City of Lodi Sign Ordinance and any applicable master sign program for the subject site.
- 33. If operation of this use results in conflicts pertaining to parking, noise, traffic, or other impacts, at the discretion of the Community Development Director, this conditional use permit may be referred to the Planning Commission for subsequent review at a public hearing. If necessary, the Commission may modify or add conditions of approval to mitigate such impacts, or may revoke said conditional use permit bound upon applicable findings.
- 34. Any fees due the City of Lodi for processing this Project shall be paid to the City within thirty (30) calendar days of final action by the approval authority. Failure to pay such outstanding fees within the time specified shall invalidate any approval or conditional approval granted. No permits, site work, or other actions authorized by this action shall be processed by the City, nor permitted, authorized or commenced until all outstanding fees are paid to the City.
- 35. No variance from any City of Lodi adopted code, policy or specification is granted or implied by this approval.
- 36. Additional comments and conditions will be provided in conjunction with the approval of a building permit for this project.

**Dated: October 9, 2013**

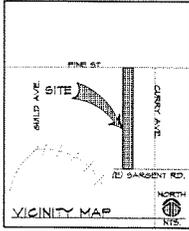

I certify that Resolution No. 13- was passed and adopted by the Planning Commission of the City of Lodi at a regular meeting held on October 9, 2013 by the following vote:

**CITY OF LODI  
PLANNING COMMISSION  
Staff Report**

---

**MEETING DATE:** October 9, 2013

**APPLICATION NO:** Subdivision Application: 13-S-01  
Growth Management Allocation: 13-GM-01

**REQUEST:** Request for Planning Commission approval of:  
 a) Growth Management Allocation for 232 Low Density Residential Lots; and  
 b) A Vested Subdivision Map for the Proposed Rose Gate Subdivision, a 50 acre, 232 lot, single-family residential subdivision  
 c) Adopt Development Standards for the subdivision known as Rose Gate Subdivision located within Planned Development 42 Zoning District.  
 (Applicant: FCB Homes, Inc.; File #'s: 13-S-01 and 13-GM-01; CEQA Status: Project Environmental Impact Report, State Clearinghouse No. 2005092096, Certified on November 15, 2006)

**LOCATION:** 2875 West Lodi Avenue  
APN: 029-380-05  
Lodi, CA 95240

**APPLICANT:** FCB Homes  
10100 Trinity Parkway, Suite 420  
Stockton, CA 95219

**PROPERTY OWNER:** Georgia Perlegos, ETAL  
P. O. Box 1823  
Lodi, CA 95241

**RECOMMENDATION**

Staff recommends that the Planning Commission recommend to the City Council approval of the request of FCB Homes for 232 low-density growth management allocations and a vesting subdivision map for the proposed Rose Gate Subdivision to be located at 2875 West Lodi Avenue, subject to conditions in the attached resolution.

**PROJECT/AREA DESCRIPTION**

**General Plan Designation:** Low Density Residential  
**Zoning Designation:** Planned Development 42 (PD-42)  
**Property Size:** 49.74 acres (2,166,674.40 sq ft. sq. ft.)

The adjacent zoning and land use characteristics:

	ADJACENT ZONING DESIGNATIONS AND LAND USES		
	GENERAL PLAN	ZONING CLASSIFICATION	EXISTING LAND USE
<b>North</b>	Low Density Residential	Low Density Residential (LDR)	Residential
<b>South</b>	Low Density Residential Medium Density Residential Commercial	Planned Development 36 (PD-36) Planned Development 42 (PD-42)	Vacant land Shopping Center
<b>East</b>	Low Density Residential	Low Density Residential (LDR) Planned Development 29 (PD-29)	residential
<b>West</b>	San Joaquin County	San Joaquin County	Agricultural use

## **SUMMARY**

The proposed vesting subdivision map seeks to create 234 lots on 49.74 acres resulting in an overall density of 4.7 dwelling units per acre (du/ac), which is far below the density range (2-8 du/ac) specified in the General Plan for the site. The lot sizes range from a minimum of 4,000 square feet to over 16,557 square feet, with the average being 6,000 square feet. The subdivision is designed to provide lot sizes that are comparable to the existing surrounding lots on the north and provide a variety house designs. The approved map also includes a 4.8-acre pocket park with a detention basin. The project site is located at the northwest corner of Lodi Avenue and Lower Sacramento Road, and is bounded on the north by Woodbridge Canal District (WID) Canal. The subdivision will be accessed from three points on Lodi Avenue.

## **BACKGROUND**

The City of Lodi adopted the General Plan and certified the project EIR, State Clearinghouse No. 2005092096, on March 21, 2007. The Project EIR was prepared as a program-level EIR, pursuant to Section 15168 of the CEQA Guidelines (Title 14, California Code of Regulations, Sections 15000 *et seq.*). The project site was annexed into the City as part of the Westside Subdivision, which measured approximately 160 acres. It was annexed into the City limits as part of the Westside Reorganization (Ordinance: Res. 2007-49) on March 21, 2007. In addition, the applicant and the City entered into a Development Agreement which established residential yearly allocation under the Growth Management Program, land use regulations fees and assessments, and infrastructure.

In December of 2006, the City entered into the first of two Development Agreements with FCB Homes. The City and FCB Homes executed Southwest Gateway Development Agreement first and, in April 2007, the Westside project Development Agreement was executed. On August 1, 2012, the City Council, at the request of the applicant, annulled the previously approved Development Agreement. This was done partially due to the fact the City has since adopted a new General Plan and impact fee program.

The City Council directed staff, as part of the overall City Council Goals and Strategic Plan, to conduct a comprehensive review of the Growth Management Plan (GMP), including a possible focus on expiring some of the unused units that have accumulated over the years due to the decline in residential construction activity. On May 15, 2013 the City Council approved the suspension of the GMP (see Attachment D staff report and resolution). As noted in the City Council staff report, the surplus allocations render the application schedule unnecessary.

On June 17, 2013, FCB Homes submitted an application for the Rose Gate Subdivision project, which included a Vesting Tentative Subdivision Map and review of the development standards for the Planned Development Unit.

## **ANALYSIS**

Existing Conditions: The subject site consists of a vacant 50-acre triangular parcel located at 2875 West Lodi Avenue. It is bounded by Lodi Avenue to the south, Woodbridge Irrigation District Canal (WID) to the north, and San Joaquin County limits to the west. The parcel represents 50 acres of the 151 acre "Westside Project" annexed into the City in 2007. Surrounding land uses include vacant land to the south and west; commercial uses to the south; and residential uses to the north. Surrounding areas to the west are within the San Joaquin County jurisdictional limits. The topography of the site is relatively flat and generally sloped from north to southwest. Grassland habitat makes up the entire site.

Vesting Subdivision Map: The proposed Vesting Tentative Map would subdivide the project parcel into low density residential single-family lots and park/detention basin parcels. The approximately 50-acre property would be subdivided into approximately 232 single-family units, a park/retention basin, roadways and other infrastructure required to support the proposed development. Lot sizes would

range from 4,000 sq. ft. to 16,557 sq. ft., with an average lot size being 6,000 sq. ft. The development was separated into 3 "villages" with varying densities and housing types specified for each village.

The Planning Commission is embodied to review the vesting tentative map and recommend approval or denial of the vesting map to the City Council. If the Commission approves, a Final Map for a subdivision of five or more parcels must be prepared, filed, processed and recorded as set forth in Chapter 17.54 (Parcel Maps and Final Maps), to complete the subdivision. The City Council has a final say on the approval or disapproval of the vesting tentative map.

In accordance with Lodi Municipal Code Section, 17.52.130, an approved Tentative Map is valid for 24 months after its effective date (Section 17.66.130). At the end of 24 months, the approval shall expire and become void unless, the applicant petitions the Planning Commission for an extension and the Commission grants an extension in accordance with Lodi Municipal Code Section 17.52.130 (B)(1).

Access and Circulation: Three separate access points are proposed for the subdivision. All three access points would be located along West Lodi Avenue. The overall design incorporates good internal connectivity with all internal streets connecting to Lodi Avenue. The layout of the streets includes one court/dead end driveway. An approximately 4.8-acres detention basin with a community park intended for stormwater compliance is proposed at the middle of the subdivision. The project will reconstruct/construct north side improvements for Lodi Avenue. A key element of Lodi Avenue expansion is a roundabout, which will be centrally located at the main entrance of the project site. The roundabout in Lodi Avenue must be fully constructed with the first phase of development including the street intersection to the south, full landscape improvements, full sidewalk improvements and a transition (including sidewalk and landscape improvements) from the roundabout easterly to the existing improvements. Reconstruction/construction of Lodi Avenue will also include a modification to the existing configuration, eliminating the current ability for left-in or out movements from the eastern most Raley's parking lot access nearest the fuel station.

General Plan Compliance: The project site carries a General Plan Land Use designation of Low Density Residential. The proposed exclusively low density residential project is consistent with the current General Plan (2010) land use designation. The Low Density Residential designation mandates density ranges between two (2) to eight (8) units per acre. Further, the General Plan Land Use Policy 3 (LU P3) prohibits development at less than the minimum and maximum density prescribed by each residential land use category. The proposed project gross density of 4.7 units per acre does comply with applicable General Plan density requirements.

Zoning Compliance: The project site is zoned Planned Development 42 (PD-42). Planned Development zoning designations provide flexibility in the application of development standards that will produce development projects of superior quality, including retention of unique site characteristics, creative and efficient project design, etc., than would have been achieved through strict application of the development standards required by the primary zoning district. The proposed project is divided into three distinct areas called villages.

Village I would be located east of the central park. Lot sizes range in size from 4,320 sq. ft. to 4,560 sq. ft. These lot sizes provide compact designs in traditional neighborhood settings. Site coverage would range from fifty-five (55) percent for two story house to sixty (60) percent maximum for single story houses. Each house will have at least a two-car garage. Garages would maintain twenty (20) feet setback and houses/living spaces would maintain fourteen (14) feet setback.

The Village II area would be located on the southwestern part of the project, closer to Lodi Avenue. Lots range in size from 5,000 sq. ft. to 5,500 sq. ft. The lots would accommodate a variety of single-story and two-story home designs. Site coverage would range from fifty (50) percent for two story house to sixty (60) percent maximum for single story houses. Each house will have a minimum of two-

car garage. Garages would maintain twenty (20) feet setback and houses/living spaces would maintain fifteen (15) feet setback.

The Village III area would be located on northern part of the project. The parcels range in size from 6,000 sq. ft. to 7,500 sq. ft., with even larger parcels scattered throughout this area. The lots in this area are the largest lots and will provide for an increased variety of architectural design and variation of the street scene and greater opportunity for ranch style single-story homes. Site coverage would range from fifty (50) percent for two story house to sixty (60) percent maximum for single story houses. Each house will have at least a two-car garage. Garages would maintain twenty (20) feet setback and houses/living spaces would maintain fifteen (15) feet setback.

Elevations

As depicted in the development plans, the applicant is proposing to use several different elevation styles throughout the subdivision. The elevations use varying massing and architectural articulations. In addition, the subdivision is expected to allow custom homes and other builders to build homes at the project site, which will add architectural variations. Staff believes that the proposed design will provide not only an attractive streetscape, but interesting views from neighboring property owners as well.

Landscape and Fencing: The project also includes a preliminary landscape plan that generally places one large street tree in each front yard among other accent landscaping including various shrubs, ground cover and lawn. A decorative six foot masonry wall along Lodi Avenue has been proposed. The applicant has submitted preliminary landscaping and fencing plans for the subdivision. This includes a perimeter decorative sound wall along Lodi Avenue. In order to create pedestrian friendly landscape features, no more than 55% of the front and street side required minimum setback on standard rectangular lots may be paved with hardscape materials such as concrete or asphalt. Permeable paving or pavers do not count toward the maximum hardscape criteria. Hardscape design flexibility will be allowed for narrow frontage lots (e.g. bulb shaped and cul-de-sacs) and flag lots in excess of the 55% limitation. The landscaping plan would have to comply with the requirements of the Lodi Municipal Code Section 17.03.070 which regulate landscape water efficiency.

Growth Management Compliance: The allocation system gives priority through point assignments to projects that reduce impacts on services, infrastructure, and resources. The ordinance sets an annual growth limit of two percent of the City's population, compounded annually. Once the amount of allocation units is figured, the City requires that the allocation units be distributed among housing types as follows; 65 percent low density, 10 percent medium density and 25 percent high density. For example, the following explains the 447 units available for 2013:

1. Calculate two percent of the City's current population: **62,930 x 2% = 1,258.6**
2. Divide 1,259 by the average number of persons per household 1,259/2.812 = 447.72
3. Divide the 447.72 (448 du) units into the 3 housing types:
  - 65% low density = 291 units
  - 10% medium density = 45 units
  - 25% high density = 112 units

As mentioned above, the City Council earlier this year expired allocations accumulated since 2008. In the five-year period since 2008, 2,235 allocations were added to the reserve. The Council eliminated 800 Low Density and 1,435 High Density allocations. This Council action created a new balance of 4,634 as detailed below in Table A.

**Table A: Growth Management Allocation History**

Density	Available Allocations		
	Total Available for 2012	2%Allocations for 2013	Total Available for 2013
Low (0.1-7)	2,995	291	3,286
Medium (7.1-20)	557	45	602
High (20.1-30)	1,122	112	1,234
<b>TOTAL</b>	<b>4,634</b>	<b>448</b>	<b>5,122</b>

As indicated above in the background discussion, the present project is being reviewed for growth management allocations for 2013. The project received allocations through a Development Agreement that has since been annulled. The applicant has submitted an application for a total of 232 low density growth management allocation units (0.1-7 units/acre). There are 291 low density allocation units allocated for 2013; however, the City also has low density growth management units that were not issued in prior years as shown in **Table A** above, this leaves 2,995 low density units available for allocation from previous years. The 291 low density allocations available for 2013 are sufficient to provide for the proposed project.

Common areas

The subdivision proposes to create several lots with shared access facilities. Staff has added a condition to ensure adequate provisions are created to govern common areas, that front and street side yard landscape continue to be well designed and maintained. In addition, the conditions of approval require the applicant to annex in to the existing facility district.

Conclusion

Staff sent a copy of the application to various City departments for review and comment. Their comments and requirements have been incorporated into the attached resolution. As with all residential subdivisions that rear to a street, the City requires a reverse frontage wall and landscaping along Lodi Avenue. This project is conditioned to provide a right-of-way dedication at the Lodi Avenue frontage along the back of lots 78 to 164. The additional right-of-way contains the curb, landscaping, meandering sidewalk, and an 6-foot tall decorative masonry wall. Staff is also recommending the standard residential street design, which includes tree-lined parkways. Given that the Rose Gate vesting tentative subdivision map is in substantial compliance with applicable City polices, staff finds the subdivision appropriate and timely.

Staff believes that the Commission can make the findings in order to approve the proposed project, subject to conditions outlined in the attached resolution. The proposed vesting tentative map, as described in the code compliance sections above, is consistent with the current General Plan (2010). The proposed exclusively residential development aligns with the residential land use designations and densities assigned to site in the current General Plan. The site for the proposed subdivision is suitable for the density and type of development proposed in that it is a flat piece of land. Also the design of the subdivision and type of improvements would not conflict with easements, acquired by the public at large, for access through or use of the property within the proposed subdivision in that there are no existing public access easements on the site. Further, as stated in the code compliance sections above, the applicant has proposed development standards for this subdivision that are generally consistent with recent subdivisions in the City.

**ENVIRONMENTAL ASSESSMENT**

The project is subject to the requirements of the California Environmental Quality Act (CEQA). All potentially significant environmental impacts were publicly disclosed and made available for comment via Lodi Annexation Environmental Impact Report, State Clearinghouse No. 2005092096, dated April 2006, prior to any decisions to approve any part of the whole project. On March 21, 2007, the City

Council adopted Lodi Annexation Environmental Impact Report, State Clearinghouse No. 2005092096, and Mitigation and Monitoring Plan that analyzed environmental impact aspects of the proposed project.

**PUBLIC HEARING NOTICE:**

Legal Notice for the Use Permit was published in the Lodi News Sentinel on Saturday, September 29, 2013. One hundred and ninety-two (192) public hearing notices were sent to all property owners of record within a 300-foot radius of the subject property as required by California State Law §65091(a) 3.

**ALTERNATIVE PLANNING COMMISSION ACTIONS:**

- Approve the request with attached or alternate conditions
- Deny the request
- Continue the request

Respectfully Submitted,

Concur,

Immanuel Bereket  
Associate Planner

Konradt Bartlam  
Community Development Director

ORDINANCE NO. 1877

AN UNCODIFIED ORDINANCE OF THE CITY COUNCIL OF THE  
CITY OF LODI REVISING THE GROWTH MANAGEMENT  
ORDINANCE BY EXPIRING UNUSED ALLOCATIONS AND  
SUSPENDING THE APPLICATION SCHEDULE SET FORTH IN  
RESOLUTION NO. 2006-141 THROUGH DECEMBER 31, 2019

WHEREAS, the Lodi City Council adopted Ordinance No. 1521 in 1991 establishing a Growth Management Plan for residential development within the City of Lodi; and

WHEREAS, the Ordinance sets an annual growth limit of two percent of the City's population, compounded annually, and once the amount of allocation units are figured, the City requires that the allocation of units be distributed among housing types as follows: 65 percent low density, 10 percent medium density, and 25 percent high density; and

WHEREAS, with nearly 7,000 unallocated units, there is nearly double the amount allocated during the initial 23 years of the program; and

WHEREAS, staff's recommendation is to expire the allocations that have been added since 2008, and that this be done across two of the three density categories with High Density Residential taking the majority; and

WHEREAS, staff recommends that the following allocations be eliminated, leaving a balance of 4,634:

- 800 Low Density; and
- 1,435 High Density allocations; and

WHEREAS, Resolution No. 2006-141 sets forth an application schedule for developers to apply for Growth Management Allocations; and

WHEREAS, the surplus of allocations will render the application schedule unnecessary through the life of the current Development Impact Mitigation Fee Program (December 31, 2019).

**BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF LODI AS FOLLOWS:**

**SECTION 1.**

- 1) That all allocations since 2008 be expired, eliminating the following allocations:
  - a) 800 Low Density; and
  - b) 1,435 High Density allocations; and
- 2) That the remaining balance of allocations (not including 2013 allocations which have yet to be calculated) be as follows:

a.	2,955 Low Density	)	
b.	557 Medium Density	)	
c.	1,122 High Density	)	
			<b>4,634 Total Allocations</b>

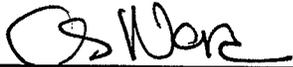

3) That the current application schedule set forth in Resolution No. 2006-141 be suspended until December 31, 2019.

SECTION 2. No Mandatory Duty of Care. This ordinance is not intended to and shall not be construed or given effect in a manner which imposes upon the City, or any officer or employee thereof, a mandatory duty of care towards persons or property within the City or outside of the City so as to provide a basis of civil liability for damages, except as otherwise imposed by law.

SECTION 3. Severability. If any provision of this ordinance or the application thereof to any person or circumstances is held invalid, such invalidity shall not affect other provisions or applications of the ordinance which can be given effect without the invalid provision or application. To this end, the provisions of this ordinance are severable. The City Council hereby declares that it would have adopted this ordinance irrespective of the invalidity of any particular portion thereof.

SECTION 4. This uncodified ordinance shall be published one time in the "Lodi News-Sentinel," a daily newspaper of general circulation printed and published in the City of Lodi, and shall take effect 30 days from and after its passage and approval.

Approved this 5<sup>th</sup> day of June, 2013

  
\_\_\_\_\_  
ALAN NAKANISHI  
Mayor

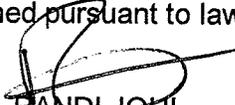

Attest:  
  
RANDI JOHL  
City Clerk

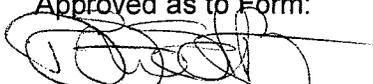

-----  
State of California  
County of San Joaquin, ss.

I, Randi Johl, City Clerk of the City of Lodi, do hereby certify that this uncodified Ordinance No. 1877 was introduced at a regular meeting of the City Council of the City of Lodi held May 15, 2013, and was thereafter passed, adopted, and ordered to print at a regular meeting of said Council held June 5, 2013, by the following vote:

- AYES: COUNCIL MEMBERS – Hansen, Johnson, Katzakian, Mounce, and Mayor Nakanishi
- NOES; COUNCIL MEMBERS – None
- ABSENT: COUNCIL MEMBERS – None
- ABSTAIN: COUNCIL MEMBERS – None

I further certify that Ordinance No. 1877 was approved and signed by the Mayor on the date of its passage and the same has been published pursuant to law.

  
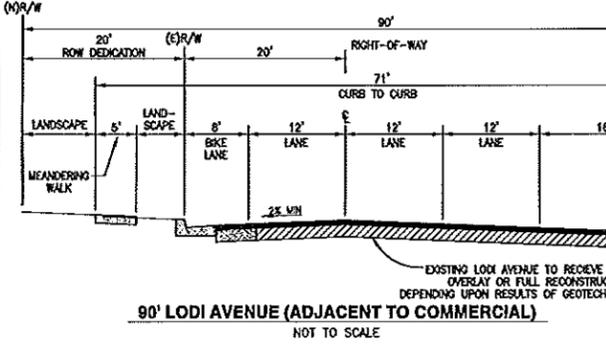

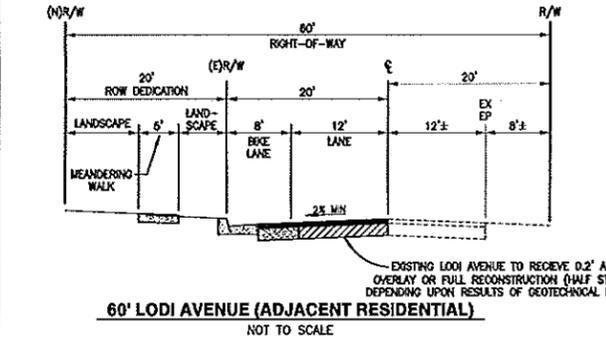

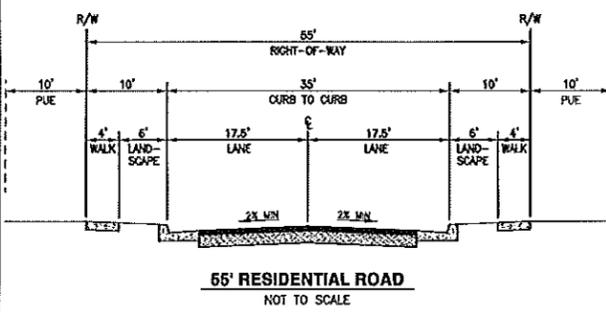

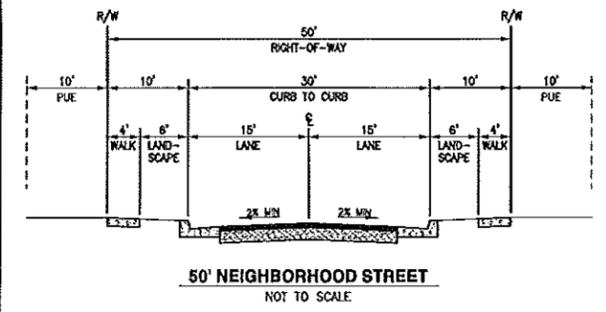

RANDI JOHL  
City Clerk

Approved as to Form:

*More than any other flower,  
we hold the rose dear  
as a symbol of life and love  
and devotion,  
of beauty and eternity.*

-President Ronald Reagan

## 1.0 INTRODUCTION

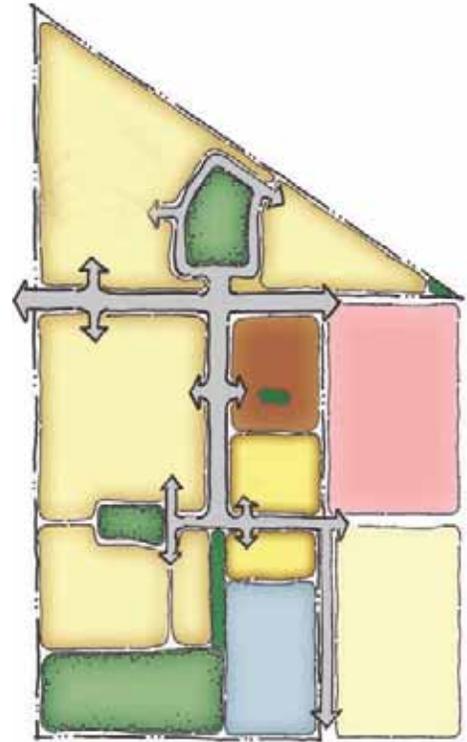

### 1.1 LOCATION

Rose Gate represents approximately 50 acres of the 151-acre “Westside” project annexed to the City of Lodi in 2007. Rose Gate is a triangular parcel that is bound by San Joaquin County unincorporated lands to the west, the Woodbridge Irrigation (WID) Canal on the north, and Sargent Road to be renamed Lodi Avenue to the south. See *Exhibits 1-1 and 1-2*.

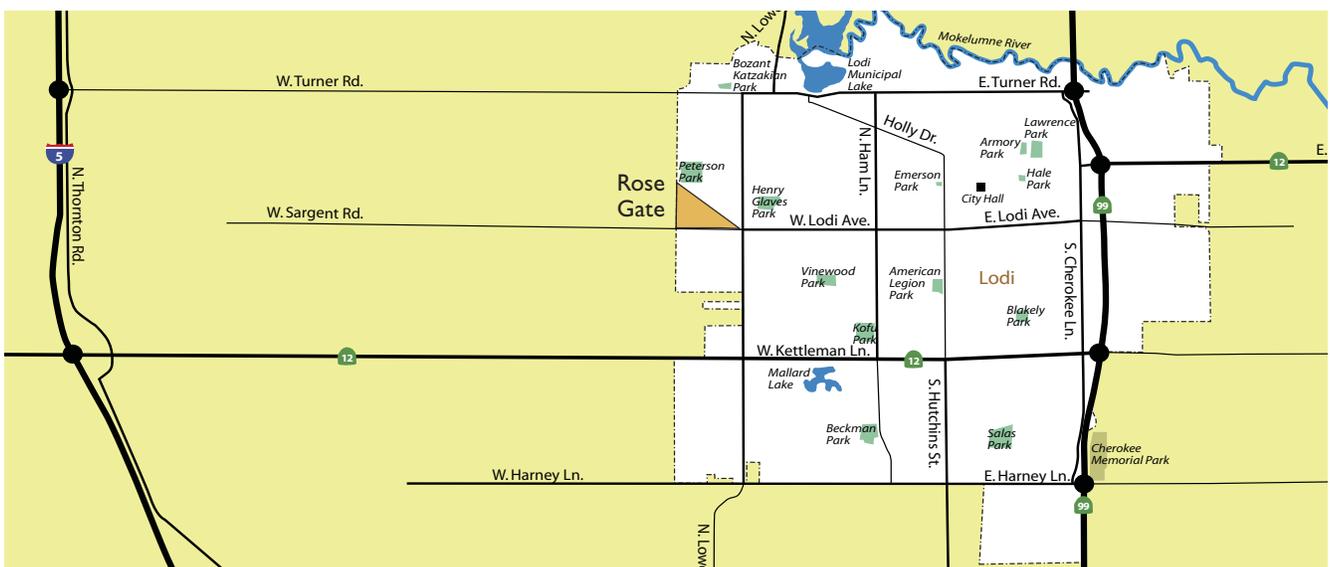

### 1.2 PURPOSE

This document outlines the Site Planning features, and sets forth the Development Standards and Design Guidelines for the Rose Gate Planned Development (PD) Overlay zone. This PD Overlay zone promotes and encourages design flexibility while protecting the public health, safety, general welfare, integrity and character of the City.

This PD is a living document that establishes comprehensive land use development regulations to promote and encourage quality neighborhood development within Rose Gate. Maximum height, minimum setbacks, design criteria, and more are established for Rose Gate consistent with the PD zone and permit requirements.

*Exhibit 1-1 — Westside Annexation Area*

*Exhibit 1-2 — Project Location*

### 1.3 THE VISION

In 1986, Congress declared the “Rose” as the national flower and floral symbol of the United States. Sixteen years later, in 2002, with support from the Lodi/Woodbridge Garden Club and Lodi Memorial Hospital, the City of Lodi passed a resolution that made the rose Lodi’s official flower. Examples of Lodi’s affinity for the rose are found everywhere. Roses are abundantly planted in both private gardens and public landscaped areas. Roses dot the vineyard landscapes on rural roadways surrounding the city. The Lodi Wine and Visitor’s Center that welcomes thousands of guests each year to Lodi’s vibrant wine country is part of the landmark hotel, Wine and Roses. Finally, Rose Street is one of Lodi’s finest, located near the historic downtown district.

Rose Gate represents yet another opportunity to convey the sense of pride and connectivity that distinguishes Lodi from other cities. Rose Gate will become the western entrance into town on Lodi Avenue. A variety of roses will be incorporated into the landscaping plans along with other plants and trees that thematically echo Lodi’s rich history. Neighborhood streets will be named after the nearly unlimited variety of roses. Other design elements will also be consistent with the “Rose” theme to provide texture to the community.

Rose Gate includes a gracious primary entry off of Lodi Avenue highlighted by a well-landscaped roundabout. Upon entering the community, residents and visitors will be greeted by a central park and open space area with 360 degree visibility providing a sense of safety and security for its’ users, (eyes on the park). All homes in Rose Gate are within a few blocks of the park. Residents are also within walking distance of the Westgate Shopping Center. When future development occurs south of Lodi Avenue, an elementary school is planned at the western extension of Vine Street. In addition, to shopping and schools, Rose Gate is close to several churches along Lower Sacramento Road making pedestrian travel to all these facilities very feasible.

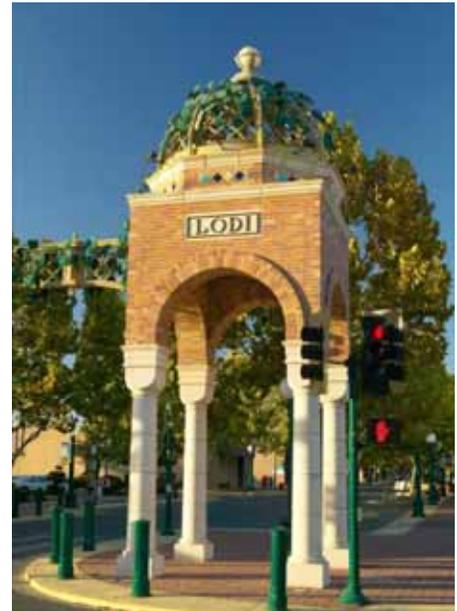

The regionally based architectural vocabulary of Rose Gate adds another level of articulation to the streetscape. Elevations will be drawn from three families of traditional California architectural styles. Homes will provide character and variation to the streetscene by incorporating compatible styles, varying massing, and orienting features toward pedestrian-friendly circulation. In addition, indoor/outdoor spaces will be incorporated into home design to enhance the lifestyle opportunities afforded by Lodi’s Mediterranean climate.

**1.3.1 Objectives**

The Rose Gate PD Overlay includes the following objectives:

1. Ensure creative and efficient design
2. Integrate the development with the existing community through sensitive and aesthetic edge treatments
3. Establish a ‘sense of place’ through neighborhood crafting elements
4. Design neighborhoods around a park
5. Create streetscenes that provides a comfortable pedestrian atmosphere
6. Promote architecture that represents regional styles, building variety, and aesthetic appeal along the streetscape
7. Provide a range of housing opportunities
8. Integrate indoor/outdoor living spaces

## I.4 LAND USE & ZONING

### 1.4.1 Existing Conditions

The 50-acre triangular shaped Rose Gate was formerly a vineyard for many years and is currently fallow.

The requirements of CEQA have been met for the Project by the certification of the Lodi Annexation Environmental Impact Report (Westside) [EIR-05-01] and adoption of Findings and Statement of Overriding Considerations for the Project by City Council Resolution in March, 2007.

### 1.4.2 General Plan and Zoning

The Lodi General Plan designates this site Low Density Residential. The Lodi Zoning Map designates this site as LDR (Low Density Residential) with a PD (Planned Development) Overlay. This document establishes the development standards for the PD Overlay.

*Exhibit 1-3 — Existing Conditions*

## 2.0 SITE PLANNING

Rose Gate combines an array of site planning details and, importantly, emphasizes pedestrian connectivity. A large central park is within a walking distance of all homes. Pedestrian travel to Lower Sacramento Road shopping, schools and other public places are enhanced by the landscaped pedestrian travelway along Lodi Avenue. Smaller block sizes are provided where possible, recognizing practical limitations such as the WID canal. Other important site planning features include:

1. Minimal number of cul-de-sacs
2. Variety of lot sizes
3. Intimately scaled neighborhoods
4. Thoughtfully planned streetscapes
5. Park-like landscape design at Lodi Avenue/Lower Sacramento project edge
6. Gracious project entry experience

*Exhibit 2-1 — Rose Gate Site Plan*

## 2.1 LOT TYPES

Lot types presented in this section further define the City of Lodi’s land use requirements to allow for flexibility in design and a more diverse range of housing types to meet the needs of the local community. For the most part, the lot sizes are organized by Village as depicted on *Exhibit 2-1* to facilitate phasing. However, there is also a blending of the lot sizes throughout the overall community allowing for a more diverse streetscape mixture of house sizes and styles.

Lot types and sizes to be utilized within Rose Gate include:

### Village I (LDR-V1):

These homesites are located east of the central park and are generally 48’x90’ and 48’x95’ dimensions with a minimum area of 4,000 square feet. This lot configuration provides compact designs in a traditional neighborhood setting. The lots and homes will mesh seamlessly with the adjacent neighborhoods.

### Village II (LDR-V2):

These homesites represent medium sized lots predominately at 5,500 square feet with a 55’x100’ dimension. There are also 5,000 square foot homesites in this Village with a 50’x100’ dimension. These homesites are generally located west of the central park closer to Lodi Avenue. This neighborhood design will accommodate a variety of single-story and two-story home designs.

**Village III (LDR-V3):**

The homesites in this Village include both 6,000 and 7,000 square foot homesites with standard 60'x100' and 70'x100' dimensions. These homesites are generally located west and north of the central park and closer to the WID canal. The Village 3 homesites are the largest lots and will provide for an increased variety of architectural design and variation of the street scene and greater opportunity for single-story homes. The Village III homesites may also provide an opportunity for custom home sites.

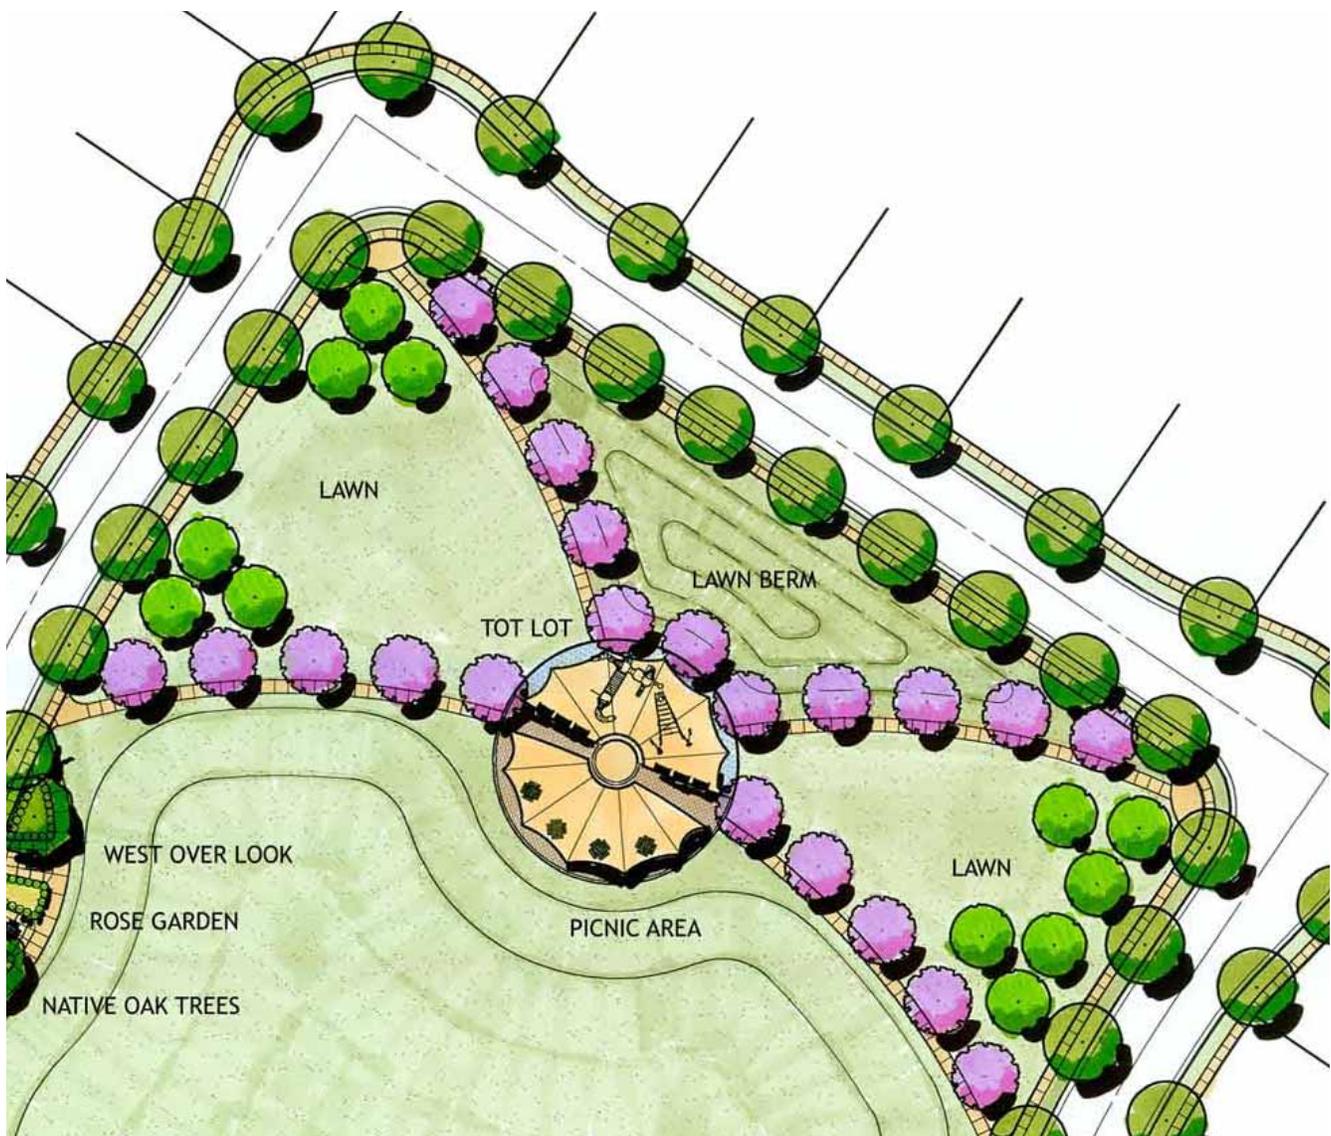

**2.2 PHASING**

Certain backbone infrastructure within the project boundary will be installed in the initial phase of the project as required by the City. These improvements will include rough grading, storm drain, water, sewer, and major street improvements. Development of the three Villages may be done in up to three phases depending on market conditions. Home construction will likewise be phased according to market conditions and will likely include multiple phases within each Village.

Project development is scheduled to begin in the Spring of 2014. The precise timing of the initial phase and any subsequent phases are not determinable at this time but are expected to continue uninterrupted once development begins until completion.

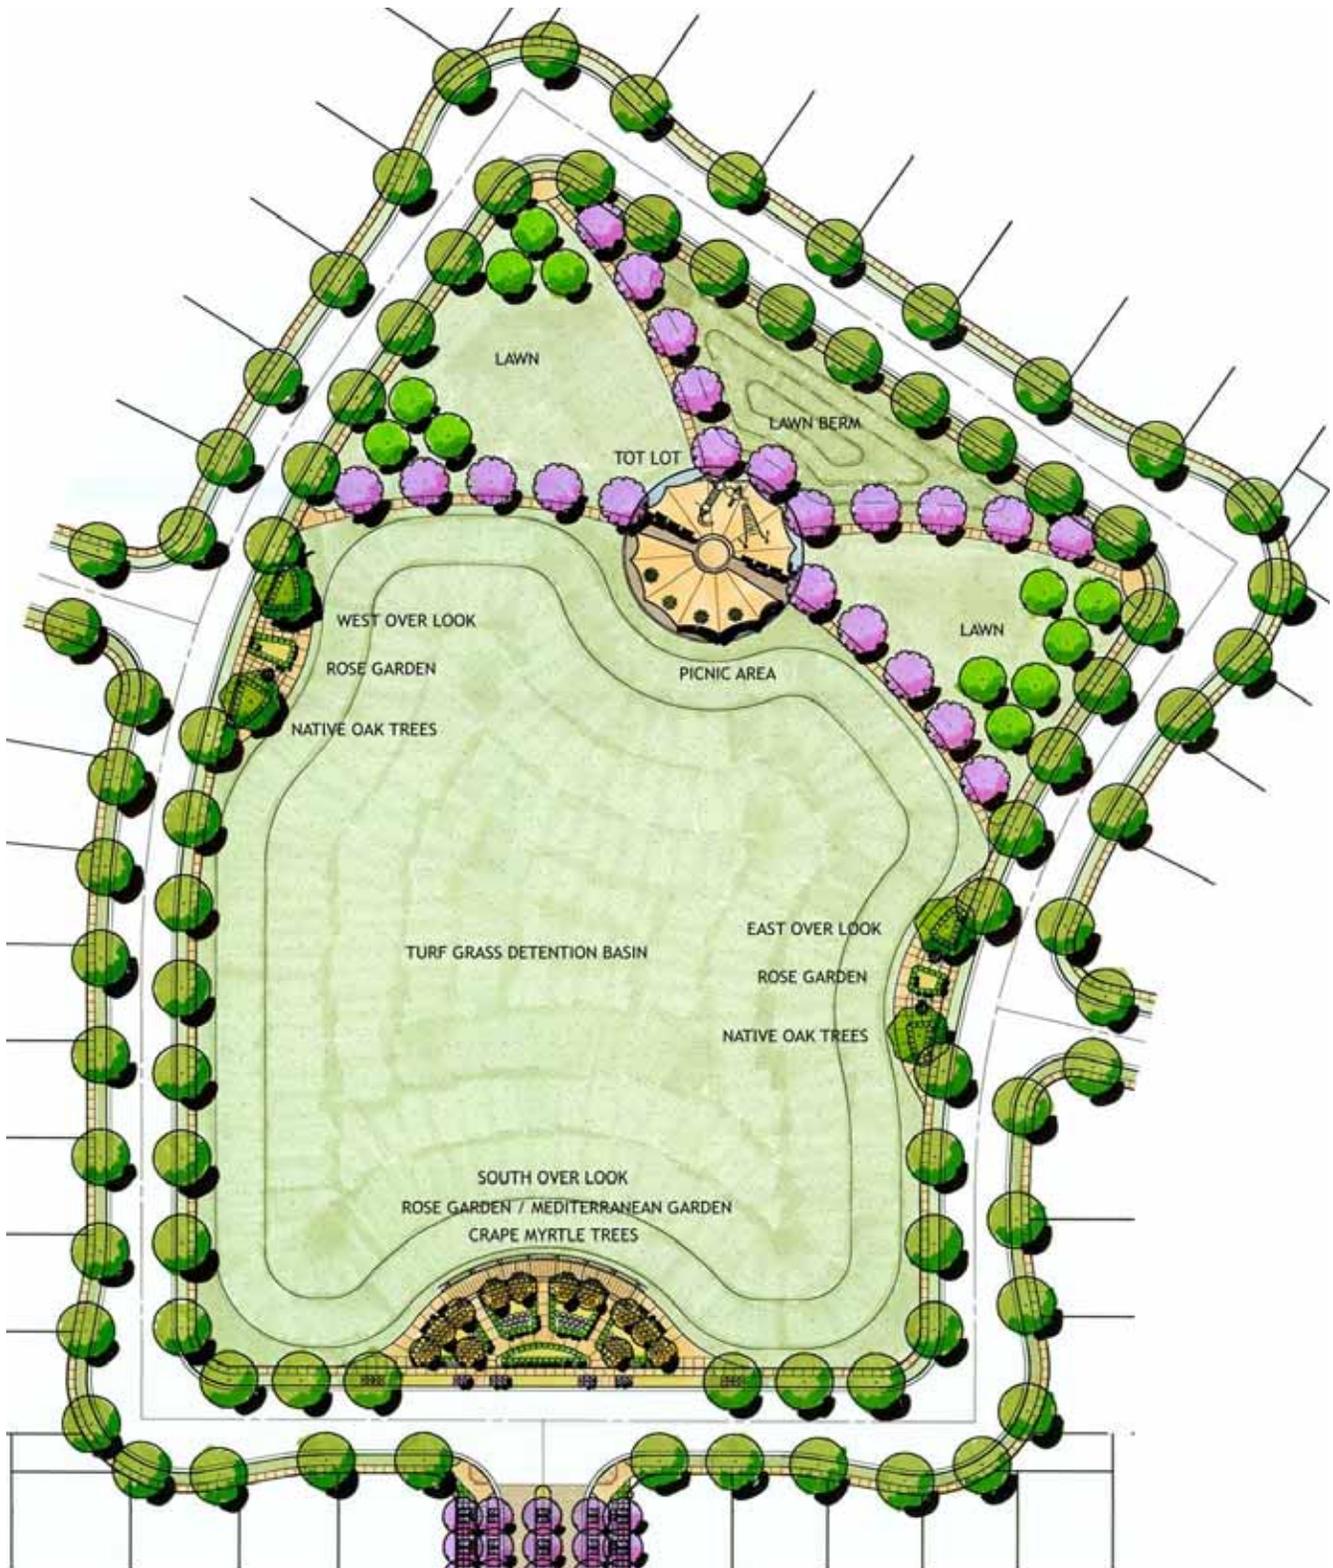

### 2.3 CENTRAL PARK / BASIN

The combined central park/basin facility totaling nearly five (5) acres is an important functional and aesthetic feature for the community. It provides a long-term storm water retention solution for Rose Gate as well as sufficient upland park to satisfy the park dedication requirements. The conceptual design includes a playground for children, picnic area, and overlook areas located at the three (3) intersections surrounding the park/basin. The final park/basin design will be subject to further review and approval by the City.

*Exhibit 2-2 — Central Park Concept Detail*

Illustrations are conceptual only. All plans are subject to review and approval by the City of Lodi.

Illustrations are conceptual only. All plans are subject to review and approval by the City of Lodi.

*Exhibit 2-3 — Central Park Concept*

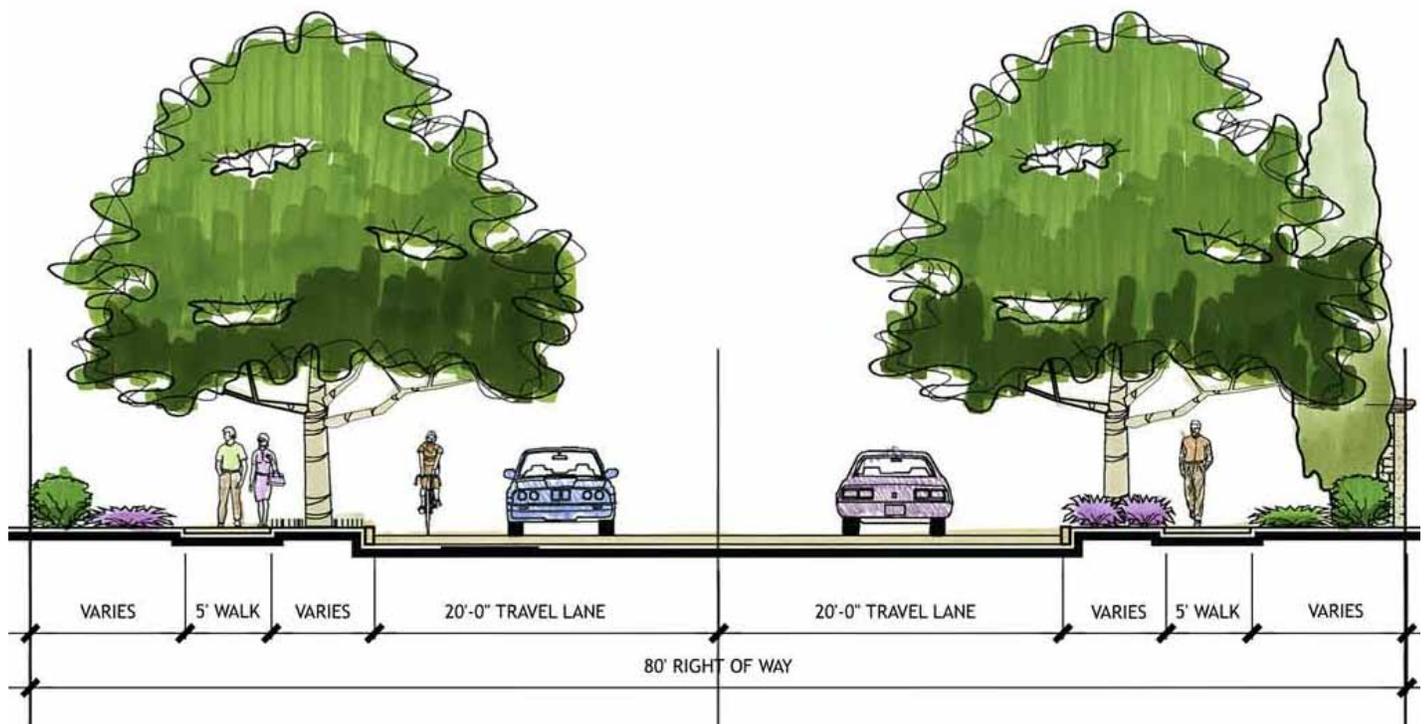

## 2.4 NEIGHBORHOOD INTEGRATION

Since the Rose Gate community is located on a triangular shaped parcel at the edge of Lodi, just south of the WID canal, the ability to connect the community to existing neighborhoods is limited. However three vehicular connections shall be provided to Lodi Avenue and two vehicular connections shall be provided at the western boundary of the development for connection to future development.

## 2.5 EDGE CONDITIONS

### 2.5.1 Lodi Avenue Streetscape

The community wall along Lodi Avenue represents the southern edge of the project. A twenty-foot (20') landscaped zone between the wall and the street will include a five-foot (5') wide meandering sidewalk. Movement of the sidewalk will create landscape zones and allows for a variety of plant material including trees on both sides of the walks. Plantings will also include appropriate material to serve as an anti-graffiti shield along the wall on Lodi Avenue.

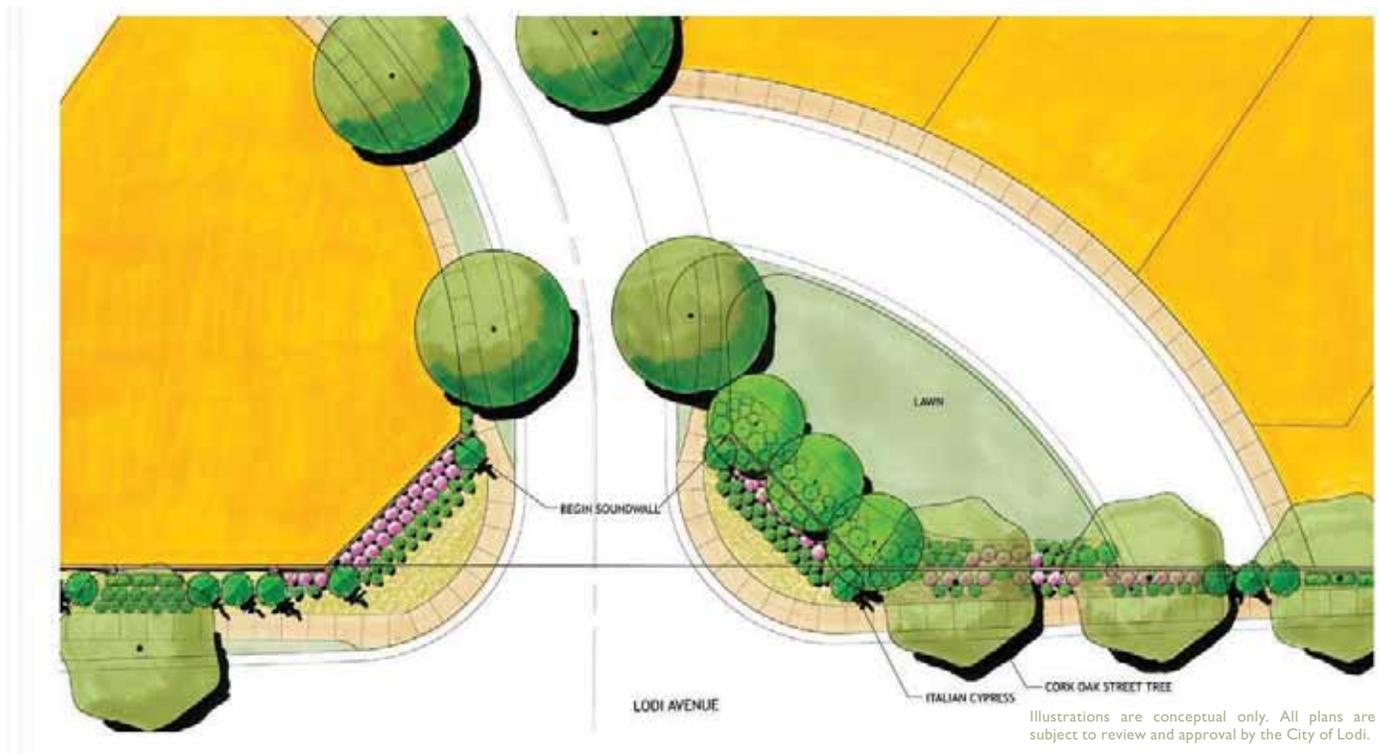

*Exhibit 2-4 — Lodi Avenue Street Section*

### 2.5.3 Minor Entry – Village I at Lodi Avenue

A “right-in/right-out” access to Rose Gate near the Lodi Avenue/Lower Sacramento Road intersection is planned to facilitate local neighborhood traffic, emergency vehicle access and pedestrian travel to Village I. A median in Lodi Avenue at this location will prevent both left turns into Village I from Lodi Avenue and left turns out from Village I onto Lodi Avenue east bound traffic.

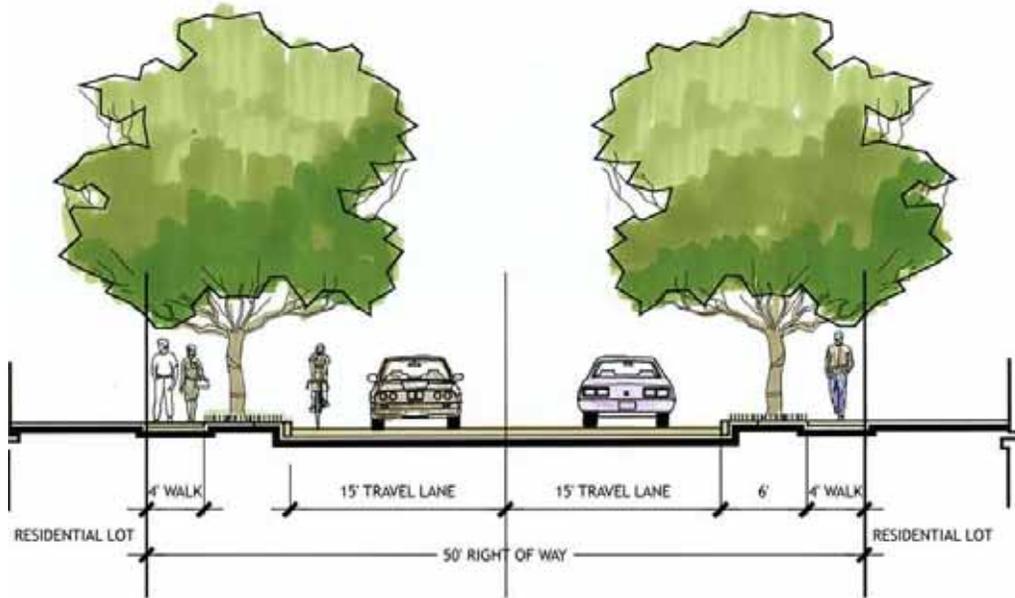

There is no landscaped median planned at this minor entrance. Otherwise, the landscaping and monument signs on each side of the entry will be consistent with the secondary entry near the west edge of the community. The combination of the three vehicular access locations will make all Rose Gate neighborhoods easily accessible to Lodi Avenue. This design should encourage pedestrian travel and reduce vehicle traffic within the internal street network.

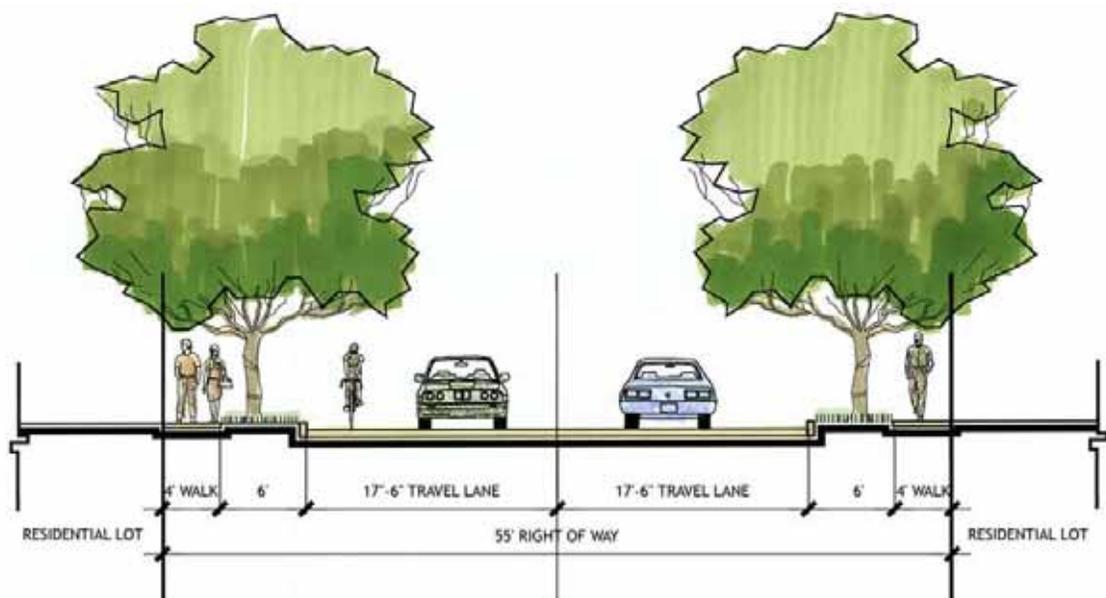

*Exhibit 2-6 — Minor Rose Gate Entry at Lodi Avenue*

## 2.6 VEHICULAR CIRCULATION

All streets within Rose Gate shall be designed to accommodate traffic speeds of 25 miles per hour or less and comply with City of Lodi street standards. Sidewalks shall be separated by parkway streets. At least one (1) canopy street tree shall be planted at every lot front. Additional trees may be planted on wider lots subject to the review and approval of the landscape plans by the City of Lodi. A canopy street tree will be planted along side streets. The parkways will be landscaped with low-water use groundcover and plant materials.

*Exhibit 2-7 — Neighborhood Street Section (50-Foot Wide ROW)*

*Exhibit 2-8 — Neighborhood Street Section (55-Foot Wide ROW)*

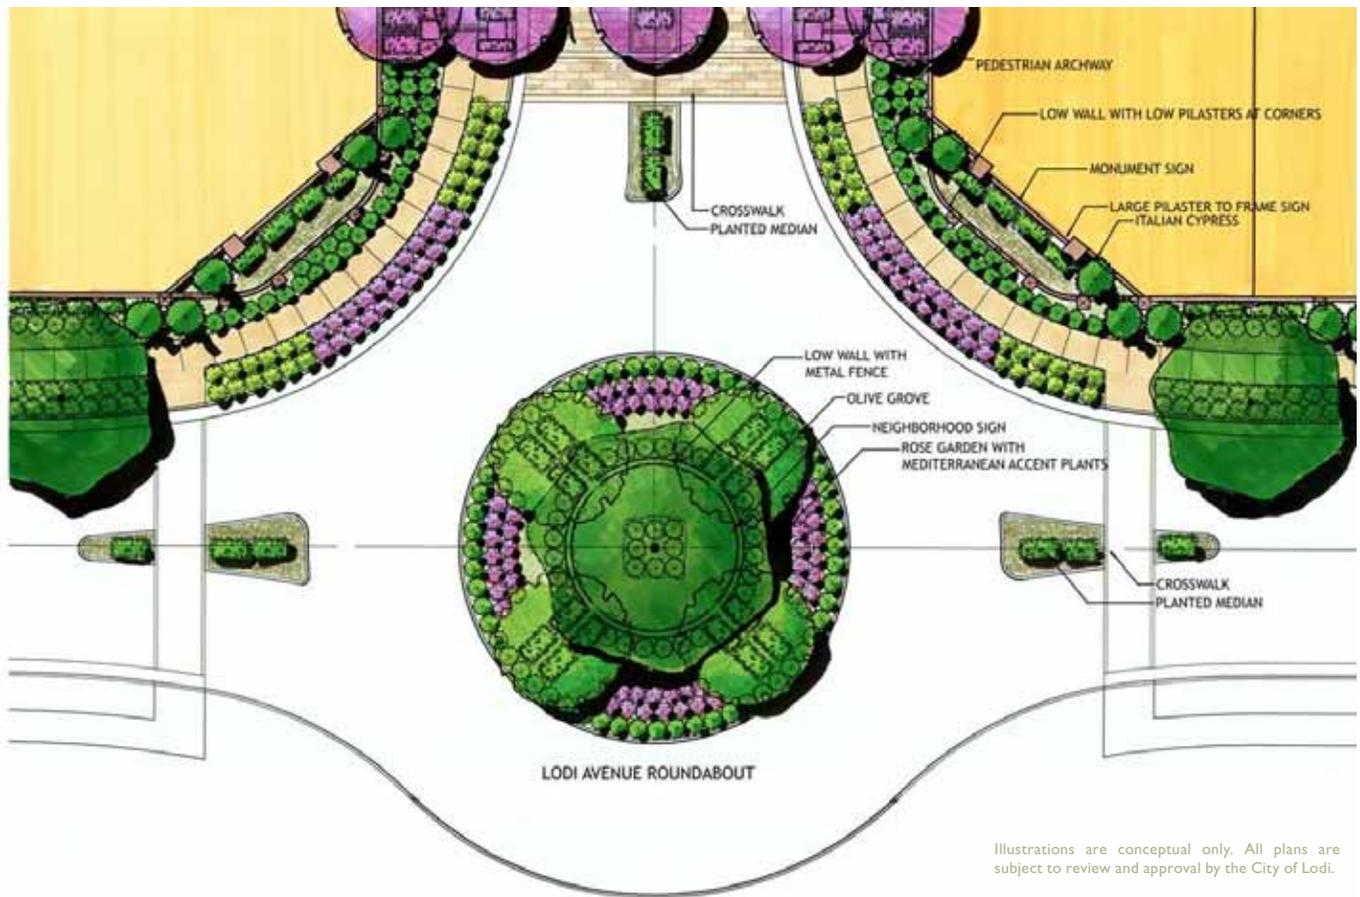

**2.6.1 Roundabout**

A roundabout is proposed for Lodi Avenue at the primary entrance to Rose Gate to improve traffic flow. The conceptual landscape design of the roundabout includes ground cover and shrubs around the perimeter bordered by a low wall with iron accents and project signage. At least five (5) trees are also included in the conceptual design. As with all landscaping shown in these PD Guidelines, final approval is subject to a more detailed plan submittal followed by a review and approval process.

Illustrations are conceptual only. All plans are subject to review and approval by the City of Lodi.

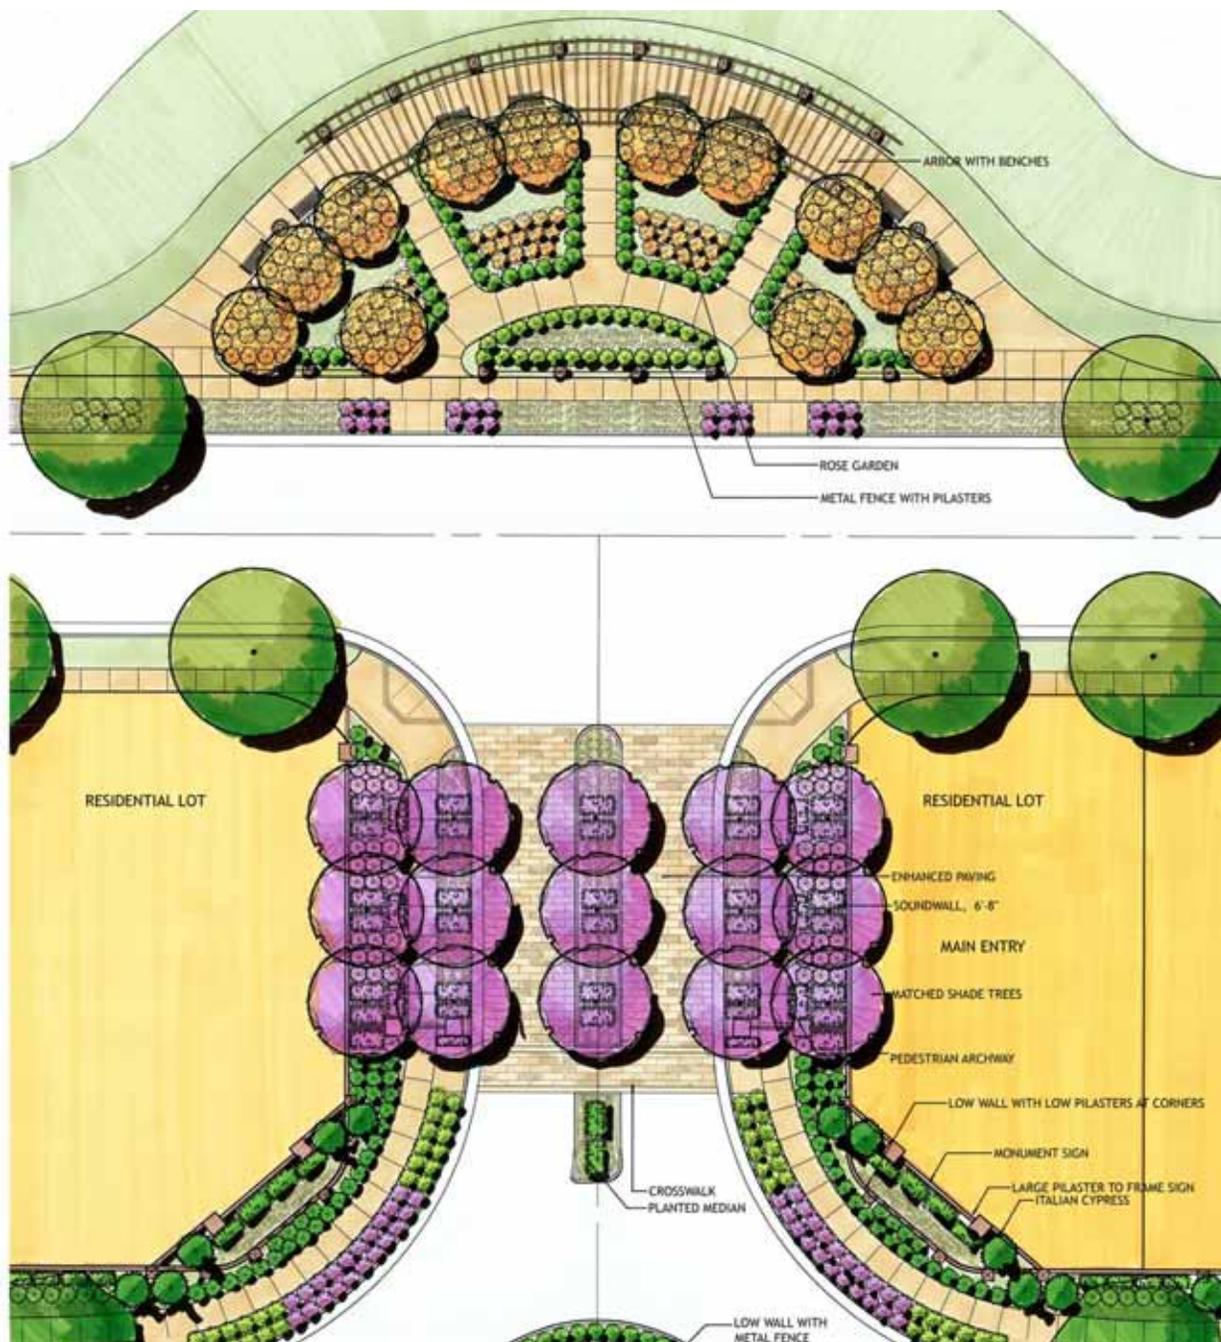

*Exhibit 2-9 — Roundabout Elevation*

*Exhibit 2-10 — Roundabout Plan*

### 2.7 PRIMARY ENTRY

The one primary entry will feature a landscape median and enhanced landscape along the wall to complement the architectural character of the community. Rose Gate monument sign(s) will be located at the entry and the pedestrian experience will be enhanced with a pedestrian passageway articulated by two stone columns connected with decorative iron overhead. Emphasis on the street tree selection and pattern will highlight connectivity and access to Rose Gate.

Illustrations are conceptual only. All plans are subject to review and approval by the City of Lodi.

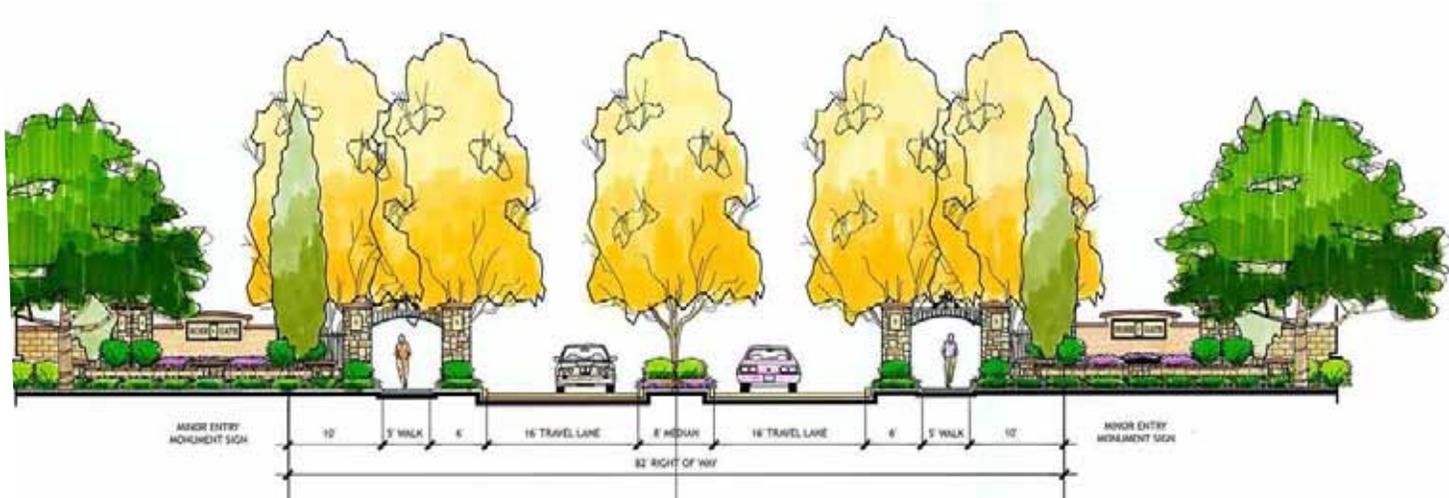

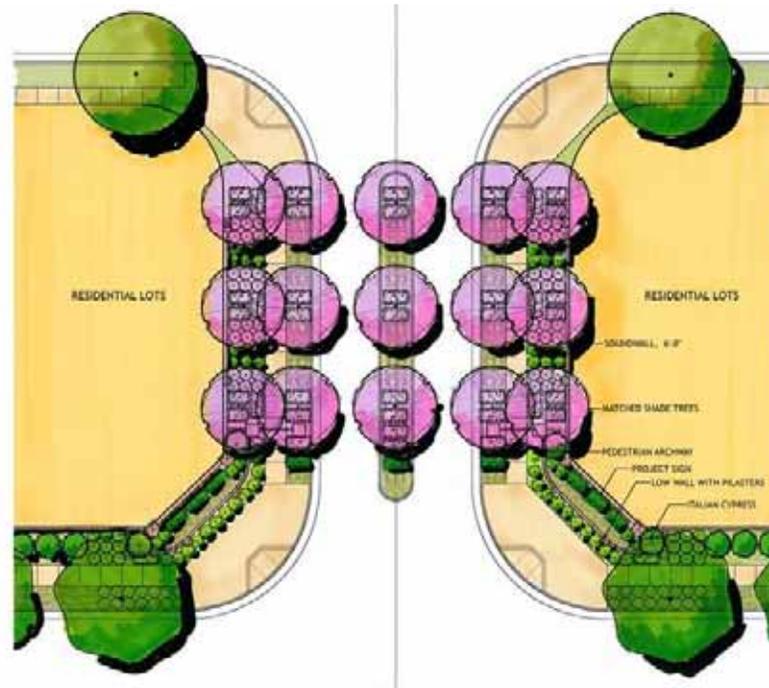

*Exhibit 2-11 — Primary Entry Plan*

This page intentionally left blank

### 2.8 SECONDARY ENTRIES

The secondary entries will also feature enhanced landscape to complement the architectural character of the community. Rose Gate monument sign(s) will be allowed on each side of the entry. As with the primary entry, emphasis on the street tree selection and pattern will highlight connectivity and access to Rose Gate.

Illustrations are conceptual only. All plans are subject to review and approval by the City of Lodi.

*Exhibit 2-13 — Secondary Entry Plan and Elevations*

### 3.0 DEVELOPMENT STANDARDS

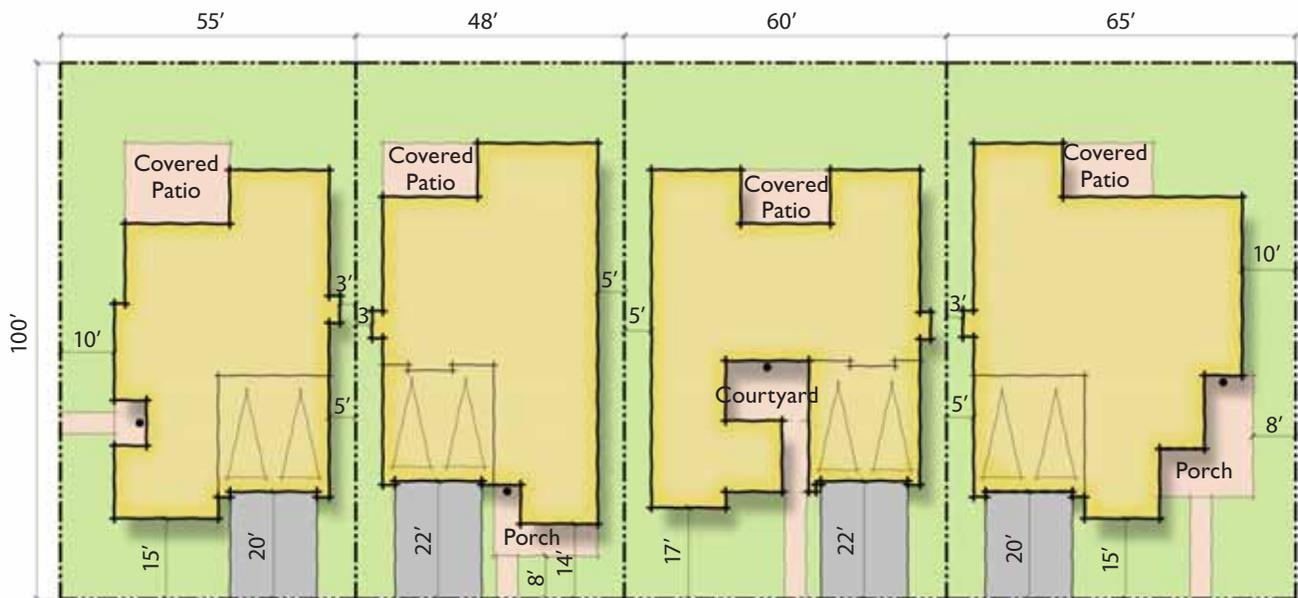

#### 3.1 OVERLAY DEVELOPMENT STANDARDS

The Overlay Development Standards for Rose Gate were crafted to ensure that all development within Rose Gate would result in an attractive, desirable and secure environment that is compatible with the adjoining neighborhoods.

The Master Developer shall create a Design Review Board for Rose Gate charged with reviewing all proposed development for consistency with these PD Guidelines. The Design Review Board shall include a licensed architect and structural engineer as well as a representative from the Master Developer. All project plans shall be reviewed and approved by the Design Review Board prior to any application submittal to the City of Lodi for approval or building permits.

##### 3.1.1 Typical Plotting

The following diagram demonstrate sample setbacks for the lots types within Rose Gate. All setbacks are measured from property lines to foundation. Encroachments are permitted per LMC Section 17.14.060A.2 and LMC Table 2-2 - Allowed Projections into Residential Setbacks. Porches are not part of this 30% of building wall calculation since they are permitted to be 8 feet from the street side property line.

*Exhibit 3-1 — Standard Lot Development Standards Diagram*

**Table 3-1: LOT TYPE DEVELOPMENT STANDARDS SUMMARY**

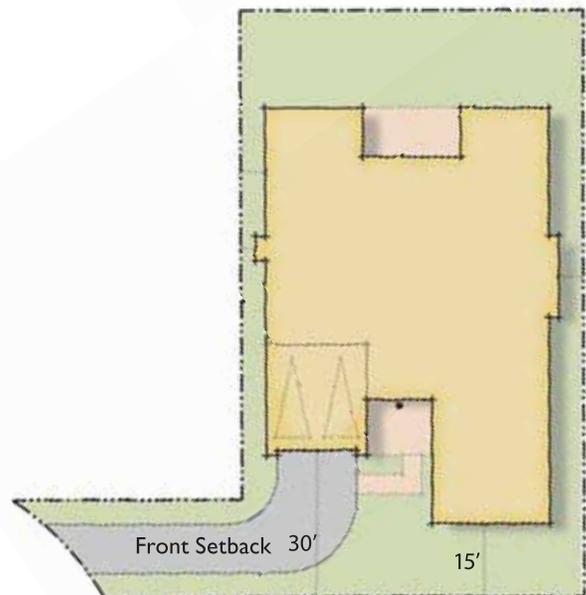

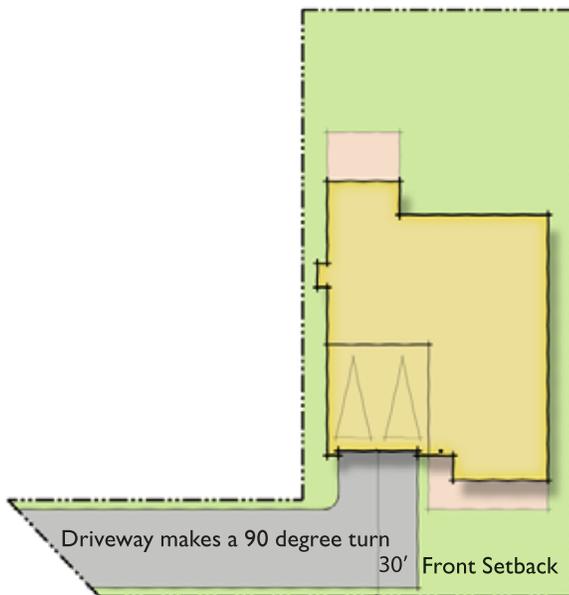

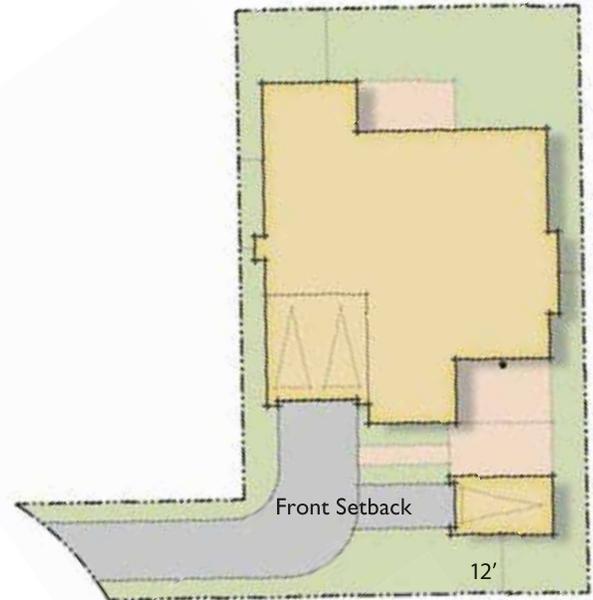

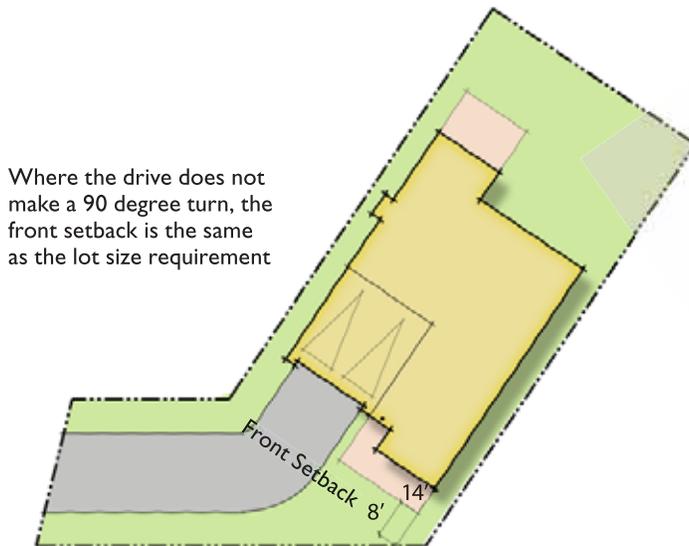

Development Standard	Lot Type		
	Village I LDR-VI	Village II LDR-V2	Village III LDR-V3
Minimum Lot Area	4,000 sf	5,000 sf	6,000 sf
Typical Street Frontage Width	48'	50'/55'	70'
<b>Setbacks (minimums in feet)<sup>(1)</sup></b>			
<b>Front</b>			
Living Space	14'	15'	15'
Side-on Garage <sup>(2) (6)</sup>	N/A	12'	12'
Garage Door <sup>(5)</sup>	20'		
Balcony/Porch <sup>(9)</sup>	10'	10'	10'
Courtyard <sup>(3)</sup>	8'	10'	10'
<b>Interior Side</b>			
Living Space/Garage/Courtyard <sup>(3) (7)</sup>	5'		
<b>Street Side</b>			
Living Space	10'		
Garage Door	20'		
Porches <sup>(9)</sup>	8'		
Courtyard <sup>(3)</sup>	6'		
<b>Rear</b>			
Living Space/Patio Cover/Porch	10'	15'	15'
<b>Site Coverage<sup>(4)</sup></b>			
1-Story	60%	60%	60%
2-Story	55%	50%	50%
<b>Height Limits</b>			
Buildings <sup>(8)</sup>	2 stories; not to exceed 35'		
Fences	6'		
Arbors/Trellis	12'		
Parking	2 enclosed stalls		
Accessory Structures	Permitted up to 6' in height within 3' of any side or rear property line, and in excess of 6' shall be located not less than 5' from any side or rear property line. No accessory structures permitted front yard setback or exceeding 12' in height.		

**Notes**

- (1) All setbacks are measured from property lines to foundation. Required setback applies to habitable space and porches, but excludes all architectural projections listed below.
- (2) Side-on garages only permitted on lots 55' and wider.
- (3) Courtyard wall may not exceed 36 inches measured from finished grade.
- (4) Lot coverage does not include eaves, roof overhangs, and covered porches and patios.
- (5) Twenty-foot (20') setback applies to garage door(s) facing the street frontage, measured from the P/L except at private streets without sidewalks, in this case the setback is measured from the back of curb.
- (6) In conditions where the garage door(s) are set perpendicular to the street (swing garages), the minimum front yard setback from the garage shall be twelve feet (12')
- (7) Permitted architectural projections include; roof overhangs, pop-outs and decorative trim, fireplaces, bay windows and entertainment niches extending up to 2'-0" into the setback area. Projections cannot exceed 30% of building wall.
- (8) Measured from the highest point where grade abuts the structure to the highest point of the roof.
- (9) Front porches shall be a minimum depth of 6 feet and corner wrap around porches shall be 5 feet on side yards.

### 3.1.2 Flag Lots

The front yard setback shall be measured from the nearest point of the wall of the structure where the access strip meets the bulk of the parcel. Where the driveway requires a 90 degree turn, at least 30 feet will be provided from the garage door.

*Exhibit 3.2 — Flag Lot Front Setback Diagram*

## 3.2 SIGNS

The Rose Gate development may have a signs identifying the name of the community at each primary entry. These signs may be either in the median or on the community wall on either side of the entry.

### 3.3.1 Temporary Real Estate Signage

The following temporary real estate signs are permitted within the Rose Gate PD Overlay provided they are not located within the public right-of-way.

- Future Development Signs: Signs indicating “future development” and/or “builder product identification,” to be used by a residential builder to market the sales of their homes. At least one Future Development Sign for each separate development project is permitted. A Future Development Sign shall not exceed 100 square feet in area nor a height of 8 feet including the base.
- Flags: Flags up to four feet (4’) by six feet (6’) are permitted at model sales complexes and along the perimeter wall.
- Directional A-Frame Signs: A-frame signs that direct home buyers within the community while active sales and marketing are underway. These signs shall not exceed three (3) feet in height. Typically these signs will be located near intersections to direct visitors to the sales offices and would be removed from public view at the end of each business day.
- Directional Signs: Small two feet (2’) by three feet (3’) signs that direct home buyers within the community while active sales and marketing are underway. These signs shall not exceed three feet (3’) in height. Typically these signs will be located near intersections to direct visitors to the sales offices on the weekends and holidays and would be removed by the end of the weekend.

### 3.3 CORNER LOTS

Corner lots have a high-level of visibility and impact on the community as a whole. These lots serve as an introduction to the architectural style and individualized character of a neighborhood as a secondary level entry statement.

- Corner lots shall be at least five feet (5') wider than interior lots to allow for greater setbacks and architectural detailing on the corner-side.
- Materials and details should wrap to the corner-side elevation.
- Fencing along the corner side shall not screen more than 60 percent of the corner-side elevation of the home.
- Corner lots set the tone for architectural crafting and should be designed for two-sided exposure.
- All windows on the corner-side elevation should be fully trimmed, consistent with the architectural style.
- Architectural enhancements are encouraged such as: wall offsets, single-story elements, visible porch or courtyard, balcony, Juliet balcony, roof plane breaks, roof pitch breaks, or a principle window treatment.

*Architectural interest on corner lot examples*

*Example of side entry and articulation on a corner*

### 3.4 FENCES, WALLS, AND HEDGES

The provisions included in this section shall not apply to a fence or wall required by a law or regulation of the City of Lodi or any agency thereof.

- Fences, walls, hedges, signs, artwork, or any other structure or landscape materials located at the road, street corner or driveway of any parcel shall not be sized or located in such a way as to obstruct the safe stopping sight distance along adjoining streets or driveways.
- The use of chain-link, welded wire mesh, barbed wire, razor wire or razor tape as part of a fence, wall or barrier shall be prohibited.
- Fences shall be constructed of approved materials and are permitted up to six feet (6') in height with no required setbacks, except fences on corner lots require a five foot (5') setback from the property line. Fences or walls located within the front yard setback shall not exceed thirty inches (30") in height. Fences from six to eight feet (6'-8') in height are subject to review and approval of design review board. Fences in excess of eight feet (8') in height are prohibited.

### 3.5 LANDSCAPING

To allow for walkways and other pedestrian friendly landscape features, no more than 55% of the front and street side required minimum setback on standard rectangular lots may be paved with hardscape materials such as concrete or asphalt. Permeable paving or pavers do not count toward the maximum hardscape criteria. Hardscape design flexibility will be allowed for narrow frontage lots (e.g. bulb shaped and cul-de-sacs) and flag lots in excess of the 55% limitation. These designs will be subject to review and approved by the Design Review Board. The remaining front yard shall be designed by the Master Developer /Builder to meet the requirements of LMC Section 17.30.070 Water Efficient Landscape Requirements. Rose Gate CC&Rs will help ensure that front and street side yard landscape continues to be well designed and maintained.

### 3.6 LIGHTING

All signage and outdoor lighting for illumination of landscaped areas, pathways, and other special features shall comply with; (1) the standards of the City of Lodi, or (2) the design criteria including these PD Guidelines. All such signage and lighting shall be subject to review and approval of the Design Review Board and the Community Development Director.

- Exterior lighting shall be shielded or recessed to minimize direct glare or reflections. Lighting that represents movement, flashes, blinks, or is unusually high in intensity or brightness shall be prohibited. Temporary holiday lighting within public right-of-ways is not excluded from this regulation.
- All lighting fixtures shall be appropriate scale and intensity for the use intended as determined and approved by the Design Review Board.
- All street lighting shall conform to the minimum standards and design criteria established by the City. However, all street lighting systems, layout, fixtures, and lighting patterns shall be subject to the review and approval of the Design Review Board and the Community Development Director, and any deviations from the City minimum standards shall be subject to the approval of the City Engineer.

## 4.0 ARCHITECTURAL GUIDELINES

### 4.1 ARCHITECTURE FORWARD

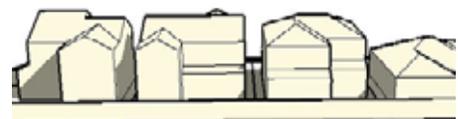

The design standards in this section seek to address the following objectives:

- Create a distinct unified identity with a consistent level of quality within Rose Gate.
- Create residential neighborhoods that provide interest and are visually pleasing.
- Incorporate single-story elements including the use of porches and courtyards to add variety to the streetscape.
- Present a variety of architectural elements to adjacent arterial, collector streets, and the central park.

### 4.2 NEIGHBORHOOD EDGE CONDITIONS

Exposed rear elevations along public edges should include a variety of rooflines, wall offsets, or details to avoid monotonous edge conditions.

- Vary front-to-back, side-to-side gables, hip roofs and/or integrate single-story elements where possible.
- Maximize rear yard setbacks, as feasible.
- Variety between plans or within plans may include:
  - Primary windows
  - Fully trimmed windows
  - Detail elements from front elevation
  - Single-story elements
  - Second-story balconies (Juliet or supported)
  - Roof plane breaks (ridge height and/or direction) between plans
  - Roof plane breaks (ridge height and direction) per plan
  - Offset wall planes
  - Varied first- and second-story massing between plans
  - Varied first- and second-story massing per plan

*Varied rear edge condition massing*

### 4.3 GARAGES

A variety of garage placements are encouraged to emphasize the pedestrian environment while accommodating the automobile. Typically, plans are to be reversed and plotted so that garages and entries are adjacent to each other to create an undulating setback. Occasionally, this pattern should be broken to avoid monotony.

Additional garage orientation may include:

- Side-on garage - the garage is accessed from a side driveway (only allowed on lots wider than 55 feet)
- Street-side entry garage - the garage is accessed from the corner side

All garages shall have roll-up doors that are setback from the exterior wall. The design of the garage doors should reflect the architectural style of the elevation selected. No three car front facing garages on lots less than 70 feet wide from the setback line.

### 4.4 PRIMARY ENTRANCES

The primary entrance to the homes will be from the street with either the front doors facing the street or with entry porticos facing the street and the front doors accessed from the side.

### 4.5 WINDOWS

At least one (1) feature window treatment should be present on all front and corner-side elevations. Feature windows are trimmed or detailed in a manner that creates visual interest to the front elevation and represents the architectural style in an aesthetic way. Feature window treatments may include:

- A window of unique size or shape
- Picture window
- Bay window
- A substantial surround or recess
- Decorative iron window grilles
- A completely trimmed window in conjunction with a porch
- Decorative head or sill treatments

*Side-on garages only allowed on lots wider than 55 feet*

*Entry portico faces the street*

*Feature window treatment*

- Grouped or ganged windows with complete trim surrounds or unifying head and/or sill trim
- A Juliet balcony with style-appropriate materials

All windows on side and rear elevations exposed to edge conditions shall be fully trimmed.

## 4.6 MATERIALS

Building materials and colors play an important role in enhancing neighborhoods. To further the goal of diversity, the following criteria should be met:

- Use durable and low maintenance finish materials.
- Employ materials and finishes authentic to the architectural style.
- Avoid awkward transitions at intersection of different materials.
- Consider different roof colors for each selected style.
- Provide visual interest with detailed elements such as shutters, exposed rafter ends, decorative grill work, decorative stucco, clay pipe vents, decorative ceramic tile, and/or other features appropriate to the selected style.
- Encourage embellishments such as stone veneer, brick and tile to reflect the architectural style of each home.
- When using more than one material on any elevation:
  - Change materials at inside corners or return siding or masonry veneers to building breaks or fence lines.
  - Wrap columns, tower elements and pilasters in their entirety.

*Material change at inside corners*

### 4.7 FUNCTIONAL ELEMENTS

All street signs, cluster mail boxes, traffic signs and street lights will be finished in a dark green color as to provide a thoughtful integration into the community landscape. All street signs, traffic signs and street lights will be per the City standards. Mail boxes will be per USPS standard.

#### 4.7.1 Address Numbers

All residential addresses shall be clearly marked, located in an area visible from the street and sufficiently lit for ease of recognition by postal and public safety agencies.

#### 4.7.2 Mailboxes

U.S. Postal Service approved mailboxes shall be provided in a ganged configuration with enhancements per U.S. Postal Service standards. Details and colors should complement the architectural character of the neighborhood. Style and color will be selected by the Master Developer.

#### 4.7.3 Mechanical Equipment

Mechanical equipment should be screened from public view.

#### 4.7.4 Gutters and Downspouts

Drainage solutions should be unobtrusive, complementing the overall building design and color.

#### 4.7.5 Street Lights, Traffic Signs, & Street Signs

All street signs, cluster mail boxes, traffic signs and street lights will be finished in a dark green color as to provide a thoughtful integration into the community landscape.

## 4.8 ARCHITECTURAL STYLES

Rose Gate is envisioned as a diverse community where architectural massing, roof forms, detailing, walls, and landscape collaborate to reflect historic, regional, and climate-appropriate styles.

Three broad families of styles have been selected for Rose Gate:

- European
- California Colonial
- American Traditional

Rose Gate will display a variety of architecture; however, individual neighborhoods may reflect a combination of all three styles families - or may include individual styles from within a particular style family.

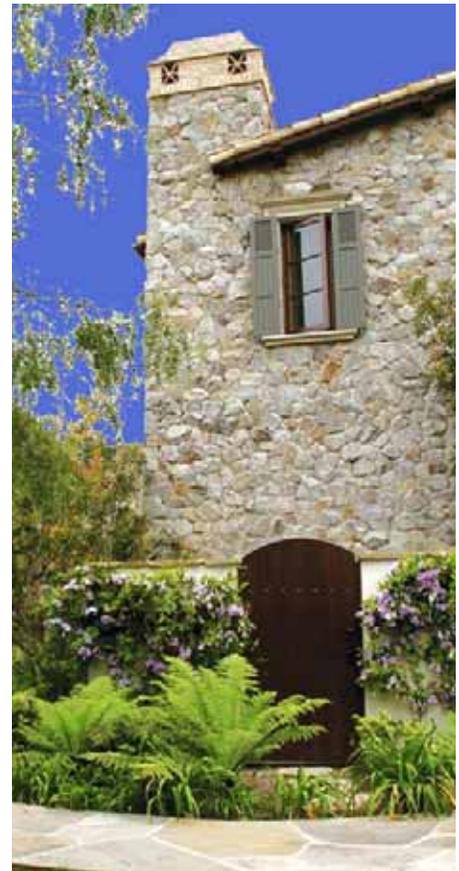

### 4.8.1 European

The European style is a good example of transplanted styles developed in a climate zones similar to the climate found in California. Specific European styles include Tuscan, Mediterranean, French, and English. The European Style Family is not strictly European, but rather American stylization of European landmarks and residences that were popular in the late nineteenth century. Primarily stemming from Italian and French influences, these styles are principally based on simpler and informal residential living styles of country settlements or old world villages. Their appeal is in their informal, rustic character expressed in warm colors, textures, and materials. Although residential adaptations were less formal, sometimes traditional classical elements are included.

#### *Typical European Elements*

- Plan form is typically a series of simple or inter-connected boxes.
- Exposed rafter tails with decorative end cuts or brackets may be used.
- Front entries are typically detailed with a historic-look trim surround and/or wood head trim.
- Wall materials typically consist of stucco with stone and classical accents.
- An arched element is often used in conjunction with windows or doors.
- Windows are sometimes detailed with projecting head trim of brick, stone, or wood, and plank shutters.
- A horizontal banding element is sometimes used.
- Details sometimes include wrought iron elements, classical trim elements, a Juliette balcony, arched windows or quoins.

### 4.8.2 Californian Colonial

This style family reflects the traditional heritage of the California homes that were influenced by the Spanish Mission and Mexican Rancho eras. Examples of specific styles within this family include Spanish Eclectic, Monterey, Hacienda, and Santa Barbara.

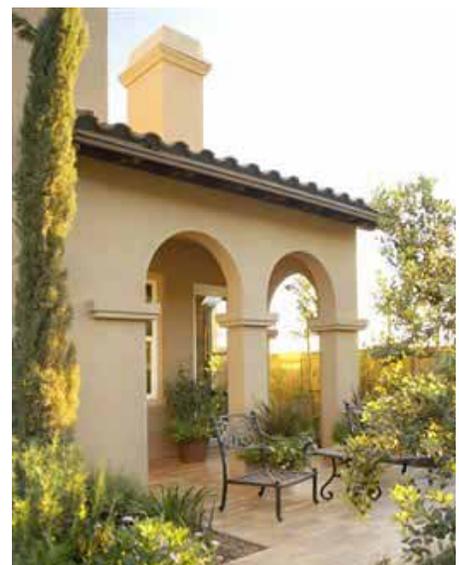

Over the years, architectural styles in California became reinterpreted traditional styles that reflect the indoor-outdoor lifestyle choices available in this Mediterranean climate. These styles included the addition of western materials while retaining the decorative detailing of exposed woodwork, wrought iron hardware, and shaped stucco of the original Spanish styles. Mixing of style attributes occurred between styles such as adapting Spanish detailing to colonial style form, or colonial materials and details to the Hacienda form.

The mixing of style attributes allows creative interpretation of the traditional styles utilizing details to express an abstracted architectural expression of a recognizable style that incorporates new, modern, or alternative forms, details, and materials in the modern context of architecture.

#### *Typical Californian Colonial Elements*

- Plan form is typically a courtyard or a two-story box with a strong first story element.
- Roofs are typically shallow to moderately pitched.
- Roof materials can include shingles, flat concrete tile, “S” tile or barrel tile.
- Roof forms are typically simple gable roofs with moderate overhangs.
- Wall materials typically consist of stucco, brick, or siding.
- Shaped corbels, beams, and rafters are typical.
- Balconies are typically detailed by simple columns without cap or base trim.
- Porch details include arches or simple columns without cap or base trim.
- The front entry is typically traditionally pedimented by a surround, porch or portico.
- Windows may include a window head or sill trim and shutters.
- Corbels and posts sometimes incorporate more “rustic” details.
- Arcades are sometimes used.
- Decorative wrought-iron accents, grille work, and post or balcony railing may be used.

### 4.8.3 American Traditional

This broad family of styles is sometimes characterized as “traditional” architecture. Examples include Cottage, Farmhouse, Craftsman, Bungalow. Ranch is also considered a California Traditional style. This collection represents traditional American styles found throughout the country and in Central California. The architectural form and elements of these styles descend from the first homes built in the New England colonies in the 17th century. These traditional-influenced styles became part of the early California vernacular as the new state experienced an influx of money and population from the East Coast during the gold rush era of the mid-19th century. This influx brought East Coast culture, materials, and technological advancements to the West. Second stories with overhangs, dormers, and gabled roof forms are classic elements of these traditional American styles. Wood shutters can also be used as finishing details for an otherwise simple and functional form.

#### *Typical American Traditional Elements*

- Plan form typically simple box or “L”-shaped or a combination of the two.
- Roofs are typically of moderate to steeper pitch with exaggerated eaves.
- Roof materials can include asphalt shingles or flat concrete tiles.
- Windows often are fully trimmed and may include shutters.
- Decorative or pedimented head and sill trim is typical.
- Porches can be prominent.
- Windows are usually vertically proportioned with divided-lites.
- Wall materials may include stucco, horizontal or shingle siding, and stone accents.

## 5.0 ROSE GATE PD PROCESS AND FINDINGS

The standards and guidelines of this document provide the blueprint for development Rose Gate. Upon approval of the Rose Gate PD Overlay, the standards, guidelines and procedures shall become the applicable zoning standards for all land uses and development within Rose Gate. In the case of differences between this document and the City of Lodi's Zoning and Development Ordinances, this Rose Gate PD Overlay shall prevail.

The Master Developer and homebuilders will be responsible for complying with the Rose Gate PD Overlay. Plans shall not be submitted to the City without review and approval by the Design Review Board.

### 5.1 DESIGN REVIEW PROCESS

A quality community is more than the completion of the rules and regulations. The streets need to do more than convey automobile traffic, they need to foster a daily experience that creates the context for living, working and playing. Homes need to be more than an individual residence; they need to express the character and context of the community to generate a streetscene that has an identity and texture. Parks need to be more than the planting of left over space; they need to add texture and interest to infuse physical and social activity into the community fabric. Rose Gate needs to be more than a place to reside, it needs to be a place to live and thrive. The standards and guidelines of this document have been set forth to establish a vision and level of quality for the Rose Gate development.

The Master Developer will utilize an internal design review process to achieve the vision and quality of community outlined by this document. This Master Developer design review process includes concept review through plan development, and any modification to ensure individual homebuilder packages foster a cohesive community design that meets the vision of the Rose Gate development. Design review includes the following elements:

- Site Planning
- Residential architecture
- Landscape
- Civil engineering
- CC&Rs

It is the Master Developer's intent that internal design review be of a caliber that City-submitted plans will be in compliance with the PD Overlay and processed in an efficient and timely manner.

Approval of this PD Overlay will allow for any development within the Project that complies with this document. As part of the building permit process, the Community Development Department shall review for compliance with the development standards. However the City of Lodi will not be responsible for compliance with the architectural guidelines in the PD overlay. The architectural review will be conducted by the Design Review Board. The Architect and homebuilders are encouraged to meet informally with City staff to review preliminary building plans prior to plan check to clarify any questions or issues regarding the compliance with City Codes and Regulations. Any preliminary advice or consultation from staff shall not be considered as an approval. In the event the Community Development department identifies issues of noncompliance, the applicant will be given a specific and detailed list of corrections necessary to be in compliance.

## 5.2 OVERLAY FINDINGS

The Rose Gate PD Overlay encourages innovations in residential development and provides a greater variety in housing type and design through development standards, design guidelines, and housing prototypes that allow flexibility in design and configuration of homes. The Rose Gate PD Overlay will include a mix of lot types that appeal to a wider range of economic levels and lifestyles.

1. The Rose Gate PD Overlay is:
  - Consistent with the base zoning district of LDR. Alternative development standards and guidelines will generate creative and efficient development design. The maximum density permitted by the Low Density Residential General Plan designation is not exceeded.
  - The Project is in compliance with the applicable provisions of the City of Lodi Zoning Ordinance and accommodates flexibility in site planning and property development. The standards and guidelines set forth in this document respond to the City's desire for more creative and neighborhood-oriented development by allowing for residential development that is pedestrian friendly and includes quality housing.

2. The Rose Gate PD Overlay will produce a comprehensive development of superior quality with higher quality architectural design than would otherwise occur from more traditional development applications and will provide a clear benefit to the City.
  
3. The Rose Gate PD Overlay ensures the development will not endanger, jeopardize, or otherwise constitute a hazard to the public health safety, or general welfare, or injure other property improvements in the vicinity or base zoning district.
  
4. The Rose Gate PD Overlay is:
  - Physically suitable for the type and density of proposed development and it complements the surrounding development.
  - Adequate in shape and size to accommodate the residential development and the walls, landscape, open space parking, yards and other features generally required by the LMC and necessary to support the development.
  - Served by adequate streets to carry the quantity and type of expected traffic. Vehicle, private and emergency, will have ample access and maneuvering space as street sections will comply with City standards.
  
5. The Project has been reviewed and is in compliance with, the California Environmental Quality Act (CEQA). See Lodi Annexation Environmental Impact Report (April 2006).

**RESOLUTION NO. 13-**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LODI APPROVING THE REQUEST OF FCB HOMES FOR APPROVAL OF VESTED SUBDIVISION MAP FOR ROSE GATE SUBDIVISION, A 50-ACRE, 234-LOT, SINGLE-FAMILY RESIDENTIAL SUBDIVISION AND 232 GROWTH MANAGEMENT ALLOCATION REQUEST AT 2875 WEST LODI AVENUE**

**WHEREAS**, the Planning Commission of the City of Lodi has heretofore held a duly noticed public hearing, as required by law, on the requested Vested Subdivision application, in accordance with the Lodi Municipal Code, Section 17.74; and

**WHEREAS**, the project site is located at 2875 West Lodi Avenue, Lodi, CA 95240 (APN: 029-380-05); and

**WHEREAS**, the applicant is FCB Homes, 10100 Trinity Parkway, Suite 420, Stockton, CA 95219; and

**WHEREAS**, the applicant, FCB Homes, has filed the “Rose Gate” Vested Subdivision Map and Growth Management Application with the City of Lodi; and

**WHEREAS**, the project properties owners of record are Georgia Perlegos ETAL, P. O. Box 1823, Lodi, CA 95241; and

**WHEREAS**, the applicant, FCB Homes, has filed the “Rose Gate” Vested Subdivision Map and Growth Management Application with the City of Lodi; and

**WHEREAS**, City Council Resolution No. 2007-49 adopted by the City Council on March 21, 2007, approved the land use designation as Low Density Residential, for the project site; and

**WHEREAS**, the City Council by Ordinance No. 1793, which became effective on March 21, 2007, granted Planned Development Zone P-D(42), to allow single-family residential development for the project site; and

**WHEREAS**, the City Council by Resolution No. 2007-48, which became effective on march 21, , 2007, approved certified an Environmental Impact Report (EIR), State Clearinghouse No. 2005092096, for the project; and

**WHEREAS**, a copy of the Environmental Impact Report (EIR), State Clearinghouse No. 2005092096, is kept on file for public review within the Community Development Department by the Community Development Director at 221 West Pine Street, Lodi, CA; and

**WHEREAS**, the Vested Subdivision Map contains 50 acres, 234-lots, and is located at 2875 West Lodi Avenue, which is designated for low density residential development at up to 7 dwelling units per acre.

**WHEREAS**, the Community Development Department did study and recommend approval of said request; and

**WHEREAS**, after due consideration of the project, the Planning Commission did conditionally approve the project; and

**WHEREAS**, the Planning Commission’s recommendation is based upon the following findings and determinations:

1. The proposed design and improvement of the tentative subdivision, as conditioned, will conform to the standards and improvements mandated by the adopted City of Lodi

Public Works Department Standards and Specifications, Zoning Ordinance, as well as all other applicable standards.

2. The standard size, shape and topography of the site is physically suitable for residential development proposed in that the site is generally flat and is not within an identified natural hazard area.
3. The site is suitable for the density proposed by the tentative subdivision map in that the site can be served by all public utilities and creates design solutions for storm water, traffic and air quality issues.
4. The standard design of the proposed tentative subdivision and the proposed improvements are not likely to cause substantial environmental damage or injure fish or wildlife or their habitat in that the site has been previously disturbed by agricultural activities and no significant environmental issues or concerns were identified through the Initial Study prepared for this development.
5. The design of the proposed tentative subdivision and type of improvements are not likely to cause serious public health problems in that all public improvements will be built per City standards and all private improvements will be built per the California Building Code.
6. The design of the proposed tentative subdivision and the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed tentative subdivision.
7. The vested subdivision is conditioned to construct improvements to Lodi Avenue thereby insuring that an adequate Level of Service is maintained on the roadways within the area.
8. An Environmental Impact Reports and Mitigation Monitoring and Reporting Program, Environmental Impact Report (EIR), State Clearinghouse No. 2005092096, were prepared for this project in compliance with Public Resources Code section 21000 et seq, and were independently reviewed and certified by the City Council. All potentially significant environmental impacts were publicly disclosed and made available for comment prior to any decisions to approve any part of the whole project. On March 21, 2013, the City Council adopted an Environmental Impact Report and Mitigation Monitoring and Reporting Program for all aspects of the proposed project. all mitigation measures for the project identified in the initial study and accompanying studies are hereby incorporated into this approval.
9. The project is required to comply with all the mitigation measures outlined for the project in the Environmental Impact Report and in the Mitigation Monitoring and Report Program.
10. The vested subdivision map allows for the orderly growth of Lodi in that the Land Use and Growth Management Element allows for a maximum density of 7 dwelling units per acre and the proposed is at a density of 4.75 dwelling units per acre.
11. Said Vested Subdivision map complies with the requirements of Article 5 of the Lodi Development Code, governing subdivision maps.

**NOW, THEREFORE, BE IT DETERMINED AND RESOLVED**, by the Planning Commission of the City of Lodi hereby recommends that the City Council approve the Vested Subdivision Map, associated Development Standards for the Rose Gate Subdivision, and award FCB Homes 232 low density growth management allocation units, subject to the following development conditions and standards:

1. The property owner and/or developer and/or successors in interest and management shall, at their sole expense, defend, indemnify and hold harmless the City of Lodi, its

agents, officers, directors and employees, from and against all claims, actions, damages, losses, or expenses of every type and description, including but not limited to payment of attorneys' fees and costs, by reason of, or arising out of, this development approval. The obligation to defend, indemnify and hold harmless shall include, but is not limited to, any action to arbitrate, attack, review, set aside, void or annul this development approval on any grounds whatsoever. The City of Lodi shall promptly notify the developer of any such claim, action, or proceeding and shall cooperate fully in the defense.

2. This recommendation for approval by the Planning Commission shall not constitute an authorization to begin any construction.
3. The developer shall comply with all the applicable requirements of the City's Community Development Department including Planning and Building Divisions; Public Works, Fire and Electric Utility Departments; and all other applicable local, state and federal agencies. It is the responsibility of the applicant to check with each agency for requirements that may pertain to the project.
4. The Vesting Tentative Map shall expire within 24 months of Planning Commission approval or a time extension must be granted by the Planning Commission.
5. The Final Map shall be in substantial conformance to the approved Vesting Tentative Map, as conditioned, and that any future development shall be consistent with applicable sections of the Municipal Code.
6. The developer shall install, on each residence, minimum four-inch high block style numbers for address identification. The numbers shall be in color that is contrasting to the background surface to which they are adhered and shall be readily visible from the street during the day and night. The construction drawings for the house plans shall identify the location of the address boxes or numbers on the house façades, along with a detail or keynote that describes how the house numbers will be illuminated or made identifiable from the street.
7. The developer shall submit detailed landscape and irrigation plans (concurrently with the improvement plans) for the review and approval of the Parks & Recreation Department. The landscape plan shall include, in addition to normal landscape and irrigation details, screening of any above ground utility vaults and anti-siphon water valves.
8. Meters, hydrants, poles, etc. shall be located clear of the sidewalk and driveways or as determined by the City Engineer. Final locations and the number of such facilities shall be determined at the time the improvement plans are reviewed.
9. A conceptual fencing/wall plan shall be submitted for the entire subdivision with the grading plan and a detailed fencing/wall plan shall be submitted with the improvement plans for each phase of development. The design, height, and location of walls shall be subject to approval of the Community Development Director prior to approval of improvement plans. Where fencing is adjacent to public parks and/or trails, plans shall be approved by the Recreation Commission at the time of park plan approval. When the adjacent area is sloped, the fence/wall design shall include a 4' bench (sloped no more than 2%) along the fence/wall for maintenance purposes, as determined by the Parks and Recreation and Cultural Services Department.
10. The proposed sound wall along Lodi Avenue shall be a minimum of six (6') feet in height, excluding caps, columns and pilasters, unless a higher wall or fence is required as an environmental mitigation measure, measured to the grade of the property at the highest point within four feet (4') of said wall or fence and shall be designed to insure clear vision at all street intersections to the satisfaction of the City Engineer.

11. The project shall incorporate all applicable mitigation measures as specified in the adopted Final Revised Environmental Impact Report EIR-05-01 (State Clearinghouse No. 2005092096) for the project.
12. Pursuant to project Environmental Impact Report, State Clearinghouse No. 2005092096, prior to recordation of the final map(s) for homes adjacent to existing agricultural operations, the applicant shall submit a detailed wall and fencing plan for review and approval by the Community Development Department (Land Use Mitigation Measure 1).
13. Pursuant to project Environmental Impact Report, State Clearinghouse No. 2005092096, Agriculture Resources Mitigation Measures 2 and 3, the applicant shall provide and undertake a phasing and financing plan (to be approved by the City Council) for one of the following mitigation measures:
  - a. Identify approximately 49.64 acres to protect for a period of time to be determined (but not less than 15 years) as an agricultural use in a location as determined appropriate by the City of Lodi in consultation with the Central Valley Land Trust; or
  - b. Pay a fee equal to the value of 392 acres as determined by an independent qualified consultant retained by the City in consultation with the Central Valley Land Trust. The City will determine to whom the fee shall be paid.
14. Pursuant to project Environmental Impact Report, State Clearinghouse No. 2005092096, Biological Resources Mitigation Measures 1, 2, and 3, the applicant shall contact the San Joaquin County Council of Governments (SJCOG, Inc) for a pre-ground disturbance survey, to be performed by an SJMSCP biologist, to determine applicable Incidental Take Minimization Measures (ITMMS). The City shall not authorize any form of site disturbance until it receives an Agreement to Implement ITMMS from SJCOG, Inc. The City shall not issue a building permit for the proposed project until the San Joaquin County Council of Governments determine what, if any, Incidental Take Minimization Measures (ITMMS) apply to the project and until the San Joaquin County Council of Governments verifies all applicable ITMMS have been fully and faithfully implemented.
15. If archeological materials are uncovered during any construction or pre-construction activities on the site, all earthworks within one hundred feet (100') of these materials shall be stopped, the Community Development Department notified, and a professional archeologist, certified by the Society of California Archeology and/or the Society of Professional Archeology, shall be notified. Site work in this area shall not occur until the archeologist has had an opportunity to evaluate the significance of the find, and outline appropriate mitigation measures, if they are deemed necessary.
16. All stub end streets planned for future continuation and undeveloped cul-de-sacs shall be temporarily protected with warning barricades and redwood headers to be approved by the City Engineer.
17. The improvement plans shall reflect that all storm drain inlets constructed or modified in conjunction with this project shall be labeled "No Dumping – Drains to Canal" using thermoplastic stencils to the satisfaction of the Community Development Director.
18. The developer shall pay for and install all street name signs, traffic regulatory and warning signs, and any necessary street striping and markings required by the City Engineer. Street striping and markings shall be raised ceramic markers or thermoplastic material, as directed by the City Engineer.
19. Road or street names shall not duplicate any existing road or street name in the City, except where a new road or street is a continuation of an existing street. Road or street names that may be spelled differently but sound the same shall also be avoided. Road or

street names shall be approved by the Fire Chief and the Community Development Director.

20. All improvements, public and private, shall be designed and constructed in accordance with the most recent edition of the City Plans and all applicable state and local ordinances, standards and requirements. Should a conflict arise, the governing specification shall be determined by the City Engineer.
21. The developer shall ensure finished pad elevations are at a minimum one foot above the 100 year base flood elevation as shown on the latest Federal Emergency Management Agency (FEMA) floodplain maps for San Joaquin County, California. The developer shall be responsible for all necessary activities, applications, documentation and costs to amend floodplain maps for their development.
22. In accordance with the Growth Management and Infrastructure/Public Facilities Element of the City's General Plan, the environmental review prepared for this project, and the regulations of the applicable school districts, the Developer shall demonstrate that adequate provision is made for school facilities. To the extent permitted by law, this may include the payment of school facility mitigation fees adopted by the Lodi Unified School district, or alternative financial arrangements negotiated by agreement between the Developer and the applicable school districts.
23. A master street tree plan shall be approved by the Public Works Department for each phase of this vesting tentative subdivision map. A minimum of one street tree shall be provided for each lot within this subdivision. On corner lots, three street trees shall be provided; one on the shorter lineal frontage and two on the longer lineal frontage. Street trees shall be a species selected from the City's adopted tree list, shall be a minimum fifteen (15) gallon size, spaced at thirty (30) feet intervals, and planted as reflected in the Engineering Department's Standard Plans and Specifications, with branches above average eye level. The trees selected shall be deep rooted and drought tolerant. Location and species shall be to the approval of the Public Works Department.
24. The developer, in order to reduce tracking of mud throughout the City, shall be responsible for cleaning up or any expenses incurred by the City for cleaning up mud, debris, etc. from City streets that is attributed to this project during construction.
25. Construction activities shall be limited to the hours of 7:00 a.m. to 10:00 p.m. Monday through Sunday, consistent with the City's Ordinance.
26. The Developer shall notify all purchasers of homes or lots, either through the Department of Real Estate Subdivision Report or, if there is no Subdivision Report, through a statement signed by each buyer and submitted to the City, that the this subdivision is adjacent to an agricultural area, and as such, there are ground and aerial applications of chemicals, and early morning/night time farming operations which may create noise and dust, etc. In addition, all purchasers of homes or lots shall be made aware of the future possibility of oil and gas well exploration on surrounding and adjacent properties and that farm animals may be kept on adjacent properties that may be outside the City limits. The wording and format for notifying home buyers of this information is subject to approval by the Community Development Director.
27. All conditions of approval for this project shall be written by the project developer on all master building permit plan check sets submitted for review and approval. It is the responsibility of the developer to ensure that the project contractor is aware of, and abides by, all conditions of approval. If the subdivision is to be built out using master plans. Please follow City of Lodi, Community Development Department Policies and Procedures # B-[08]-[13] Plan Submittal - Residential Master Plans and # B-[08]-[14] Permit Processing – Production Homes.

28. No variance from any City of Lodi adopted code, policy or specification is granted or implied by this approval.

City of Lodi Fire Department

29. The developer shall comply with all applicable requirements of the California Fire Code and the adopted policies of the City of Lodi.

30. Fire apparatus access roads shall have an unobstructed width of not less than 24 feet, exclusive of shoulders, except for approved security gates in accordance with Section 503.6 of the California Fire Code and an unobstructed vertical clearance of not less than 13 feet 6 inches. (Ord. No. 1840, § 1, 11-17-2010)

31. Approved fire apparatus access roads shall be provided for every facility, building or portion of a building hereafter constructed or moved into or within the jurisdiction. The fire apparatus access road shall comply with the requirements of this section and shall extend within 150 feet (45,720 mm) of all portions of the facility and all portions of the exterior walls of the first story of the building as measured by an approved route around the exterior of the building or facility.

32. The developer shall install on-site and/or boundary water mains, fire hydrants and related services. Hydrants shall adhere to the City's standard details, with their location determined by the Fire District and City Engineer, and shall be installed and in service prior to any combustible construction on the site. Public fire hydrant spacing and distribution shall be determined as follows:

- a. At 300 feet spacing in high density, commercial, industrial zoning or high-value areas;
- b. At 500 feet spacing in low density residential areas;
- c. At 1000 feet spacing in residential reverse frontage;
- d. A fire hydrant shall be located within 200 feet of the radius point of all cul-de-sacs;
- e. Hydrants shall be required on both sides of the street whenever one or more of the following conditions exist:
  - i. Streets have median center dividers that make access to hydrants difficult, cause time delays, or create undue hazards or both;
  - ii. On major arterials where there is more than four lanes of traffic;
  - iii. Width of street in excess of 88 feet;
  - iv. The existing street being widened or having a raised median center divider in the future pursuant to the General Plan Roadway Improvement Plans for the City of Lodi.

33. An automatic sprinkler system installed in accordance with Section 903.3 shall be provided throughout all buildings with a Group R fire area.

City of Lodi Public Works Department

34. Provide a drawing showing the connection details into the Vine Street and Lower Sacramento Road wastewater mainline.

35. Provide a water sampling station(s) within the subdivision. The location of the sampling station must be approved by the Public Works Director.

36. Remove the "Connect to Existing Sewer" note on Sheet 7.

37. Provide all sizing calculations for the temporary storm drain basin and the permanent storm drain basin. Provide details regarding the operations and interoperations of the permanent basin and the temporary basin.
38. Use the 2012 City of Lodi Storm Drainage Master Plan design criteria for all calculations.
39. Slopes for all parcels within the development must flow toward the proposed streets. All stormwater must be collected within the development and cannot flow into the neighboring parcels.
40. Storm drainage from the entire right-of-way of Lodi Avenue must be collected and conveyed to the proposed storm drainage basins.
41. Provide details for the conveyance of storm water runoff from the adjacent slopes of the Woodbridge Irrigation District (WID) canal to the public storm drainage facilities.
42. Design of the storm water facilities shall convey nuisance water around the permanent basin and directly to the outfall pipeline and to the temporary storm drain basin. Ultimately the nuisance storm water flows will be conveyed to the outfall pipeline and to G-basin at DeBenedetti Park. Demonstrate that the design of ultimate offsite storm drainage outfall pipeline conforms to the existing storm drainage pipelines in Westside Drive.
43. The permanent basin will require outfall structures including a storm water pump station. All pump stations shall have mechanical trash screening capabilities (1/2-inch sphere size), oil skimming capabilities, automatic controls, flow and level measuring gauges, SCADA remote control and all weather access. SCADA communication facilities are required that connect the Control Center and each pump station to permit flow pacing between the pump stations.
44. Use the 2012 City of Lodi Water Master Plan design criteria for all calculations.
45. All water valves shall have a maximum of 600-foot spacing in residential areas, including collector streets servicing residential areas.
46. As per the Lodi Municipal Code Section 16.24.040 – Streets – Improvements to Lodi Avenue must conform to existing City design standards. Provide existing pavement section conditions for Lodi Avenue using boring methods at 10 equal-spaced intervals along the 5,000 foot project frontage. Design the future pavement section to a traffic index rating of 10.0. The project is required to reconstruct/ construct full width improvements for Lodi Avenue to and including curb and gutter on the south side (where required) including a transition from the roundabout. Approximately 2 feet of street easement shall be dedicated to the City from the parcels on the south side of Lodi Avenue to the western end of the development to accomplish this. Per Lodi Municipal Code Section 16.24.040 reimbursement shall be made by private reimbursement agreement in accordance with Chapter 16.40. (Refer to the attached ordinance amendments that are not yet publicly available.)
47. The roundabout in Lodi Avenue must be fully constructed with the first phase of development, full landscape improvements, full sidewalk improvements and a transition (including sidewalk and landscape improvements) from the roundabout easterly to the existing improvements. Per Lodi Municipal Code Section 16.24.040 reimbursement shall be made by private reimbursement agreement in accordance with Chapter 16.40.
48. Curb returns and corner cut-offs must conform to City of Lodi Standard Plans 611 and 612.
49. All streets must conform to Section 1.305 of the City Design Standards.

50. Provide all necessary traffic signs for the entire subdivision and any necessary traffic signs needed along Lodi Avenue.
51. The proposed change from 4 lanes to 2 lanes on Lodi Avenue will require a General Plan amendment. The General Plan Amendment may require a supplemental Traffic Study for this General Plan Amendment.
52. The intersection at Streets A and C and 4 will require a traffic calming measure.
53. All shared driveways will require private access and maintenance agreements that must be submitted to the City and recorded against the affected parcels.
54. Provide all dimensions and traffic striping for the proposed roundabout on Lodi Avenue. Fire Engine, garbage truck and bus turning movements must be provided.
55. Final location of temporary sewer lift station shall be approved by City Engineer.
56. Provide all design details for the proposed force main so that a determination of its acceptability can be made. No approvals of this interim wastewater service proposal are stated nor implied within these tentative map conditions.
57. Use the 2012 City of Lodi Wastewater Master Plan design criteria for all calculations.
58. Provide a detailed wastewater trunk line capacity analysis for the wastewater discharge into the Lower Sacramento Road wastewater trunk line. Developer must provide an analysis that proves the discharge from the development will not increase the wastewater flows in the Lower Sacramento trunk line beyond the City Design Standards. This analysis must account for future wastewater discharges to the Lower Sacramento Road wastewater trunk line from vacant or underdeveloped parcels upstream of the propose point of connection. Any deviation from the City Design Standards must be approved by the Public Works Director.
59. The development's wastewater will ultimately discharge to the new Westside wastewater trunk line that will convey wastewater to the City's wastewater outfall line, as shown in the City's 2012 Wastewater Master Plans. The Developer is proposing to install a temporary wastewater lift station that will discharge to the Lower Sacramento Road trunk line instead of constructing the new Westside trunk line. If the temporary connection to the Lower Sacramento Road wastewater trunk line is approved, the Developer is required to pay their fair share of the cost of the new Westside wastewater trunk line from Lodi Avenue to the existing City wastewater outfall line. Provide a cost sharing analysis for the development's fair share of the cost to construct the new Westside wastewater trunk line. Payment of the fair share cost as determined in the cost sharing analysis shall be provided prior to the first building permit final approval.
60. The private wastewater lift station shall be installed and operated by the Developer and approved by the Public Works Director. The wastewater lift station shall be temporary until the development can connect into the new Westside wastewater trunk line. The Developer shall provide plans and agreement to remove the temporary facility. The cost of making the connection to the new Westside wastewater trunk line, abandoning the temporary lift station, abandoning the temporary force main, and removing the temporary facilities and restoring the temporary lift station site shall be paid to the City prior to the first building permit final approval and placed in a City trust account. Unused funds will be returned to the Developer.
61. All operation and maintenance activities related to the private temporary wastewater lift station and appurtenant facilities shall be subject to and in conformance with Lodi Municipal Code, Chapter 13.12, Sewer Service. Developer agrees to provide evidence in the form of a binding maintenance agreement contract for monthly maintenance per City standards by a private contractor chosen by Developer and approved by the Public

Works Director. The Agreement shall require reimbursement to the City for any and all maintenance and operation services provided by City forces.

62. An overland flood release pathway shall be incorporated into the streets and circulation design plan for each subarea. For example, when any particular catch basin is obstructed or overwhelmed with water, the street drainage design (high points and low points) for that subarea shall be designed such that no water shall pond higher than the adjacent right-of-way elevation without releasing the excess water toward the planned flood release point of the subarea.
63. Relocate proposed wall at northeast corner of Street J and Lodi Avenue to follow the westerly alignment of Street L; leaving the corner landscaping lot within public right of way.
64. Provide a slope easement or retaining wall along the west boundary of the development.
65. Provide a wall easement along all parcels that will have a public masonry wall adjacent to those parcels.
66. The park amenities will require the following items:
  - a. Bike rack
  - b. Playground
  - c. Picnic tables
  - d. Picnic shelter (rental) BBQ
  - e. Trees
  - f. Turf
  - g. Irrigation booster pump
  - h. Drinking fountain
  - i. Furniture
  - j. Lights
  - k. Signs
67. Engineering and preparation of improvement plans and estimates per City Public Improvement Design Standards for all public improvements prior to final map filing. Plans to include:
  - a. Approved tentative map, signed by the Community Development Director.
  - b. Detailed utility master plans, including engineering calculations, for all phases of the development. Storm drainage facilities design shall conform to the City of Lodi Storm Water Development Design Standards.
  - c. Current soils report. If the soils report was not issued within the past three (3) years, provide an updated soils report from a licensed geotechnical engineer.
  - d. Grading, drainage and erosion control plan.
  - e. Copy of Notice of Intent for NPDES permit, including storm water pollution prevention plan (SWPPP) and WDID number.
  - f. Reverse frontage wall, landscaping and irrigation system. Minimum wall height shall be 6 feet above the adjacent pad elevation or as required by Community Development Department to satisfy General Plan requirements.
  - g. Street tree planting plan for parkway strip along lot frontages. Requires approval of the Community Development Director and Public Works Director.
  - h. All utilities, including street lights and electrical, gas, telephone and cable television facilities.
  - i. Joint trench plans.
  - j. Undergrounding of existing overhead utilities along Lodi Avenue from Lower Sacramento Road to the west end of the project parcel.

- k. Street improvements in Lodi Avenue from the intersection with Lower Sacramento Road to the end of the project site, including a transition to Sargent Road west of the project site.
- l. Traffic striping and signage modifications for Lodi Avenue.
- m. Traffic signal modifications and loop detector relocation plan at the intersection of Lodi Avenue and Lower Sacramento Road intersection including the installation of a raised median extending from the intersection westerly approximately 150-feet.

**NOTE:** A complete plan check submittal package, including all the items listed above plus the Map/Improvement Plan Submittal cover letter, Improvement Plan Checklist and engineering plan check fees, is required to initiate the Public Works Department plan review process for the engineered improvement plans.

- 68. Abandonment/removal of wells, septic systems and underground tanks in conformance with applicable City and County requirements and codes prior to approval of public improvement plans.
- 69. Installation of all public utilities and street improvements within the limits of the map, plus the following "off-site" improvements:
  - a. Street improvements in Lodi Avenue from the intersection with Lower Sacramento Road to the end of the project site, including a transition to Sargent Road west of the project site.
  - b. Installation of curb, gutter, sidewalk and street lights along the north side of Lodi Avenue.
  - c. Installation of curb, gutter and sidewalk along the south side of Lodi Avenue east of the proposed roundabout.
  - d. Installation/extension of the wastewater, water, recycled water (purple pipe) and storm drainage public mains from the intersection with Lower Sacramento Road to the west end of the project site.
  - e. Undergrounding of existing overhead utilities along Lodi Avenue from Lower Sacramento Road to the end of the project parcel.
  - f. Utility and service stubs (water, wastewater, recycled water, electric, telephone, cable, etc.) for the parcels adjacent to the west subdivision boundary and the south subdivision boundary.
  - g. Transit amenities, including, but not limited to, bus stops, bus pullouts, bus shelters and signage, in conformance with the GrapeLine Short Range Transit Plan and as approved by the Transit Manager.
  - h. Fencing along the WID Canal right-of-way per WID approval.
- 70. All public improvements to be installed within one year of final map filing under the terms of an improvement agreement to be approved by the City Council prior to final map filing. The developer will be required to provide warranty security in the amount of 10% of the value of the public improvements. The warranty period will be two (2) years commencing on the date of acceptance of the public improvements or as per condition No. 62, whichever is later.
- 71. Project design and construction shall be in compliance with applicable terms and conditions of the City's Stormwater Management Plan (SMP) and shall employ the Best Management Practices (BMPs) identified in the SMP. The State Water Resources Control Board recently adopted a new NPDES storm water permit that the City and this development must comply with.

- a. Storm Water Development Standards will be required for this project. The design of projects containing more than 10 units in a home subdivision is required to follow these Standards.
  - b. State-mandated construction site inspections to assure compliance with the City of Lodi Storm Discharge Permit are required. The fee for the inspections is the responsibility of the developer and must be paid prior to map filing or commencement of construction operations, whichever occurs first.
72. All project design and construction shall be in compliance with the Americans with Disabilities Act (ADA) and California Title 24. Project compliance with ADA standards is the developer's responsibility.
73. The City of Lodi is a participant in the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP). An application for evaluation of the project site with respect to SJMSCP requirements shall be submitted to the San Joaquin Council of Governments (SJCOG) prior to commencement of any clearing, grading or construction activities on the project site.
74. If this project is constructed in phases, the following improvements shall be constructed with the first phase:
  - a. Full length street and public utility improvements along the Lodi Avenue frontage, including undergrounding and relocation of existing overhead utilities and installation of a reverse frontage wall, landscaping and irrigation.
  - b. Traffic striping modifications in Lodi Avenue.
  - c. Transit amenities, including, but not limited to, bus stops, bus pullouts, bus shelters and signage, in conformance with the GrapeLine Short Range Transit Plan and as approved by the Transit Manager.
  - d. Fencing along the WID Canal right-of-way per WID requirements.
  - e. 10-inch water main across WID Canal at Lots 14 and 15.
75. Dedication of public utility easements as required by the various utility companies and the City of Lodi.
76. Acquisition of the following easements outside the limits of the map:
  - a. Street easements on Lodi Avenue for APN 027-400-01, 027-400-02 and 027-400-15 to accommodate installation of street frontage improvements to the approval of the Public Works Director.
77. All property dedicated to the City of Lodi shall be free and clear of all liens and encumbrances and without cost to the City of Lodi and free and clear of environmental hazards, hazardous materials or hazardous waste. Developer shall prepare and submit a hazardous materials report and shall indemnify the City against any and all hazardous materials and/or ground water contamination for all property/easements dedicated to the City.
78. Submit final map per City and County requirements including the following:
  - a. Preliminary title report.
  - b. Waiver of access rights at:
    - i. All lots adjacent to Lodi Avenue.
  - c. Standard note regarding requirements to be met at subsequent date.
79. Payment of the following:
  - a. Filing and processing fees and charges for services performed by City forces per the Public Works Fee and Service Charge Schedule.

- b. Development Impact Mitigation Fees per the Public Works Fee and Service Charge Schedule.
- c. Regional Transportation Impact Fee (RTIF) at the time of building permit issuance.
- d. Stormwater compliance inspection fee prior to map filing or commencement of construction operations, whichever occurs first.
- e. Cost Sharing Analysis for the Westside wastewater trunk line and all fees associated with the analysis. Payment of the projects portion of the cost sharing analysis will be due prior to the first building permit final approval.
- f. Private temporary wastewater lift station abandonment costs.
- g. Annexation into the City of Lodi Community Facilities District – Estimated cost is \$10,000.
- h. Reimbursement fees per existing agreements:
  - i. RA-08-01 – Reimbursement for Vintner’s Square Shopping Center

**NOTE:** The above fees are subject to periodic adjustment as provided by the implementing ordinance/resolution. The fee charged will be that in effect at the time of collection indicated above.

- 80. In order to assist the City of Lodi in providing an adequate water supply, the Owner/Developer on behalf of itself, its successors and assigns, shall enter into an agreement with the City that the City of Lodi be appointed as its agent for the exercise of any and all overlying water rights appurtenant to the proposed Rose Gate subdivision, and that the City may charge fees for the delivery of such water in accordance with City rate policies. In addition, the agreement shall assign all appropriative or prescriptive rights to the City. The agreement will establish conditions and covenants running with the land for all lots in the subdivision and provide deed provisions to be included in each conveyance.
- 81. Reverse frontage walls, landscaping and irrigation improvements Lodi Avenue and street trees in the parkways in the public rights-of-way within the subdivision boundaries are required and shall be constructed by the developer at the developer’s expense to the approval of the Public Works Director and Community Development Director. The design of the wall shall be compatible with the existing reverse frontage walls along Lower Sacramento Road.
- 82. The developer shall provide for on-going maintenance and replacement of reverse frontage walls, landscaping and irrigation improvements, street trees in the parkways, and other public services as set forth in Resolution No. 2007-59 approved by the City Council on April 4, 2007, by annexation to the City of Lodi Community Facilities District No 2007-1 prior to final map filing. All costs associated with annexation to the District shall be the developer’s responsibility. Developer shall be responsible for the regular and ongoing maintenance and replacement of the landscaping and irrigation improvements and street trees in the parkways until the first revenues are received by the City from the District.
- 83. Obtain the following permits:
  - a. San Joaquin County well/septic abandonment permit.
  - b. San Joaquin County encroachment permit for work within their right-of-way.
  - c. City of Lodi encroachment permit for work within their right-of-way.
  - d. Woodbridge Irrigation District permit for improvements within their right-of-way.

Woodbridge Irrigation District

- 84. The District owns the 100' Canal ROW along the north side of the property and has historically requested that the developer construct a chain link fence for purposes of restricting access and public safety. As a condition of the development, we would also request that restrictive covenants be placed on lots adjacent to the canal not allowing for

access gates to be cut through the protective fence. The minimum fencing requirements include a chain link fence built to WID fencing specifications as attached. Other fencing materials may be considered depending on the developers plans and may be approved by the District.

- 85. That a shallow drainage swale be constructed at the toe of the outer slope of the South Side canal road to catch rain water run-off that may occur during rain events so as to limit the run off onto lawns of the proposed subdivision. The Lodi West Subdivision on the north side of the canal is an example of what has been done in the past and has worked well.
- 86. The District requests that a non claimable canal road gate be constructed on the east and west entrances to the right of way and that the fencing ties in and conforms to the developers fencing plan for development.
- 87. The map shows that a proposed water line is to be constructed from across the canal the Lodi West Subdivision to serve the Rose Gate Subdivision. We require that an encroachment permit be filed to the District for any conduit or utility crossing the WID canal right of way.
- 88. It is noted that the Developer intends to enter into a temporary storm drainage agreement with the District for storm drainage into the District's canal system until a proper conduit can be constructed. It should be noted that this canal delivers water through its system of canal to the City of Stockton Delta Water Treatment (SWTP) plant and that canal during the irrigation season and should not be considered to carry storm water containing contaminants from the site.

**Dated: October 9, 2013**

I certify that Resolution No. 13- was passed and adopted by the Planning Commission of the City of Lodi at a regular meeting held on October 9, 2013 by the following vote:

**AYES:** Commissioners:  
**NOES:** Commissioners:  
**ABSENT:** Commissioners:

**ATTEST** \_\_\_\_\_  
**Secretary, Planning Commission**

Item 3d.

**CITY OF LODI  
PLANNING COMMISSION  
Staff Report**

---

**MEETING DATE:** October 9, 2013  
**APPLICATION NO:** N/A  
**REQUEST:** Request for Planning Commission to Recommend to the City Council Adoption of the Draft Climate Action Plan and Certify the Negative Declaration.  
**LOCATION:** City Wide  
**APPLICANT:** City of Lodi

**RECOMMENDATION:**

Staff recommends that the Planning Commission recommend that the City Council adopt the Draft Climate Action Plan and certify the Negative Declaration.

**REGULATORY FRAMEWORK:**

Acknowledging some of the climate change issues, the State of California adopted the Global Warming Solutions Act of 2006, also known as AB 32. The law requires the California Air Resources Board (CARB) to develop regulatory and market mechanisms that will reduce greenhouse gas emissions to 1990 levels by 2020. As the lead agency for implementing AB 32, in December 2008, CARB approved the AB 32 Scoping Plan outlining regulatory and market mechanisms to achieve the goal of AB 32. The plan cites local government action as an integral partner to achieving the State's goals. A number of other legislative actions support AB 32 and the overall focus on energy efficiency and climate change.

On August 18, 2010, the Lodi City Council approved the City of Lodi's participation in the Smart Valley Places Compact, a partnership among cities and other local and regional agencies and organizations from the eight counties of the San Joaquin Valley region. The purpose of this partnership was one, to work together to locally define and implement a regional plan for sustainable development for the San Joaquin Valley; and two, to pursue funding such as the Sustainable Communities Planning Grant Program. Those funds were offered through the Sustainable Communities Partnership, made up of the U.S. Departments of Housing and Urban Development (HUD), Transportation (DOT), and the Environmental Protection Agency (EPA) and were intended to support regional planning efforts that integrate housing, land use, economic and workforce development, transportation, and infrastructure investments in a manner that empowers jurisdictions to consider the interdependent challenges of economic competitiveness and revitalization; social equity, inclusion, and access to opportunity; energy use and climate change; as well as public health and environmental impacts. At their meeting on February 5, 2012, the City Council authorized the City Manager to negotiate an agreement with AECOM (consultant team) for professional services related to the preparation of a CAP and Energy Efficiency and Conservation Strategy. AECOM and the UC Davis Studio 30 began working on this project to develop a plan and specific strategies to engage Lodi residents, businesses, organizations and key stakeholders in the development of the CAP.

This Climate Action Plan (CAP) is designed to streamline environmental review of future development projects in the City of Lodi consistent with the California Environmental Quality Act (CEQA) Guidelines Section 15183.5(b) and the San Joaquin Valley Air Pollution Control District (Valley Air District) CEQA Air Quality Guidelines. The CAP identifies a strategy, reduction measures, and implementation strategies the City will use to achieve the State-recommended greenhouse gas (GHG) emissions reduction target of 15% below 2008 emissions levels by 2020.

***Project Kick Off***

The development of the CAP grew out of corroborative city staff, students from the University of California, Davis's Land Use and Natural Resources extension program, the consultant firm, and citizens

input. Key stakeholders were identified and engaged in a series of individual meetings and group workshops. Real-estate developers were invited to attend an individual “round-table” discussion. The round-table was attended by representatives of the Building Industry Association of the Delta who provided a regional perspective on development. The developers provided insight into the state of development in Lodi and the potential for measures that addressed new and existing buildings.

**Inventory and Reduction Target**

The city of Lodi’s baseline inventory is ordered by sector. A "sector" is an individual subset of the total greenhouse emission spectrum, composed of emissions relating to an economy, industry, market, or general society. The sectors that were measured in this CAP are: energy, transportation, solid waste, waste water, and water consumption. Each of these sectors is shown separately in the overall emissions spectrum to allow for specific measure development for emissions reductions.

*Inventory*

A GHG emissions inventory (Inventory) lays the groundwork for the entire CAP planning process. This Inventory catalogues GHG emissions for 2008 and projects emissions levels for 2020. To comply with state guidance, the CAP identifies an emissions reduction target for the forecast year (see Chapter 4 of the CAP). The difference between the emissions projection and the reduction target represents the necessary reduction in the amount of GHG emissions and sets the focus for the reduction measures presented in Chapter 5 of the CAP. Additional information on the Inventory is provided in Appendix A of the CAP.

In 2008, the Lodi community emitted approximately 486,628 MTCO<sub>2</sub>e. **Table 1** below reports these emissions by sector and ranks the sectors from highest to lowest.

<b>TABLE 1: BASELINE GREENHOUSE GAS EMISSIONS 2008</b>		
<b>Emissions Sector</b>	<b>MT CO<sub>2</sub>e</b>	<b>%</b>
<b>Energy Consumption</b>	<b>268,102</b>	<b>55.10%</b>
<i>Residential Electricity</i>	<i>61,295</i>	<i>12.60%</i>
<i>Residential Natural Gas</i>	<i>118,486</i>	<i>24.30%</i>
<i>Non-Residential Electricity</i>	<i>52,548</i>	<i>10.80%</i>
<b>Transportation</b>	<b>35,773</b>	<b>7.40%</b>
<i>On-Road Vehicles</i>	<b>148,624</b>	<b>30.50%</b>
<i>Off-Road Vehicles and Equipment</i>	<i>141,124</i>	<i>29.00%</i>
<b>Solid Waste</b>	<b>7,500</b>	<b>1.50%</b>
<b>Water Consumption</b>	<b>54,305</b>	<b>11.20%</b>
<b>Wastewater Treatment</b>	<b>5,231</b>	<b>1.10%</b>
<b>Municipal</b>	<b>3,649</b>	<b>0.70%</b>
<b>TOTAL</b>	<b>486,628</b>	<b>100.0%</b>

Source: Lodi Climate Action Plan

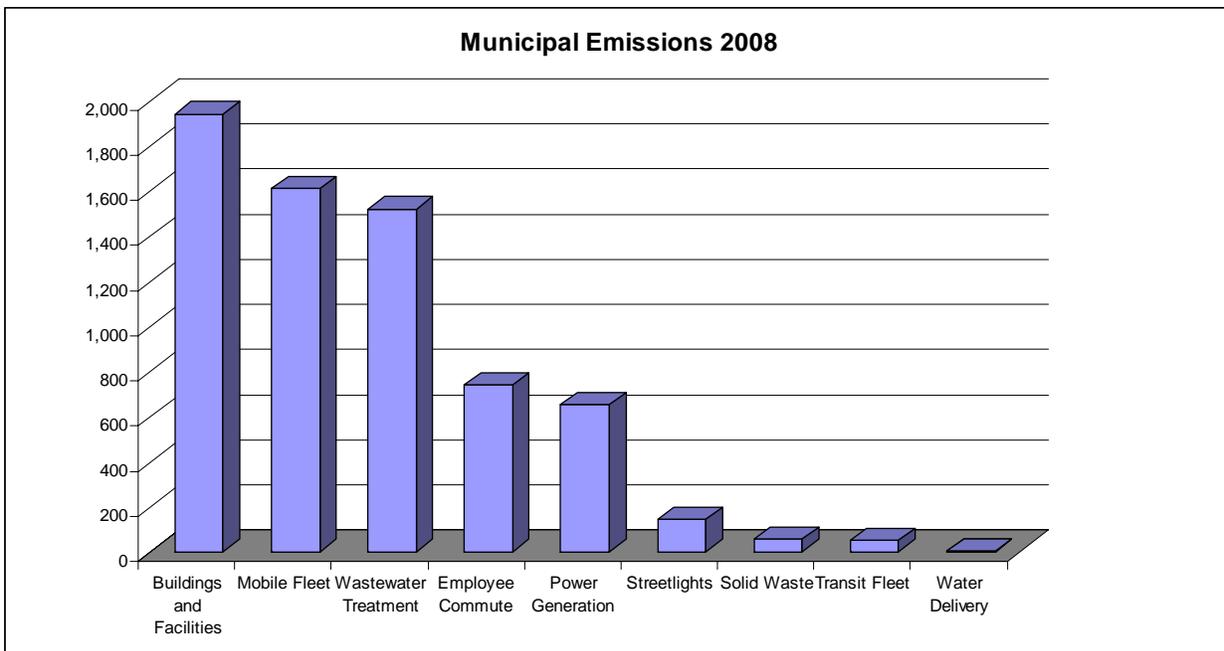

The baseline inventory guides future local policy decisions that relate to emissions within the City’s influence; therefore, energy and water consumption, and other private sector activities are excluded from further discussion. **Table 2** and **Figure 1** (following page) reflect Lodi’s municipal baseline of **6,717** MTCO<sub>2</sub>e.

TABLE 2: MUNICIPAL EMISSIONS 2008

\* Individual percentages may not add to 100 due to rounding.

**Figure 1:  
Jurisdictional Baseline Emissions by Sector**

### Greenhouse Gas Emissions Forecast

A GHG emissions forecast is an estimate of future GHG emissions based on anticipated changes in population, jobs, households, commercial activity, and driving patterns in the community. This forecast of community-wide emissions addresses 2020 and 2030, the AB 32 horizon year. Two versions of the forecast are presented below—a business-as-usual (BAU) and a State-adjusted BAU (adjusted BAU) scenario.

#### Business as Usual Forecast

The BAU forecast estimates how emissions would grow over time without influence from state, regional, and local GHG reduction efforts. This BAU forecast assumes 2008 energy consumption and energy efficiency rates and incorporates demographic information from the City of Lodi population growth estimates prepared in 2012 as part of the Impact Fee Program prepared and adopted in the fall of 2012.

TABLE 3: EMISSION INVENTORY AND PROJECTIONS						
Emissions Sector	Baseline 2008		Business-as-usual 2020		Business-as-usual 2030	
	MT CO <sub>2</sub> e	%	MT CO <sub>2</sub> e	% increase 2010-2020	MT CO <sub>2</sub> e	% increase 2010-2030
<b>Energy Consumption</b>	<b>268,102</b>	<b>55.1%</b>	<b>371,915</b>	<b>38.7%</b>	<b>458,427</b>	<b>71.0%</b>
<i>Electricity</i>	179,781	36.9%	249,396	38.7%	307,408	71.0%
<i>Natural Gas</i>	88,320	18.1%	122,520	38.7%	151,019	71.0%
<b>Transportation</b>	<b>148,624</b>	<b>29.0%</b>	<b>212,329</b>	<b>42.9%</b>	<b>276,901</b>	<b>86.3%</b>
<i>On-Road Vehicles</i>	141,124	29.0%	201,925	43.1%	264,077	87.1%
<i>Off-Road Vehicles</i>	7,500	1.5%	10,404	38.7%	12,824	71.0%
<b>Solid Waste</b>	<b>54,305</b>	<b>11.2%</b>	<b>75,333</b>	<b>38.7%</b>	<b>92,856</b>	<b>71.0%</b>
<b>Water consumption</b>	<b>5,231</b>	<b>1.1%</b>	<b>7,257</b>	<b>38.7%</b>	<b>8,945</b>	<b>71.0%</b>
<b>Wastewater Treatment</b>	<b>3,649</b>	<b>0.7%</b>	<b>5,061</b>	<b>38.7%</b>	<b>6,239</b>	<b>71.0%</b>
<b>Municipal</b>	<b>6,717</b>	<b>1.4%</b>	<b>8,075</b>	<b>20.2%</b>	<b>9,207</b>	<b>37.1%</b>
<b>Total</b>	<b>486,628</b>	<b>100.0%</b>	<b>679,970</b>	<b>39.7%</b>	<b>852,575</b>	<b>75.2%</b>

Source: Lodi Climate Action Plan

As shown in **Table 3**, without state or local action, emissions would grow 39.7% from 2010 to 2020 and by 75.2% from 2010 to 2030. Transportation emissions would grow the most amongst the sectors (42.9% by 2020 and by 86.3% by 2030). The next largest sector would be energy consumption, followed by solid waste, and water and wastewater, all of which are expected to increase 38% by year 2020. Many of these increases result from planned residential developments forecasted to occur in the 2010 General Plan. However, the market realities since 2008 significantly altered these numbers.

#### Adjusted Business as Usual Forecast

The adjusted business-as-usual (adjusted BAU) forecast estimates how state renewable energy, building energy efficiency, low-GHG transportation fuels, and vehicle fuel efficiency actions will reduce emissions in Lodi. This adjustment creates a more realistic estimate of the city's future emissions since the reductions will require little to no effort on behalf of the City, yet count toward a locally established GHG emissions reduction target. A general overview of these state reduction programs is presented below.

TABLE 4: SUMMARY OF ADJUSTED BUSINESS AS USUAL EMISSIONS FORECAST		
State Reduction Summary	2020 (MT CO <sub>2</sub> e/yr)	2030 (MT CO <sub>2</sub> e/yr)
<b>Energy Efficiency</b>		
<i>Renewable Portfolio Standard (RPS)</i>	31,424	38,733
<b>Transportation</b>		
<i>AB 1493 (Pavley I)</i>	44,674	92,650
<i>AB 1493 (Pavley II)</i>	3,284	3,488
<i>EO-S-1-07 Low Carbon Fuel Standard (LCFS)</i>	19,222	24,832
<b>Water</b>		
<i>SB 7x Water Conservation</i>	1,271	1,523
<i>% Business-As-Usual</i>	14.9%	19.1%
<b>SUBTOTAL STATEWIDE REDUCTIONS</b>	<b>99,875</b>	<b>161,227</b>

Source: Lodi Climate Action Plan

As shown in **Table 4**, implementation of the above-listed state programs would reduce BAU emissions by 92,664 MTCO<sub>2</sub>e in 2020. Most of these reductions come from the Pavley standards and cleaner Electric Utility Department pursuant to the RPS. State and federal actions that reduce communitywide emissions within the City of Lodi will make it easier for the community to achieve 2020 and 2030 emission reduction goals. As shown in Table 4 with implementation of State and federal actions, communitywide emissions would be 580,094 MT CO<sub>2</sub>e/yr in 2020 and 691,348 MT CO<sub>2</sub>e/year in 2030.

#### *Reduction Target*

The City of Lodi has chosen to utilize an efficiency based emissions target with the CAP. The logic behind the efficiency targets is that if all California communities achieved this level of efficiency on a “fair-share” per service population basis, then the State would achieve its AB 32’s 2020 GHG reduction goals. The target metric is calculated by dividing total land use related statewide emissions by the sum total of population and jobs projected in the State in the horizon. The CAP establishes a target of improving communitywide per service population emissions efficiency to 4.5 MT CO<sub>2</sub>e/ service population/ year by 2020 and to 3.0 MT CO<sub>2</sub>e/ service population/ year. These goals demonstrate the City’s commitment to make a fair-share contribution to state climate protection efforts and demonstrate a trajectory towards an emissions level in-line with State mandates.

#### **Reduction Measures**

Measures were developed by (a) evaluating existing community conditions; (b) identifying emission reduction opportunities within the community; and (c) reviewing best practices from other jurisdictions and organizations. Two categories of GHG reduction policies are presented in this CAP: (1) existing activities and (2) CAP measures and actions. Existing activities include projects or programs enacted before or since the 2008 baseline year. CAP measures and actions were created for this document through a collaborative planning process. The City will implement these measures and actions through new and existing programs, standards for new development, and programs that improve the efficiency of existing development.

Measures are grouped into five strategy areas that represent the primary ways to reduce communitywide GHG emissions in Lodi. Strategy areas are as follows:

- **Energy Efficiency** recommends ways to increase energy efficiency in existing buildings and systems; and increase the use of renewable energy.
- **Transportation** encourages alternatives to driving alone by car; promotes transit as a viable transportation mode; and greater travel efficiency.
- **Solid Waste** increases organic waste diversion to decrease methane emissions.
- **Water** recommends actions to support state mandated goals to reduce water consumption and the energy required to collect, store, distribute, and treat water and wastewater.

- **Green Infrastructure** uses urban vegetation to off-set the urban heat island effect, thereby reducing building energy use.

<b>TABLE 5: REDUCTIONS FROM QUANTIFIED LOCAL MEASURES</b>		<b>2020 (MT CO<sub>2</sub>e/yr)</b>	<b>2030 (MT CO<sub>2</sub>e/yr)</b>
<b>Energy Efficiency</b>			
Energy Efficiency Retrofits			
E-1.1	LEU Energy Conservation Programs	7,474	13,919
E-1.2	Energy Efficiency Financing	175	262
E-1.3	Low-Income Weatherization	175	262
Building Systems Efficiency			
E-2.1	Energy Management Systems	1339	4,437
E-2.2	Commercial Building Commissioning	1,698	2,094

T-1.1	Telecommuting and Alternative Work Schedules	3,080	4,134
T-1.2	Reduced Parking Minimum Requirements	527	240
T-1.3	Carsharing	85	109
T-1.4	Transit Improvements	13,717	18,571
T-1.5	Ridesharing	1,558	2,099
<b>Subtotal</b>		<b>18,967</b>	<b>25,153</b>
<b>Solid Waste</b>			
Waste Diversion			
SW-0.0	Methane Capture**	7,458	7,748
SW-1.1	Organic Waste Diversion	1,671	5,511
<b>Subtotal</b>		<b>9,129</b>	<b>13,260</b>
<b>COMMUNITYWIDE TOTAL</b>		<b>44,481</b>	<b>67,765</b>

Source: Lodi Climate Action Plan

The combination of statewide reduction described in Table 4 and the communitywide reduction measures detailed above in Table 5 result in overall reduction of greenhouse gas emissions 15% by 2020 and 37% by 2030.

### **SUMMARY OF REDUCTIONS:**

#### Energy:

In 2008, the city's consumption of electricity for appliances, lighting and cooling, and combustion of natural gas for heating, cooking, and other processes within residential, commercial, and industrial buildings generated 58% (295,649 MT CO<sub>2</sub>-e) of Lodi's total GHG emissions. Of the total energy consumption in Lodi, residential energy use accounted for 39% (113,843 MT CO<sub>2</sub>-e) whereas non-residential energy use accounted for 61% (181,806 MT CO<sub>2</sub>-e). The CAP's energy efficiency measures are primarily focused on efficient use of electricity, though some measures will also result in natural gas savings. Measures include retrofits of existing residential and commercial buildings, building system efficiency upgrades, streetlight upgrades, building shade tree planting, and increasing renewable energy

use. The total GHG emission reduction potential of the energy efficiency strategy is 16,386 MT CO<sub>2</sub>e/yr in 2020 and 29,352 MT CO<sub>2</sub>e/yr in 2030.

#### Transportation and Land Use:

Transportation is the second largest sector in Lodi's baseline inventory, producing 29% (148,624 MT CO<sub>2</sub>-e) of Lodi's total GHG emissions (514,175 MT CO<sub>2</sub>-e) in 2008. Emissions in this sector are primarily the result of the combustion of fossil fuels and are determined largely by the number of vehicle miles traveled (VMT) by residents and employees. The best practices for reducing transportation-related greenhouse gas emissions involve reducing the number of vehicle trips through various transportation demand management (TDM) strategies and enhancing the viability of transit and other forms of alternative transportation. In addition, transit-oriented development and mixed-use developments result in denser uses near commercial centers that contribute to decreased vehicle trips. The greenhouse gas reduction strategies presented in this CAP primarily focus on TDM strategies and transit system improvements to reduce greenhouse gas emissions. The total GHG emission reduction potential of the transportation strategy is 18,967 MT CO<sub>2</sub>e/yr in 2020 and 25,153 MT CO<sub>2</sub>e/yr in 2030.

#### Solid Waste:

Waste disposal creates emissions when organic waste (e.g., food scraps, yard clippings, paper, and wood products) is buried in landfills and anaerobic digestion takes place, emitting methane. In Lodi, 11% of GHG emissions are associated with solid waste generation and disposal in landfills. Construction waste accounts for approximately 29% of the waste stream statewide, and includes items such as lumber, drywall, metals, masonry, carpet, plastics, pipes, rocks, and dirt. The CAP's waste diversion measures seek to divert organic waste from landfills by reusing construction materials when possible and increasing communitywide participation in food scrap and yard waste composting. The total GHG emission reduction potential of the waste strategy is 9,129 MT CO<sub>2</sub>e/yr in 2020 and 13,260 MT CO<sub>2</sub>e/yr in 2030.

#### Water:

Water-related GHG emissions are mainly caused by energy used to pump, transport, heat, cool, and treat potable water. Emissions associated with this energy use accounted for approximately 1% of the communitywide GHG inventory. Water supplies are expected to decline in the future, so water conservation strategies have the double benefit of reducing GHG emissions and aligning demand with future water availability. The measures included in this section quantify the greenhouse gas emissions reductions of conservation programs that are already underway in the city.

#### Green infrastructure:

Green infrastructure refers mainly to the open spaces and vegetation that provide places for recreation, wildlife habitat, and relief from the heat of the sun. The term can also refer to building-integrated vegetation projects, such as green walls and green roofs. There are numerous benefits to planting trees and increasing vegetated surfaces, including reduced surface runoff, increases in natural habitat, reduced urban heat island effect and opportunities for carbon sequestration. While vegetation-related carbon sequestration is known to reduce greenhouse gases in the atmosphere, the precise level to which this occurs is not well understood and difficult to quantify at this time. As a supplement to the quantified measures in this CAP, two measures are included in the Green Infrastructure section that are not quantified, but rather focus on environmental stewardship and education through local agency partnerships and demonstration projects.

#### Reductions since 2008 Baseline

The City of Lodi has a proven history of developing and implementing GHG reduction activities. Emissions reductions from these activities will take place regardless of the development of the CAP. They are included in this plan because the City has not previously quantified them, and they count toward achievement of the GHG emissions reduction target. These measures also highlight how proposed CAP measures build upon existing efforts. Existing efforts include "waste reduction", "new multi-family development", "Bike Master Plan", and implementation and enforcement of the California Green Building Code.

**IMPLEMENTING THE PLAN:**

For discretionary projects seeking to use CEQA streamlining provisions, the City may require measures in the CAP as mandatory conditions of approval or as mitigation identified in a mitigated negative declaration or in an environmental impact report, as appropriate, on a project-by-project basis. This approach allows the City to ensure that new development can benefit from CEQA streamlining provisions while also ensuring that the City can achieve the reduction targets outlined in this plan.

**GENERAL PLAN CONSISTENCY:**

The City of Lodi’s 2010 General Plan calls for preparation and adoption of a Climate Action Plan. The proposed Climate Action Plan fulfills one of the several policy directives outlines in the General Plan.

**ENVIRONMENTAL REVIEW:**

The Planning Division conducted an initial environmental assessment of the project in accordance with the California Environmental Quality Act (CEQA). Staff determined that the project will not have a significant impact on the environment and therefore a Negative Declaration is prepared. An Initial Study and Negative Declaration was drafted and circulated between July 12, 2013 and August 12, 2013. They City received no comment during the public review period. Therefore, a Negative Declaration has been proposed as an adequate environmental documentation for the Climate Action Plan.

**STAKEHOLDER CONSULTATION**

Planning staff and consultant met with representatives from the local individuals, developers, citizens, civic groups, environmental groups, and the governmental affairs personnel from the Building Industry Association to describe the CAP and receive comment. The input from these community outreach efforts was used to develop new goals and policies that have been incorporated into a draft Climate Action Plan. In addition, the City presented the document to the Planning Commission at its meeting of September 11, 2013, which was published in the paper and notices were sent to stakeholders and interested parties.

**PLANNING COMMISSION ACTIONS:**

After the Commission completes its review of the proposed Draft Climate Action Plan, staff recommends that the attached draft resolution be adopted making the recommendation to the City Council to adopt the Draft Climate Action Plan and certify the proposed Negative Declaration as adequate environmental documentation for the project. Any additional changes requested by the Commission would be included in the motion to approve the resolution.

**PUBLIC HEARING NOTICE:**

Legal Notice for the Climate Action Plan and the Negative Declaration was published on Lodi Sentient newspaper on Saturday, September 28, 2013 and eleven (11) notices were sent via email and US Post to stakeholders and interested parties as required by Government Code §65091 (a) (3).

**ALTERNATIVE PLANNING COMMISSION ACTIONS:**

- Approve with additional/different conditions
- Deny the Use Permit request
- Continue the request

Respectfully Submitted,

Concur,

Immanuel Bereket  
Associate Planner

Konradt Bartlam  
Community Development Director

**ATTACHMENTS:**

1. Draft Climate Action Plan
2. Project Initial Study/Negative Declaration
3. Draft Resolution

# City of Lodi

## Climate Action Plan

Prepared by  
AECOM Design + Planning

For

City of Lodi  
221 West Pine Street  
Lodi, CA 95240

## **Chapter 1-Introduction: Planning for Energy Efficiency**

The City of Lodi is a diverse community that is passionate about maintaining the city's small town atmosphere, preserving its surrounding agricultural lands, and protecting its natural resources. The City developed this Climate Action Plan (CAP) as part of the General Plan process to serve as a guide for a community-wide effort to increase energy and resource efficiency, while following the State of California's guidance regarding the reduction of greenhouse gas (GHG) emissions. The CAP provides a strategic framework for the development of measures, policies and programs across all sectors that aim to reduce greenhouse gas emissions resulting from communitywide and municipal government operations. The strategy presented in this CAP is unique to Lodi's specific community context so as to be both feasible and implementable.

## What is a CAP?

A CAP (Climate Action Plan) is a tool that many cities in California are using to quantify their share of statewide GHG emissions and establish action steps toward achieving a local emissions reduction target. A CAP provides a set of strategies intended to guide community efforts to reduce GHG emissions, typically through a combination of statewide and local actions. Figure 1.1 shows the typical steps included in the CAP process

A CAP contains community-specific GHG emission inventories and forecasts to establish a starting point and probable future emissions levels if no action is taken (Step 1). A reduction target is then defined to provide an aspirational goal for improvement (Step 2). Emission reduction measures and implementation programs are then written to help the city meet its goal by achieving the reduction target (Step 3). Upon adoption of the CAP, the jurisdiction takes action to implement the reduction measures (Step 4), monitor their progress towards achievement of the reduction target (Step 5), then evaluate effectiveness, celebrate their successes, and use the monitoring results to make adjustments to CAP measures to improve performance (Step 6). This CAP represents the City's progress on Steps 1-3.

Figure 1.1 Steps in the CAP Process

## Purpose

This CAP is the City's first step in the development of a long-range, comprehensive plan to move from business-as-usual practices to more efficient use of energy, the transportation network, and water, and reduced waste. The primary objectives of the CAP process are to contribute to the State's climate protection efforts and to provide California Environmental Quality Act (CEQA) review streamlining benefits for development projects within the city limits.

This CAP provides a summary of Lodi’s greenhouse gas emissions inventory and describes how the City will achieve reductions through local actions that contribute to the statewide reduction target defined in Assembly Bill (AB) 32, the California Global Warming Solutions Act of 2006, CEQA guidelines, and other State guidance.

The CAP aims to:

- + Support the community vision described in Lodi’s 2010 General Plan of a centralized, compact urban form, safe and comfortable walking and bicycling facilities, smart street designs, and revitalized building stock
- + Leverage existing programs available through Lodi Electric Utility (LEU) and various state departments and agencies to encourage voluntary implementation of CAP measures
- + Reduce building operating costs through reduced resource consumption; and
- + Provide CEQA streamlining to reduce barriers to new development

## Chapter Contents

The CAP consists of five chapters, 1) Introduction, 2) Community Context, 3) Baseline Inventory and Projections, 4) Greenhouse Gas Reduction Strategy, and 5) Implementation. The contents of each chapter are briefly described below:

- + **Chapter 1- Introduction** provides a summary of the CAP development process and describes the City’s rationale for creating the CAP. This chapter also describes the potential impacts Lodi may face as a result of climate change and the benefits that the community will realize upon implementation of the greenhouse gas reduction strategy (defined in Chapter 4). This Chapter also provides a summary of statewide climate change legislation, the CAP’s relationship to the General Plan and the potential for CEQA “tiering”.
- + **Chapter 2- Community Context** describes how Lodi’s unique community context played an integral role in the development of the measures in this CAP. This chapter explains how the climate zone, the age of the existing building stock and the local economy relate to GHG reduction measures found in this CAP. This Chapter also describes how successful implementation of the CAP depends on reducing communication and information barriers for certain demographic groups through targeted outreach efforts.
- + **Chapter 3- Baseline Inventory and Projections** outlines key steps taken to develop the CAP, including the 2008 baseline GHG inventory, projecting future

emissions in 2020 and 2030, setting a communitywide GHG emissions target for 2020 and a long-range target for 2030. This chapter also describes the anticipated local emissions reductions resulting from implementation of State and federal actions.

- + **Chapter 4- Greenhouse Gas Reduction Strategy** addresses the five main reduction strategies; building energy efficiency, transportation, water and wastewater, solid waste, and green infrastructure. Each measure contains a description of how the measure reduces emissions and how existing programs can be leveraged in combination with the development of new efforts to achieve the reductions estimated in this CAP. The measures also provide action steps to achieve implementation, a description of co-benefits associated with the measure and the approximate range in cost to the private and public sectors.
- + **Chapter 5- Implementation** describes the process to monitor the City’s progress toward achieving their GHG reduction target. This chapter identifies monitoring procedures, plan update processes and other steps to ensure successful implementation.

## Climate Change Science

The United Nations International Panel on Climate Change (IPCC), defines “climate change” as “a change in the state of the climate that can be identified (e.g. using statistical tests) by changes in the mean and/or the variability of its properties, and that persists for an extended period, typically decades or longer.”<sup>i</sup> The properties of GHGs are such that they retain heat in the atmosphere, which would otherwise escape to space. GHGs accumulate in the atmosphere when they are emitted faster than they can be naturally removed, and that accumulation prompts changes in the climate system. Once emitted into the atmosphere, GHGs influence the Earth’s energy balance for a period of decades to centuries.<sup>ii iii</sup>

According to trends identified by the United States Global Change Research Program, average global temperatures and sea level have increased over the last fifty years as a result of an increase in greenhouse gasses in the atmosphere and are projected to continue to rise over the next century<sup>iv</sup>. If the average temperature of the Earth continues to rise, there may be implications on both a global and local level. Potential implications of global climate change include:

- + **Global Impacts:** melting of the polar ice caps may cause infrastructural damage along the coast as the global sea level rises. Increased temperatures may create more erratic weather patterns and an increase

in extreme weather systems. Disrupted seasonal patterns, ocean acidification and increased flooding could lead to inundation of aquatic freshwater habitats and affect the status of flora and fauna species worldwide.

- + **Local Impacts:** The Central Valley may experience intense heat waves, reduced precipitation, more frequent drought conditions, early melting of the snow pack in the Sierras and disrupted seasonal patterns which could affect farming practices as well as natural habitats.

The California legislature passed legislation (addressed below) based upon the findings of the IPCC, the U.S. Global Change Research Program, and the National Research Council of the U.S. National Academy of Sciences. The development of CAPs in California, in general, is based upon the actions of the California legislature and its reliance on these findings. For further information on Climate Science, please visit the California Climate Change Portal at <http://www.climatechange.ca.gov/>.

## Local Benefits of Addressing GHG Emissions

Planning efforts intended to reduce GHG emissions through resource efficiency and conservation measures often have multiple co-benefits that will improve the quality of life for community members in Lodi. While some co-benefits are qualitative, others are quantifiable improvements over current conditions.

Although the following list is in no way exhaustive of the myriad co-benefits related to climate action planning, this plan references them to illustrate the overlapping benefits of various CAP measures. Overall, these co-benefits:

- + Strengthen local economic development (e.g., CEQA streamlining/tiering, transparent development requirements, job creation);
- + Improve the downtown and neighborhood experience;
- + Protect and preserve agricultural lands by promoting smart growth;
- + Preserve underground aquifers by reducing water use;
- + Improved air quality and resulting public health benefits;
- + Protect and enhance natural habitat; and
- + Potential long-term savings for residents resulting from reduced energy use.

Additional co-benefits are discussed in Chapter 4-Greenhouse Gas Reduction Strategy. Each measure is assigned one or more co-benefits which may incentivize residents to participate in the programs that are proposed in this CAP.

## Public Outreach

This CAP was developed in collaboration with students of the University of California, Davis's Land Use and Natural Resources extension program, who played a vital role in planning and organizing the public outreach process. Key stakeholders were identified and engaged in a series of individual meetings and group workshops.

Real-estate developers were invited to attend an individual "round-table" discussion. The round-table was attended by representatives of the Building Industry Association of the Delta and FCB Homes who were able to provide a regional perspective on development, as well as Tokay Development, a local developer. The developers provided insight into the state of development in Lodi and the potential for measures that addressed new and existing buildings.

Discussions were also held with local businesses and institutions, including Pacific Coast Producers, the Lodi Unified School District (LUSD), Lodi Memorial Hospital, the Wine and Grape Commission and Lodi Citizens in Action. Some representatives expressed an interest in energy efficiency technologies; as a result, this CAP includes measures to engage these organizations in energy retrofit assistance programs and demonstration projects. Other representatives provided insight into constraints to energy efficiency, such as food processing and hospital sanitation requirements, and how to frame the measures in the CAP to alleviate the concerns of some local interest groups.

The Farmer's Market provided a means of engaging residents (adults and children), including a survey on potential energy efficiency measures, alternative transportation and solid waste disposal. Children were engaged with a trivia game involving a spinning wheel with randomly selected questions. To gauge children's understanding of recycling, composting, energy saving behaviors in the home and the environmental benefits of riding their bikes or walking to school.

Several key conclusions, described below, were drawn from the public outreach process, which informed the development of measures within this CAP.

## Energy Efficiency

While Lodi Electric Utility (LEU) offers rebates for the purchase of energy efficient appliances and home energy efficiency upgrades, LEU does not currently have a program to provide

financial assistance such as loans or grants. Rebates absorbed rapidly each year and outreach at the farmer’s market indicated that additional financial resources would encourage residents to upgrade their homes. Barriers to increased residential energy efficiency that were identified through public outreach include:

- + Limited understanding of co-benefits;
- + Lack of financing options (i.e. loans and grants);
- + Program awareness; and
- + Language and technological barriers.

LEU’s Lodi Energy Efficiency Financing (LEEF) program involves a revolving loan fund that commercial customers can use to finance energy efficiency retrofits, paying off the balance of their monthly utility bill. This program could be expanded to increase retrofit financing options for commercial and industrial customers.

Lodi has historically experienced a slow rate of development with growth occurring at less than 2% over the past seven years; a trend which City officials expect will continue over the next 5-7 years. As a result GHG reductions associated with energy efficient new developments will not be significant by horizon years 2020 and 2030. Reductions will therefore need to be achieved by reinvesting in the existing vacant or underutilized building stock which will not only improve energy efficiency in homes and businesses, but provide more local job opportunities and reduce the number of people commuting by car.

## Transportation

While residents agree that Lodi is very walkable and bike-friendly, most residents commute by car to work outside of Lodi. Residents indicated that they may drive less if:

- + bus service was offered more frequently
- + regional connectivity was enhanced
- + bicycle awareness was promoted to enhance safety

Transportation Demand Management (TDM) programs exist in some businesses and institutions in Lodi, however; participation is typically low.

Figure 1.2 Studio 30 Students and the “Wheel of Awesome”

*The “Wheel of Awesome” engaged children at the Farmer’s Market in the CAP process. After spinning the wheel, the children were asked a question that related to various sectors in the CAP, such as “Do you walk or ride your bike to school?” or “Have you ever heard of composting?” These questions helped to gauge the children’s level of awareness of these concepts and informed the development of several outreach and demonstration measures.*

## Solid Waste

While residents in Lodi typically responded that they “always” recycle, few survey participants were familiar with the term “composting”. The Lodi Unified School District had a composting program in the past and while the program was discontinued due to budgetary issues they would like to re-instate it in the future. Lodi’s local fruit canning and dairy industries send large amounts of organic solid waste to the landfill each year.

## Water

As residents transition to tiered rate pricing with Lodi’s Water Meter Program, the City’s new Sustainable Water Use Guide could be leveraged to encourage residential water conservation practices.

While the City requires the installation of recycled water pipes in all new development, there is currently no distribution system in place to deliver the water to its larger commercial customers for irrigation and other non-potable water needs.

## Green Infrastructure

Local businesses have expressed interest in partnering with the City for a building-integrated vegetation demonstration project.

## Planning Context

Many cities in California are using CAPs to quantify their share of statewide GHG emissions and establish action steps toward achieving a local emissions reduction target. CAPs typically address emissions targets through reduced dependency on fossil fuels and nonrenewable energy sources, and through increases in the efficient use of the energy that is consumed. CAPs also provide a way to connect climate change mitigation (GHG reduction) to climate adaptation, community resilience, and broader community goals.

In Lodi, most GHG emissions come from energy used in buildings and gasoline burned in motor vehicles, with water and waste related emissions contributing relatively smaller proportions. Lodi’s CAP examines the communitywide activities that result in GHG emissions and establishes strategies that help reduce those emissions in future and existing development through both voluntary and mandatory actions.

Many of the strategies included in this plan, in addition to reducing GHGs, will also help make Lodi a more attractive place to live – lowering energy and water bills through conservation, improving bike and pedestrian facilities, improving air quality, and reducing waste generation to extend the lifetime of local landfills.

## Lodi Climate Action Plan

## California Climate Change Actions

Since the 1970's California has been a leader in environmental health and climate change legislation. In 2005 Governor Schwarzenegger signed Executive Order (EO) S-3-05, which recognizes California’s vulnerability to a reduced snowpack, exacerbation of air quality problems, and potential sea-level rise due to a changing climate.

To address these concerns, the governor established targets to reduce statewide GHG emissions to 2000 levels by 2010, to 1990 levels by 2020, and to 80% below 1990 levels by 2050.

In 2006, California became the first state in the country to adopt a Green House Gas reduction target through AB 32. This law codifies the EO S-3-05 requirement to reduce statewide emissions to 1990 levels by 2020. AB 32 resulted in the 2008 adoption by the California Air Resources Board (ARB) of a Climate Change Scoping Plan (Scoping Plan), outlining the State’s plan to achieve emission reductions through a mixture of direct regulations, alternative compliance mechanisms, different types of incentives, voluntary actions, market based mechanisms, and funding. The Scoping Plan addresses similar areas to those contained in this CAP, including transportation, building energy efficiency, water conservation, waste reduction, and green infrastructure.

AB 32 engendered several companion laws, referred to as statewide actions throughout this plan, that represent a significant source of estimated GHG reductions for the City. These actions include:

- + **Renewable Portfolio Standard (RPS)** established increasingly stringent Renewable Portfolio Standard requirements for California utilities
- + **2013 California Title 24** details energy efficiency standards for residential and non-residential development
- + **AB 1109** established efficiency standards for residential and commercial lighting products
- + **SB 7X** required water management districts to reduce per capita water consumption
- + **AB 1493** established emission performance standards for motor vehicles
- + **EO-S-1-07** established performance standards for the carbon intensity of transportation fuels
- + other vehicle efficiency regulations

Additional descriptions of these and other legislative actions are provided below. At the time of plan preparation, the City estimated the GHG emission reductions associated with AB 1493, EO-S-1-07, the Renewable Portfolio Standard (RPS), AB 1109, and other discrete vehicle efficiency programs (see Chapter 3 for GHG emission reductions associated with these programs). In the future, as the regulatory framework surrounding AB 32 grows, it may be possible to evaluate a wider range of statewide reductions.

## Renewable Portfolio Standard

SB 1078, SB 107, and EO-S\_14\_08 have established increasingly stringent RPS requirements for California utilities. RPS-eligible energy sources include wind, solar, geothermal, biomass, and small-scale hydro.

- + **SB 1078** required investor owned utilities to provide at least 20 percent of their electricity from renewable resources by 2020.
- + **SB 107** accelerated the timeframe to take effect in 2010.
- + **EO-S\_14\_08** increased the RPS further to 33 percent by 2020.

## California Title 24

Title 24 of the California Code of Regulations dictates how new buildings and major remodels are constructed in California. Title 24, Part 6 is a component of Title 24 that details energy efficiency standards for residential and non-residential development. It is updated on approximately a three-year cycle. The State will be increasing building energy conservation requirements through adoption of the 2013 Title 24 standards, which will go into effect beginning in 2014. It is estimated that these revisions to the current 2008 Title 24 standards will result in energy consumption reductions of 25% over the current standards.

## AB 1109

AB 1109, known as the Lighting Efficiency and Toxics Reduction Act, established requirements for reducing lighting energy usage in indoor residences and state facilities by no less than 50% by 2018, and a 25% reduction in commercial facilities by the same date.

**Figure 1.3 Wind Turbines**

To achieve these efficiency levels, the California Energy Commission would apply its existing appliance efficiency standards to include lighting products, as well as require minimum lumen/watt standards for different categories of lighting products. The bill expands existing incentives for energy efficient lighting. The bill also requires manufacturers to reduce the levels of toxins in lighting products, such as mercury in fluorescent and lead in incandescent bulbs.

## **SB 7X**

SB 7x requires the state to achieve a 20 percent reduction in urban per capita water use by the end of 2020. The bill also requires each urban retail water supplier to develop both interim and long term urban water use targets. Alameda County Water District is in the process of setting a plan to help achieve these targets, and has been closely involved in the development of the CAP to see how it can help achieve this water reduction goal. SB 7x also creates a framework for future planning and actions for urban and agricultural users to reduce per capita water consumption 20 percent by 2020.

## **AB 1493 (Pavley)**

California's mobile-source GHG emissions regulation for passenger vehicles was signed into law in 2002. This bill would require the Air Resources Board (ARB) to set emission standards for greenhouse gases, with no mandate for specific technology. In doing so, the ARB is to consider cost-effectiveness, technological feasibility, economic impacts, and mandate maximum flexibility to manufacturers.

## **EO-S-1-07 - The Low Carbon Fuel Standard (LCFS)**

EO-S-01-07 reduces the carbon intensity of California's transportation fuels by at least ten percent by 2020. The LCFS is a performance standard with flexible compliance mechanisms that incentivizes the development of a diverse set of clean, low-carbon transportation fuel options to reduce GHG emissions.

## **Vehicle Efficiency Regulations**

ARB has adopted several regulations to reduce emissions through improved vehicle efficiency. The following two regulations were quantified and included in the CAP calculations.

### **Tire Inflation Regulation**

On September 1, 2010, ARB's Tire Pressure Regulation took effect. The purpose of this regulation is to reduce GHG emissions from vehicles operating with under-inflated tires by inflating

them to the recommended tire pressure rating. The regulation applies to vehicles with a gross vehicle weight rating (GVWR) of 10,000 pounds or less. Under this regulation, automotive service providers must meet the following requirements:

- + Check and inflate each vehicle's tires to the recommended tire pressure rating, with air or nitrogen, as appropriate, at the time of performing any automotive maintenance or repair service. Indicate on the vehicle service invoice that a tire inflation service was completed and the tire pressure measurements after the service were performed.
- + Perform the tire pressure service using a tire pressure gauge with a total permissible error no greater than + two (2) pounds per square inch (psi).
- + Have access to a tire inflation reference that is current within three years of publication.
- + Keep a copy of the service invoice for a minimum of three years, and make the vehicle service invoice available to the ARB, or its authorized representative upon request.

## **Heavy-Duty Vehicle GHG Emission**

In December 2008, ARB adopted a new regulation to reduce GHG emissions by improving the fuel efficiency of heavy-duty tractors that pull 53-foot or longer box-type trailers. Fuel efficiency is increased through improvements in tractor and trailer aerodynamics and the use of low rolling resistance tires. The regulation is expected to reduce approximately 1 million metric tons of carbon dioxide-equivalent emissions statewide by 2020.

Over the 11 years between 2010, when the rule went into effect, and the end of 2020, it is estimated that truckers and trucking companies will save about \$8.6 billion by reducing diesel fuel consumption by as much as 750 million gallons in California, and 5 billion gallons across the nation. The tractors and trailers subject to this regulation must use U.S. Environmental Protection Agency SmartWaycertified tractors and trailers, or retrofit their existing fleet with SmartWayverified technologies. These requirements apply to both California-registered trucks and out-of-state registered trucks that travel to California.

## **Relationship to the General Plan**

Lodi is among many other cities and counties in California that are addressing the State's greenhouse gas reduction goals in their general plans. The City's policy commitment includes encouraging higher density, mixed-use and infill development in

appropriate locations, energy efficiency, and renewable energy development that contribute to GHG reduction strategies contained in the CAP. Since GHG emissions are a cross-cutting issue addressed by many General Plan elements, the CAP as a whole is generally considered an implementation measure for the General Plan. This structure allows the City to update the CAP on an ongoing, as-needed basis to ensure that the City's climate protection efforts reflect both current legislation and emerging best practices.

## Relationship to the California Environmental Quality Act

Local governments may prepare a Plan for Reduction of Greenhouse Gases that is consistent with AB 32 goals. By preparing such a plan, the city can streamline CEQA review of subsequent plans and projects consistent with the GHG reduction strategies and target in the plan. To meet the standards of a qualified GHG reduction plan, Lodi's CAP must achieve the following criteria (which parallel and elaborate upon criteria established in State CEQA Guidelines Section 15183.5[b][1]):

- + Completing a baseline emissions inventory and projecting future emissions
- + Identifying a community-wide reduction target
- + Preparing a CAP to identify strategies and measures to meet the reduction target
- + Identifying targets and reduction strategies in the General Plan and evaluating the environmental impacts of the CAP in the General Plan EIR
- + Monitoring effectiveness of reduction measures and adapting the plan to changing conditions
- + Adopting the CAP in a public process following environmental review

This approach allows jurisdictions to analyze and mitigate the significant effects of GHGs at a programmatic level, by adopting a plan for the reduction of GHG emissions. Later, as individual projects are proposed, project-specific environmental documents may tier from and/or incorporate by reference that existing programmatic review in their cumulative impacts analysis. Project-specific environmental documents prepared for projects consistent with the General Plan and CAP may rely on the programmatic analysis of GHGs contained in an EIR that would be certified for the City's future General Plan and CAP. Chapter 5 provides a discussion of the criteria and process the City will use to determine if a future project is consistent with the CAP.

A project-specific environmental document that relies on this CAP for its cumulative impacts analysis must identify specific CAP measures applicable to the project, and how the project incorporates the measures. If the measures are not otherwise binding and enforceable, they must be incorporated as mitigation measures applicable to the project. If substantial evidence indicates that the GHG emissions of a proposed project may be cumulatively considerable, notwithstanding the project's compliance with specific measures in this CAP, an EIR must be prepared for the project.

## **Chapter 2-Community Context**

This Climate Action Plan has been developed within the context of Lodi's distinct local characteristics. The climate, building stock, demographics, and local economy establish the capacity for emissions reductions opportunities in Lodi. Thus the measures in this CAP were designed to be context specific with implementation strategies based on targeted outreach to engage all demographic groups. This chapter provides an overview of the community characteristics that factored into the measure development process identifies potential barriers to participation of residents and provides a discussion of how actions in this CAP are designed to reduce these barriers, enabling successful implementation.

## Climate Zone

Lodi is located in California's agriculturally-rich Central Valley, bounded by the Sacramento-San Joaquin River Delta to the west and the San Joaquin Valley to the east. Lodi is a compact city with situated just south of the Mokelumne River in on a gridded street network surrounded by agricultural lands. Industrial uses are primarily concentrated in the eastern side of the City, defined by the rail road line and Highway 99. Large commercial uses are concentrated along the highway and other major corridors, such as Kettleman Lane to the south. The newly revitalized downtown area is in the very core of the City, located among historic neighborhoods and smaller retail stores. The remainder of the urban area is primarily dedicated to residential developments.

Lodi's climate has a direct relationship to energy use in homes and businesses. Lodi typically experiences cool, rainy winters and hot, dry summers. While inland California experiences greater temperature swings than the temperate coastal areas, Lodi's proximity to the Delta and the San Francisco Bay results in more moderate temperatures than other cities in the valley.

Strategies to increasing energy efficiency in the built environment are central to reducing energy consumption associated with heating and cooling systems during the hot summer and cold winter. One such measure acts to encourage the replacement of conventional roofs with cool roofs, which use reflective materials to deflect the heat of the sun, in turn reducing interior building temperatures and demands on the HVAC system.

Other measures which help to mitigate summer heat include planting large deciduous street trees and planting residential shade trees to protect the southern and western walls of a home from the sun, reducing heat absorption and cooling costs. Building integrated vegetation can also lower energy use as green roofs and green walls act to decrease interior building temperatures by absorbing the sun's energy before it reaches the building envelope.

Each of these measures will reduce greenhouse gas emissions and utility costs for service users. Due to Lodi's unique climate and geography, certain measures will be more successful at reducing emissions than others, but all measures will ultimately improve the quality of life for Lodi's community members.

## Building Inventory

The majority of Lodi's housing stock, 68%, consists of single-family homes while 20% consists of multi-family developments. Of the total housing stock, 66% was built prior to 1980, which marked the implementation of Title 24, California's Green Building Code. Homes of this vintage are excellent candidates for building energy retrofits and weatherization as they often suffer from inefficiencies due to outdated heating and cooling systems, poor insulation, single pane windows, cracks in the building foundation and other gaps in the building envelope.

**Table 2.1 Tenure by Units in Structure**

Housing Type	2000		2011		% Change
	Number	Percent	Number	Percent

Source: ACS Three-Year Estimate, 2011.

Energy efficiency retrofits can achieve significant greenhouse gas reductions for Lodi as building energy is responsible for over 50% of the communitywide greenhouse gas emissions. Several measures in this CAP are aimed at achieving reductions through promoting retrofit assistance programs, which are available to both single family and multi-family property owners and residents.

As of 2008 there was over 6 million square feet of non-residential space in Lodi, composed of primarily industrial food processing facilities. Opportunities for commercial retrofit financing could be expanded to gain additional reductions through energy efficiency improvements.

### Renter Occupied Housing

While 50% of Lodi's building stock is composed of single-family detached homes that are owner occupied, as shown in Table 2.1, another 20% are single family homes that are renter occupied and renters occupy a majority of the multi-family housing. Furthermore, Table 2.2 indicates that renters occupy half of the housing stock that was built before the enactment of Title 24 in 1980. In general, renters are less likely to pursue opportunities for energy efficiency improvements, even though they may qualify for free weatherization programs that improve the comfort of their home while reducing utility bills.

*“Renters are less likely to pursue opportunities for energy efficiency improvements; even though they may qualify for free weatherization programs that improve the comfort of their home while reducing utility bills.”*

## Demographics

The majority of the measures in this CAP are voluntary and written to promote participation of Lodi’s residents and businesses. As outreach to and participation of all members of the community is a primary objective of this plan, some of the measures are designed to emphasize the engagement of groups in Lodi that might have difficulty accessing the information and resources in this CAP. The measures are designed to help the City work towards reducing barriers to participation for marginalized groups in order to ensure implementation of the CAP. The following population groups are possible candidates for targeted outreach efforts.

### Low Income Households

Table 2.3, above, describes the household income characteristics of Lodi residents. Approximately 41% of the households in Lodi are considered low income, very-low income or extremely low income. The high cost of whole-house energy efficiency improvements prevents many low-income residents from investing in retrofits, even though they would save money in the long run on their utility bills. The Federal Weatherization Assistance Program uses local service providers to install cost-effective energy efficiency improvements, such as high efficiency light bulbs, new windows and new insulation, in low income households to reduce utility bills and improve overall comfort and safety. Barriers to energy efficiency for low income residents include a lack of program awareness, as well as informational and technical barriers.

Some measures in this CAP promote the use of alternative transportation by improving bicycle and pedestrian connectivity and increasing service of the City’s bus system. Since low income residents are more likely to rely on an alternative means of transportation, enhancing local and regional transit connectivity

would not only reduce GHG emissions associated with single-occupancy vehicle trips, but also provide these residents with greater access to job centers.

### Senior Households

While the majority of Lodi’s residents are middle-aged adults, many are nearing the age of retirement, represented by a 50% increase in population between the ages of 55 to 59 by 2011, and a 53% increase in residents between 60 to 64 years of age. Seniors citizens may have difficulty applying for retrofit programs, but could see significant utility bill savings, especially if they live in older homes.

Targeted outreach efforts can engage seniors with technical assistance, information on available rebates and financial assistance to encourage their participation in energy efficiency retrofit programs. Many seniors live older homes and could reduce their energy cost with energy efficiency improvements. For various reasons, seniors may face challenges in participating in such programs, such as lack of knowledge about energy efficiency programs, reluctance to incur debt (even zero interest rate deferred loans), and the need for help applying for assistance and working with contractors.

**Table 2.4-Age Characteristics and Trends**

Age	2000		2011		% Change
	Number	Percent	Number	Percent

Lodi’s General Plan has several policies to encourage mixed-use and transit-oriented developments as the City grows to accommodate future populations. Higher density developments near downtown and other commercial areas create dynamic and walkable communities that have become increasingly appealing to the elderly who may be looking to drive less while downsizing from their larger detached single family homes.

### Non Native English Speakers

While Lodi’s population has grown at 10% in the last few years, the demographic makeup of the community has also changed. Spanish speaking immigrants compose the majority of the non-native English speakers in Lodi and have grown as a group by 42% between 2000 and 2007.

This CAP emphasizes the importance of reaching out to and engaging all demographic groups in the community who may have difficulty accessing the resources in this CAP due to communication, information and technical barriers. Community and social events provide an excellent channel for engaging various ethnic groups. Without their involvement, the CAP will not reach its mandated emissions reductions projections.

<b>Table 2.5-Ethnicity Characteristics and Trends</b>

## Local Economy

Employment opportunities in Lodi are primarily centered on agricultural operations and industrial manufacturing companies. Other employers include the hospital, school district and local retailers. Employment opportunities in Lodi have grown in the last few years, due in part to the development of the Reynolds Ranch property on the southeast end of town which is now occupied by three large commercial retail employers.

Agricultural and food processing facilities in Lodi could contribute hugely to GHG reductions through diverting organic waste from landfills, which releases methane as it decomposes. Industrial manufacturing companies should be encouraged to undergo energy audits and upgrade to more advanced technologies to increase efficiency across their production system. In addition, these companies could develop transportation demand management programs to promote carpooling among employees and provide increased services for employees that may use alternative transit to reach work.

Lodi’s proximity to two major freeways provides access to various job centers, but a lack of regional transit connectivity requires many residents to use personal cars for their daily commutes. Over half of the residents in Lodi, or 57%, commute daily for job purposes, which is slightly less than the County average of 59% commute trips. As a result, a large portion of emissions can be attributed to single-occupancy vehicle trips, which can only be reduced by enhanced fuel efficiency or the use of alternative transportation for commuters. While the downtown transit center provides some regional connectivity through Amtrak, further reducing emissions attributed to commuting will require additional alternative transportation options to further connect Lodi residents to regional employment centers.

**Table 2.6—Employed Residents and Commuting**

### Chapter 3-Green House Gas Inventory

The City of Lodi has prepared this CAP to identify long-term strategies to mitigate its contribution of greenhouse gas (GHG) emissions. This chapter identifies trends in community wide GHG emissions to establish a baseline emissions level in the year 2008. Baseline emissions are determined using activity data collected from energy, water and waste collection service providers, as well as information collected as part of the General Plan process. Future emissions levels are then projected for the years 2020 and 2030, based on estimated future. This chapter also establishes a GHG emissions reduction target and explains how local, state and federal actions will contribute to the

## 2008 Baseline Inventory

The purpose of the 2008 baseline inventory is to identify current emission sources, relative source contributions, and to understand the overall nature and magnitude of communitywide GHG emissions. The inventory is then used to assist policy makers in effectively implementing cost-effective GHG-reduction policies, actions and measures. An accurate inventory is necessary to understand which sectors contribute the largest portion of emissions, have the greatest reduction potential and can be most effectively influenced by policies and actions implemented by the City. This inventory contains both a community and municipal inventory which contribute to the total emissions.

The International Panel on Climate Change (IPCC) identifies six primary GHG compounds, including carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), and nitrous oxide (N<sub>2</sub>O) as the predominant GHGs found in non-industrial processes. Since each type of GHG has a different capacity for trapping heat, all emissions are presented in units of metric tons of carbon dioxide equivalent per year (MT CO<sub>2</sub>e/yr), which allows all emissions to be normalized to a single unit of measure.

## Community Inventory

### 2008 Baseline Emissions

The city of Lodi's baseline inventory is ordered by sector. A "sector" is an individual subset of the total greenhouse emission spectrum, composed of emissions relating to an economy, industry, market, or general society. The sectors that were measured in this CAP are: energy, transportation, solid waste, waste water, and water consumption. Each of these sectors is shown separately in the overall emissions spectrum to allow for specific measure development for emissions reductions.

#### Energy

The energy sector consists of electricity and natural gas consumption. Energy use typically represents a large portion of total greenhouse gas emissions and is divided into residential and non-residential uses. The City obtained historical (2008) electricity consumption data from Lodi Electric Utility (LEU) and natural gas consumption data from Pacific Gas and Electric (PG&E). LEU and PG&E provided communitywide data aggregated by land use (i.e., residential and non-residential). Electricity data for kWh used from 2008-2009 was converted into CO<sub>2</sub>e using an LEU-specific emission factor. Natural gas data for therms was converted into CO<sub>2</sub>e using a PG&E-specific natural gas emission factor.

**Table 3.1 Baseline Emissions 2008**

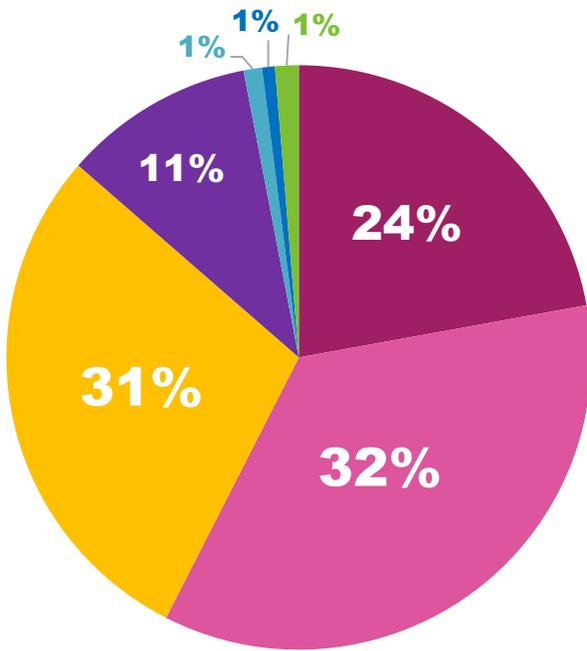

Emissions Sector	MT CO <sub>2</sub> e	% of total
<b>Energy Consumption</b>	<b>268,102</b>	<b>55.1%</b>
<i>Residential Electricity</i>	61,295	12.6%
<i>Residential Natural Gas</i>	118,486	24.3%
<i>Non-Residential Electricity</i>	52,548	10.8%
<i>Non-Residential Natural Gas</i>	35,773	7.4%
<b>Transportation</b>	<b>148,624</b>	<b>30.5%</b>
<i>On-Road Vehicles</i>	141,124	29.0%
<i>Off-Road Vehicles and Equipment</i>	7,500	1.5%
<b>Solid Waste</b>	<b>54,305</b>	<b>11.2%</b>
<b>Water Consumption</b>	<b>5,231</b>	<b>1.1%</b>
<b>Wastewater Treatment</b>	<b>3,649</b>	<b>0.7%</b>
<b>Municipal</b>	<b>6,717</b>	<b>1.4%</b>
<b>Total</b>	<b>486,628</b>	<b>100.0%</b>

#### Transportation

The transportation sector provides an estimate of emissions generated from vehicle miles traveled (VMT) by passenger cars and freight trucks. The inventory accounts for two types of trips; any vehicle trips generated by Lodi land uses that stay within the city limits and half of all vehicle trips generated by Lodi land uses that either begin or end outside of Lodi. The inventory does not account for pass-through trips. Based on these trips, annual vehicle miles traveled (VMT) is estimated using existing daily traffic volumes determined during the 2008 General Plan update process, and average trip length assumptions generated from U.S. Census data. Annual VMT is translated into emissions using a transportation-specific emissions factor, which was developed using national data for vehicle fleet mix, fuel economy and average fuel combustion. The transportation sector also accounts for emissions from off-road vehicles.

#### Solid Waste

Solid waste emissions are generated from decomposing organic waste in place and methane management activities. Solid waste generated within the City, as a result of community and municipal activities, is collected by Waste Management and deposited at various landfills throughout the region. Annual tons of waste generated and typical waste composition data was obtained from Cal Recycle to determine the total emissions.

RESIDENTIAL ENERGY  
 NON-RESIDENTIAL ENERGY  
 TRANSPORTATION  
 SOLID WASTE  
 WATER  
 WASTEWATER  
 MUNICIPAL

TOTAL MTCO<sub>2</sub>e

486,628

Figure 3.1: Communitywide Emissions by Sector

### Wastewater Treatment

Wastewater treatment plants generate as a byproduct of the processes used to break down organic materials in the untreated water. The City provided activity data describing the volume of wastewater treated annually by the White Slough Sewer District. The inventory includes both direct emissions, resulting from the wastewater treatment processes, and indirect emissions, resulting from electricity used to power the wastewater treatment plant. Direct emissions were calculated using the volume of wastewater treated annually. Indirect emissions were determined using state averages for energy intensities in kWh/MG for wastewater collection and treatment. An LEU specific emissions factor was used to convert electricity intensity data to CO<sub>2</sub>e.

### Water Consumption

Unlike the wastewater sector, emissions from the water sector come from the electricity used to treat, convey, and distribute potable water. Total electricity consumption associated with both municipal operations and communitywide land uses was obtained from the City. Emissions were determined using the LEU-specific emissions factor.

### Municipal Operations

Emissions from municipal operations are included as a sector in the communitywide total. A separate municipal inventory was conducted and is further described in the next section of this chapter.

### Community Inventory Results

The community baseline inventory is composed of the five previously described emissions sectors. The majority of Lodi's communitywide emissions originated from energy (55.1%) and transportation (30.5%), which collectively accounted for approximately 85.6% of the total emissions inventory. Solid waste accounted for 11.2% of communitywide emissions. Wastewater treatment and water consumption combined made up less than 1.8% of emissions. Municipal emissions collectively amounted to 1.4% of the total communitywide emissions.

Table 3.1 provides a summary of the communitywide inventory, presenting subsectors within energy and transportation that were calculated separately during the inventory process. On-road vehicle use is the largest contributor of any subsector, at 29.0% of total community-wide emissions. The next largest contributor is non-residential electricity use at 24.3%, followed by residential electricity (12.6%), and residential natural gas (10.8%).

# Municipal Inventory

## 2008 Baseline Emissions

The baseline municipal emissions inventory follows Local Government Operations Protocols (LGOP) guidance which uses different emissions sources, including; buildings and facilities, the municipal vehicle fleet, wastewater treatment facilities, employee commutes, power generation facilities, public lighting, solid waste, the municipal transit fleet, and water delivery. While municipal operations are a small portion of the communitywide emissions, the City has the power to directly affect its own emissions, thereby setting a good example for programs and policies in the private sector.

### Buildings and Facilities

Emissions from the City’s buildings and facilities result from the consumption of electricity, natural gas and other fuels. Emissions associated with municipal building and facility operations were quantified using data obtained from PG&E and Lodi Electricity Utility (LEU).

### Mobile Fleet

The City’s vehicle fleet emissions were quantified using fuel consumption data for gasoline, diesel and compressed natural gas (CNG), to operate fire response vehicles, landscape maintenance vehicles, passenger cars, light trucks, and sport utility vehicles (SUVs).

### Wastewater Treatment

Wastewater treatment facilities generate methane and nitrous oxide, as a byproduct of the treatment process, as well as emissions from electricity and on-site natural gas consumption. Data relating to electricity consumption was obtained from PG&E. Data relating to backup generators and fuel consumption was obtained from Public Works.

### Employee Commute

The municipal inventory also includes emissions resulting from employee commute trips, which are predominantly fueled by gasoline, with only a few vehicles using diesel.

### Power Generation

Emissions from power generation facilities result from the combustion of natural gas and coal to generate electricity, as well as the transmission and distribution of purchased electricity.

Table 3.2 Municipal Emissions 2008		
Emissions Sector	MT CO <sub>2</sub> e	%
<b>Buildings and Facilities</b>	<b>1,941</b>	<b>29%</b>
<i>Electricity</i>	103	2%
<i>Natural Gas</i>	1,838	27%
<b>Mobile Fleet</b>	<b>1,612</b>	<b>24%</b>
<i>Gasoline</i>	1,173	17%
<i>Diesel</i>	354	5%
<i>Refrigerants</i>	84	1%
<i>CNG</i>	2	0%
<b>Wastewater Treatment</b>	<b>1,519</b>	<b>23%</b>
<b>Employee Commute</b>	<b>739</b>	<b>11%</b>
<b>Power Generation</b>	<b>653</b>	<b>10%</b>
<b>Streetlights</b>	<b>145</b>	<b>2%</b>
<b>Solid Waste</b>	<b>55</b>	<b>1%</b>
<b>Transit Fleet</b>	<b>50</b>	<b>1%</b>
<b>Water Delivery</b>	<b>3</b>	<b>0%</b>
<i>Stormwater Management</i>	2	0%
<i>Water Delivery Pumps</i>	1	0%
<b>Total</b>	<b>6,717</b>	<b>100%*</b>

\*Individual percentages may not add to 100 due to rounding.

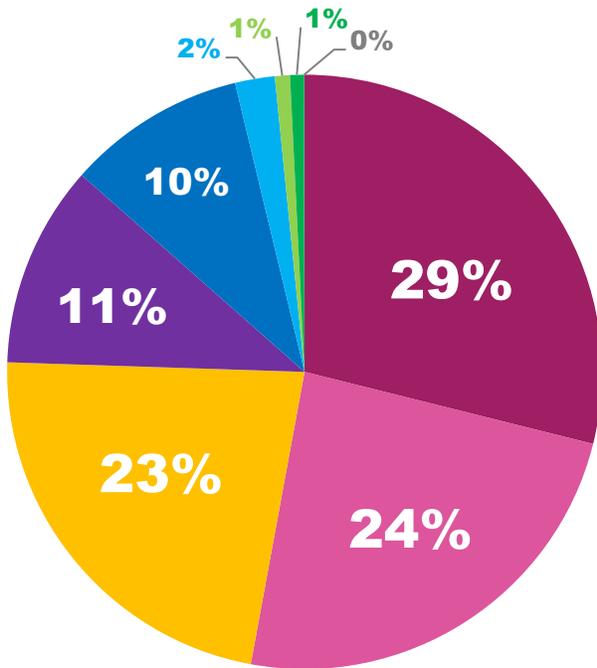

The City operates its own utility which procures electricity through the Northern California Power Agency (NCPA); therefore, only emissions related to transmission and distribution lines are included in the City’s inventory.

### Streetlights

The City of Lodi also consumes electricity to operate public lighting infrastructure, including traffic signals and streetlights. Data from local utility providers was used to calculate emissions from the City’s streetlights.

### Solid Waste

Emissions from municipal solid waste are an estimate of methane generation that will result from the anaerobic decomposition of organic waste sent to landfill, including paper and food waste from offices and facilities, construction waste from public works, and plant debris from the parks departments.

- BUILDINGS AND FACILITES
- MOBILE FLEET
- WASTEWATER TREATMENT
- EMPLOYEE COMMUTE
- POWER GENERATION
- STREETLIGHTS
- SOLID WASTE
- TRANSIT FLEET
- WATER DELIVERY

TOTAL MTCO<sub>2</sub>e

6,717

Figure 3.2: Municipal Emissions by Sector

### Transit Fleet

Lodi's transit fleet includes buses and shuttles that run on compressed natural gas (CNG), an alternative fuel that produces significantly lower emissions than gasoline.

### Water Delivery

The distribution of potable water for drinking and irrigation purposes generates emissions through electricity and natural gas consumption. Lodi relies entirely on groundwater to supply its potable water needs and must use electricity to power pumps which bring the water from underground aquifers to the surface. Data relating to electricity and fuel consumption were obtained from PG&E.

## Municipal Inventory Results

The municipal baseline inventory accounts for emissions from nine separate sources. Similar to the community inventory, the majority of municipal emissions originated from energy use by buildings and facilities (29%) and the City's mobile fleet (24%). Wastewater treatment accounted for 22% of communitywide emissions, city employee commute accounted for 11% and power generation facilities, another 10%. The four remaining emissions sources amounted to less than 5% and include streetlights, solid waste, the City's transit fleet and water delivery.

Table 3.2 provides a summary of the emissions sources for the municipal inventory. Of the largest emissions source, buildings and facilities, natural gas consumption comprised a strong majority at 27% of the total emissions. As for the mobile fleet, a majority of the emissions were the result of vehicles powered by gasoline.

## Emissions Forecasts

### Community Emissions

The baseline inventory was used to project the communitywide GHG emissions to the horizon years 2020 and 2030 under a business-as-usual scenario. Emission projections estimate future emissions levels and provide insight regarding the scale of reductions necessary to achieve an emissions target. GHG reduction measures developed for the CAP are applied to the 2020 and 2030 emissions levels to determine if the City will achieve its GHG reduction targets. Business-as-usual projections coincide with the statewide greenhouse gas reduction target for the year 2020, set by AB 32, as well as the City's General Plan horizon year 2030. As the CAP is a supporting document for the General Plan, estimating emissions to 2030 will allow for "integral implementation" of the CAP alongside the General Plan.

The business-as-usual scenarios assume that historical and current GHG-generating practices and trends for energy consumption, transportation, solid waste, wastewater, and water consumption will continue through 2030. The business-as-usual projections do not include locally-realized GHG reductions from implementation of statewide GHG reduction programs or the local CAP measures described in Chapter 4.

Emissions projections are based on the estimated increase in service population. Service population measures the number of jobs and population as an indicator of current and potential resource consumption in a community. Estimates used to project emissions for this plan are consistent with estimates determined during the General Plan update process, which assume service population will increase by 39.7% from 2008 to 2020 and 75.2% from 2008 to 2030.

The business-as-usual projections use service population growth assumptions across all sectors in this CAP as an indicator of potential growth in Lodi. The projections have been developed for planning purposes, and due to the complexity of each emissions sector, are subject to change. As 2020 approaches, the City will reevaluate its emissions projections and reduction target to incorporate progress toward long-term GHG reductions, and will repeat this process as 2030 approaches as well.

### Municipal Emissions

The growth of City government is related to the population growth within its jurisdiction; however, City government is unlikely to grow at the same rate. Rather, City operations increase in response to demand for resident services, but tend to avoid over-expansion.

***"Service population is expected to increase by 39.7% from 2008 to 2020 and 75.2% from 2008 to 2030."***

Therefore, growth in the City's municipal operations was projected to occur at a more conservative rate of 65% of the population growth from year 2008 to 2020, and 2020 to 2030. All emissions sectors were projected to increase equally, while in reality, changes in the City's priorities and implementation of the CAP will shift the emission ratios and total mass emissions. In the future, updates to the City's municipal emissions inventory should be evaluated considering the economic state of the City during the baseline year to better understand the connections between other factors.

### Communitywide Business-As-Usual Emissions Forecasts

Table 3.3 provides a summary of Lodi's 2020 communitywide business-as-usual projected emissions, which are anticipated to be 671,896 MT CO<sub>2</sub>e in 2020 and 843,367 MT CO<sub>2</sub>e in 2030. Under this scenario, GHG emissions would increase across all sectors from 2008 to 2020 and 2020 to 2030. Municipal emissions, included in Table 3.3, are incorporated into the communitywide total. By 2020 business-as-usual municipal emissions are anticipated to be 8,075 MT CO<sub>2</sub>e, while emissions in 2030 are anticipated to reach 9,207 MT CO<sub>2</sub>e.

Emissions Sector	BASELINE 2008		BUSINESS-AS-USUAL 2020		BUSINESS-AS-USUAL 2030

Pavley II	3,284	3,488
Renewable Portfolio Standard	31,424	38,733
SB 7x Water Reduction	1,271	1,523
% Business-As-Usual	14.9%	19.1%
<b>Total Reduction</b>	<b>99,875</b>	<b>161,227</b>

## Adjusted Business-As-Usual Emissions Forecasts

Table 3.4 describes the emission reductions anticipated to occur within the community through implementation of State and federal policies and regulations. The largest reductions are from State and federal fuel efficiency improvements to passenger vehicles and light-duty trucks. As residents and businesses replace older vehicles with newer ones, people will consume less fuel and generate fewer emissions per vehicle mile traveled. California’s low carbon fuel standard will also reduce transportation-related emissions in the community by requiring a transition away from fossil fuels (i.e., gasoline and diesel) toward lower-carbon bio-fuels (e.g., ethanol). Implementation of the regional SB 375 Sustainable Communities Strategy will reduce vehicle emissions through development of effective transit and other alternative transportation systems and encouragement of low-carbon development.

California law also requires all utilities to obtain 33% of their electricity from renewable energy sources by 2020. This increase in renewable electricity will reduce the community energy-related emissions. The medium- and heavy-duty vehicle efficiency improvements program and California Energy Code (Title-24) requirements for new construction will create smaller, but still important, communitywide emission reductions.

State and federal actions that reduce communitywide emissions within the City of Lodi will make it easier for the community to achieve 2020 and 2030 emission reduction goals. As shown in Figure 3.3 with implementation of State and federal actions, communitywide emissions would be 580,094 MT CO<sub>2</sub>e/yr in 2020 and 691,348 MT CO<sub>2</sub>e/year in 2030.

## Emissions Efficiency Target

The City of Lodi has chosen to utilize an efficiency based emissions target with the CAP. The logic behind the efficiency targets is that if all California communities achieved this level of efficiency on a “fair-share” per service population basis, then the State would achieve its AB 32’s 2020 GHG reduction goals. The

target metric is calculated by dividing total land use related statewide emissions by the sum total of population and jobs projected in the State in the horizon. As shown in Figure 3.5, this CAP establishes a target of improving communitywide per service population emissions efficiency to 4.5 MT CO<sub>2</sub>e/ service population/ year by 2020 and to 3.0 MT CO<sub>2</sub>e/ service population/ year. These goals demonstrate the City’s commitment to make a fair-share contribution to state climate protection efforts and demonstrate a trajectory towards an emissions level in-line with the Executive Order S-3-05 goals.

The General Plan planning horizon extends only to 2030, which makes projecting 2050 activity and emission levels highly uncertain. As a result, this CAP does not address the steps needed to achieve reduction goals beyond 2030. However the City will regularly reevaluate its long-term emissions reduction goals to respond to future circumstances.

## Community Actions

The greenhouse gas reduction strategy presented in the next chapter of this CAP will serve as a framework for achieving the City’s reduction target through local actions. Each greenhouse gas reduction measure includes action steps, which serve to guide the implementation process and insure the City achieves the estimated reductions in the future. The estimated reductions were quantified based on participation rates that reflect on historic trends and future expectations. The 16 quantified greenhouse gas reduction measures would result in communitywide emissions reductions of 44,481 MT CO<sub>2</sub>e/year and an efficiency level of 4.3 MT CO<sub>2</sub>e/ service population/ year.

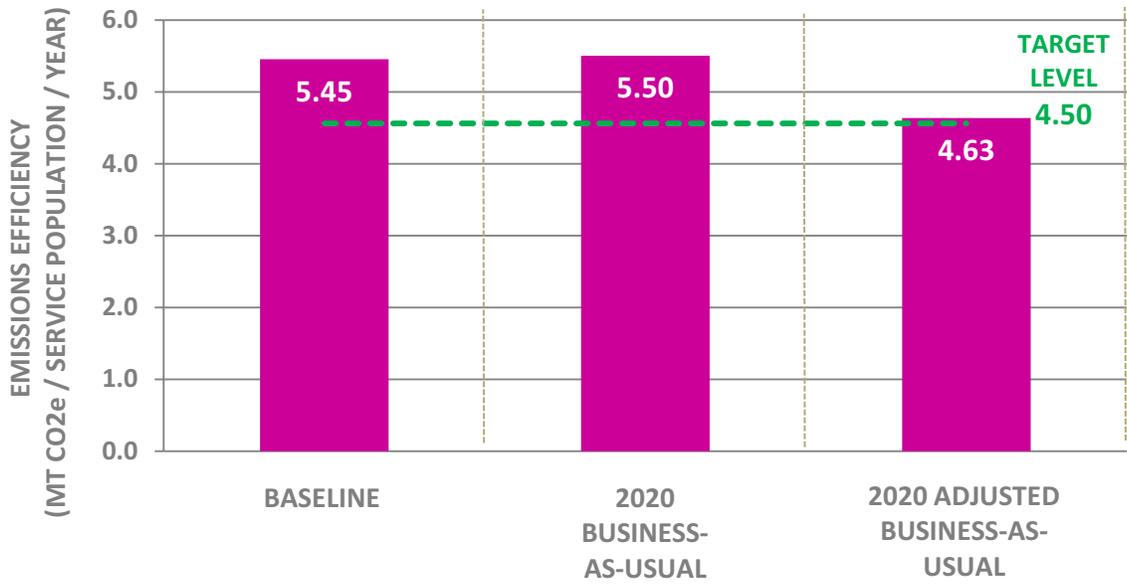

Figure 3.4: Community Emission Efficiency Levels and 2020 Target

## **Chapter 4-Greenhouse Gas Reduction Strategy**

This chapter defines the local strategies that will be implemented by the city in order to achieve its goal of reducing 2008 greenhouse gas emissions 15% by 2020 and 37% by 2030. The measures included in this chapter affect issues within the city's direct influence and are designed to fill the gap between the city's reduction targets and the estimated statewide reductions described in Chapter 3. Measures were developed by (a) evaluating existing community conditions; (b) identifying emission reduction opportunities within the community; and (c) reviewing best practices from other jurisdictions and organizations.

## Leverage Local and Regional Opportunities

Measures in this CAP were designed to foster existing local initiatives and implement policies and programs in the 2010 General Plan while leveraging regional partnerships. Existing city programs were identified and opportunities for program expansion were considered. The greenhouse gas reduction potential of existing programs contributes to the total reductions, while action steps to expand these programs contribute additional reductions to help meet the city’s target. Where there were no existing programs offered by the city, local and regional initiatives were identified as a platform for cross-promotion or new program development.

## Measure Structure

Measures are organized by strategy areas (e.g., energy, transportation), and while most measure are designed to achieve quantifiable GHG reductions, the direct emissions reduction benefits of some measures cannot be accurately quantified. The measures that are not quantified have been identified in this CAP as supporting measures.

Each measure includes: a description providing policy background; action steps to guide implementation; a relative cost analysis; city departments and government agencies with primary responsibility; a description of qualitative and quantitative co-benefits; and an indication of the measure’s GHG reduction potential relative to other measures within the strategy area.

## Strategy Areas

Measures are grouped into five strategy areas that represent the primary ways to reduce communitywide GHG emissions in Lodi. Strategy areas are as follows:

- **Energy Efficiency** recommends ways to increase energy efficiency in existing buildings and systems; and increase the use of renewable energy.
- **Transportation** encourages alternatives to driving alone by car; promotes transit as a viable transportation mode; and greater travel efficiency.
- **Solid Waste** increases organic waste diversion to decrease methane emissions.
- **Water** recommends actions to support state mandated goals to reduce water consumption and the energy required to collect, store, distribute, and treat water and wastewater.
- **Green Infrastructure** uses urban vegetation to off-set the urban heat island effect, thereby reducing building energy use.

## Measure Description

Each measure begins with a description of how GHG emissions are reduced and provides important background information regarding the city’s rationale and policy direction. Additionally, some descriptions highlight the city’s actions to date and then provide guidance for expanding existing programs.

## Actions and Performance

Action steps are provided in a table following each measure description. Actions identify specific steps that the city will take to implement the measure. Performance metrics are also provided so that the city may track progress towards achieving the reductions described in this CAP.

## Relative Public and Private Cost

The relative cost associated with measure implementation and participation is provided for the city (i.e., public) and residents / businesses (i.e., private). The cost analysis uses assumptions of labor hours and capital costs for code enforcement, program development, planning, and outreach efforts. In instances where the CAP is simply documenting GHG reductions associated with ongoing or planned city programs (e.g., implementation of the Urban Water Management Plan), the public cost estimates only reflect those additional actions recommended in the CAP (e.g., expanded public outreach efforts). Public costs are estimated as total cost to implement through 2020 (as opposed to annual costs), while private costs are estimated as one-time installation or participation costs.

These assumptions were used to assign a cost range to each measure, represented by the symbols shown in Figure 4.1 below. Where implementation does not require the city to increase funding above baseline levels, the measure is considered cost neutral. Supporting information on cost estimates is provided in Appendix C.

ICON	RANGE
0	<b>COST NEUTRAL</b> PUBLIC: \$0.00 PRIVATE: \$0.00
\$	<b>VERY LOW</b> PUBLIC: \$10,000 and below PRIVATE: below \$100
\$\$	<b>LOW</b> PUBLIC: \$10,001 - \$20,000 PRIVATE: \$101 - \$200
\$\$\$	<b>MEDIUM</b> PUBLIC: \$20,001 - \$100,000 PRIVATE: \$201 - \$1,000
\$\$\$\$	<b>HIGH</b> PUBLIC: above \$100,000 PRIVATE: above \$1,000

Figure 4.1: Relative Cost Analysis Range

## Responsible Agencies

Each measure is assigned to a city department, public agency, or non-governmental nonprofit organization that will be responsible for implementing action steps. The following agencies are assigned responsibility for implementing this CAP:

- Lodi Electric Utility Department
- Community Development Department:
  - Planning Division
  - Building Division
  - And Neighborhood Services Division
- Parks, Recreation, and Cultural Services
- Public Works
- San Joaquin County Human Services Agency (HSA)
- Tree Lodi
- Lodi Chamber of Commerce

## Community Co-benefits

Beyond reducing GHG emissions as described in Chapter 2, many recommended CAP actions have the potential to provide additional benefits for the community. These co-benefits represent an improvement in the quality of life in Lodi and contribute to improved environmental quality. Some co-benefits are quantifiable, such as the amount of energy that is saved, while others are qualitative and will be realized to varying degrees.

The co-benefits which are quantifiable are listed below, and use the following metrics:

- Electricity Savings: kilowatt hours per year (kWh/yr)
- Natural Gas Savings: therms/yr
- Waste Reduction: tons/yr
- Vehicle Miles Traveled Reduction: miles/yr

Qualitative benefits, which are not quantified, include:

- Utility Bill Savings
- Improved Air Quality
- Improved Water Quality
- Reduced Stormwater Runoff
- Reduced Heat Island Effect
- Improved Public Health

In the future, methodologies may be developed that allow the value of these co-benefits to be quantified.

## Greenhouse Gas Reductions

Reduction potential values are provided with each measure that identifies the estimated annual GHG emission reductions anticipated in 2020 and 2030 in MT CO<sub>2</sub>e/yr. Each quantified measure also includes a donut chart that describes the percentage of reductions that result from the measure relative to the total reductions for the strategy area.

## Greenhouse Gas Reduction Potential

Table 4.1 summarizes the CAP's GHG reduction potential. The majority (43%) of reductions come from energy efficiency improvements. Transportation strategies provide 37% of reductions. Waste reduction and management strategies make up the remaining 20% of reductions.

\* Lodi Electric Utility

\*\* Methane Capture is included as a reduction, but it is assumed the city will not need to take any action. See the discussion on Solid Waste for more information.

## ENERGY EFFICIENCY

In 2008, the city's consumption of electricity for appliances, lighting and cooling, and combustion of natural gas for heating, cooking, and other processes within residential, commercial, and industrial buildings generated 58% (295,649 MT CO<sub>2</sub>-e) of Lodi's total GHG emissions. Of the total energy consumption in Lodi, residential energy use accounted for 39% (113,843 MT CO<sub>2</sub>-e) whereas non-residential energy use accounted for 61% (181,806 MT CO<sub>2</sub>-e). The CAP's energy efficiency measures are primarily focused on the efficient use of electricity, though some measures will also result in natural gas savings. Measures include retrofits of existing residential and commercial buildings, building system efficiency upgrades, streetlight upgrades, building shade tree planting, and increasing renewable energy use.

The total GHG emission reduction potential of the energy efficiency strategy is 16,386 MT CO<sub>2</sub>e/yr in 2020 and 29,352 MT CO<sub>2</sub>e/yr in 2030.

## E-1.1 LEU ENERGY CONSERVATION PROGRAMS

### Promote existing Lodi Electric Utility energy conservation programs for residential and commercial properties.

About 2/3 of houses in Lodi were built prior to the adoption of California’s Title 24 energy efficiency requirements in 1978, and 79% of the building stock that is projected to exist in Lodi in 2020 has already been constructed. Lodi stands to realize a large portion of its emissions reductions from building retrofits. While energy efficiency retrofits reduce building-related greenhouse gas emissions, residents can also benefit from noticeable savings on their utility bills and improved comfort of their home or business. Since 1998, Lodi Electric Utility (LEU) has spent more than \$8.3 million in Public Benefits Charge funds on energy efficiency programs, resulting in an 18% peak demand reduction and 16% energy reduction. LEU’s energy conservation programs include:

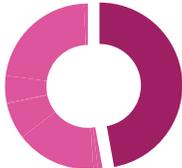

- **Appliance Rebate** for the purchase of an energy efficient refrigerator, clothes washer or dishwasher;
- **Home Improvement Rebate** for replacing insulation, installing attic fans, whole house fans, shade screens or window tinting, radiant barriers or replacing HVAC air conditioning systems;
- **HVAC System Test Rebate** for performing high-end duct system testing to measure air flow, air return and system balance;
- **Commercial/Industrial Rebates** for building envelope improvements and system efficiency upgrades;
- **Commercial Energy Efficiency Financing** up to \$150,000 in financing for energy efficiency improvements, to be repaid on the participant’s monthly utility bill; and
- **Energy Assessments** on-line and on-site for residential and commercial customers.

LEU will continue to implement its energy conservation programs, and increase participation through a comprehensive public outreach campaign. The city will conduct targeted outreach to demographic groups who may be less likely to retrofit their home.

<b>ACTION STEPS</b>	<b>A</b>	Maintain the LEU website with information about current energy efficiency rebates and incentives. Add local energy efficiency improvement success stories. Leverage Energy Upgrade California outreach and educational materials.
	<b>B</b>	Provide training to Building Division counter staff regarding available sources of rebates/incentives and printed pamphlets or FAQ sheets.
	<b>C</b>	Identify demographic groups for targeted outreach efforts; develop promotional materials in several languages for distribution at community events.
	<b>D</b>	Partner with San Joaquin County Human Services Agency to develop a program which provides direct assistance to individuals in identifying programs, applying for rebates and working with contractors.

<b>METRIC</b>	<b>1</b>	<b>2020:</b> Achieve net annual energy savings of 20,989 MWh <b>2030:</b> Achieve net annual energy savings of 39,091 MWh
---------------	----------	--

<b>COST</b>	<b>PUBLIC</b>	\$\$\$	<b>PRIVATE</b>	Varies	<b>RESPONSIBILITY</b>	Lodi Electric Utility Department Community Development Department San Joaquin County Human Services Agency

	<b>2030</b>	<b>39,091,231</b> kWh/yr					

## E-1.2 ENERGY EFFICIENCY FINANCING

### Collaborate with other San Joaquin agencies to create a regional PACE program.

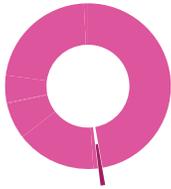

A property-assessed clean energy (PACE) financing program is enabled through AB 811 legislation. This bill allows land-secured loans for homeowners and businesses who install energy efficiency projects and clean-energy generation systems. Senate Bill 555 reinforced implementation opportunities for PACE programs by expanding the scope of activities allowed within a community facilities district, as defined by the Mello-Roos Community Facilities Act of 1982. A PACE program permits property owners within participating districts to finance the installation of energy- and water-efficiency improvements in their home or business through a lien against their property that is repaid through their property tax bill. If the property is sold, payment responsibility transfers to the new owners, allowing building owners to avoid up-front installation costs while at the same time requiring little or no investment of local government general funds. In some instances, the new lender may require repayment of the existing lien, in which case the remaining PACE loan is repaid from the proceeds of the property sale.

The city will partner with other interested San Joaquin County jurisdictions to create a Property Assessed Clean Energy (PACE) financing program for commercial and residential energy efficiency retrofits.

ACTION STEPS	A	Develop a regional PACE program through collaboration with other San Joaquin County cities.
	B	Develop an outreach program describing available PACE financing options. Work with LEU to identify large energy users and focus outreach efforts.

METRIC	1	2020: 4% of existing single-family units install a medium retrofit package (retrofit packages are described in Appendix B) 2030: 6% of existing single-family units install a medium retrofit package
--------	---	--

COST	PUBLIC	\$\$	PRIVATE	Varies	RESPONSIBILITY	Lodi Electric Utility Department

	2030	165,882 kWh/yr 36,963 Therms/yr					

## E-1.3 LOW-INCOME WEATHERIZATION

### Provide weatherization assistance to low-income households.

Weatherization reduces residential energy consumption by sealing gaps in the building envelope, moderating interior temperatures and reducing loads on HVAC systems. There are several co-benefits that come with weatherization, including reduced utility bills and improved occupant comfort. Weatherization is accomplished through various cost-effective home repairs, including; installing insulation, caulking or replacing windows and doors, and repairing inefficient HVAC systems. While most homes can benefit from weatherization, it is especially effective in older homes and can provide some relief to low-income households who may be struggling to pay their utility bills and do not have the means to invest in more intensive energy efficiency repairs.

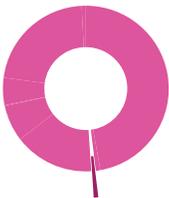

Lodi Electric Utility partnered with California Youth Energy Services in the past to provide weatherization services to a few hundred households in Lodi. Future weatherization initiatives will utilize a third party contractor to deliver weatherization services to low income customers who are enrolled in LEU’s utility bill assistance programs, or fall below certain income restrictions. San Joaquin County Human Services Agency (HSA) also administers weatherization services to low-income residents through the U.S. Department of Energy (DOE) Federal Weatherization Assistance Program (WAP), which they promote to Lodi residents through the HSA Community Service Center and utility bill assistance programs.

The city will identify neighborhoods that would benefit from weatherization and develop a targeted outreach campaign to provide low income homeowners and renters with information about available weatherization assistance programs, accompanied by application assistance.

<b>ACTION STEPS</b>	<b>A</b>	Support LEU in the development of weatherization initiatives for low-income households.
	<b>B</b>	Leverage LEU’s CARE and SHARE utility bill assistance programs for cross-promotion of weatherization programs.
	<b>C</b>	Develop a targeted outreach campaign to demonstrate the benefits of weatherization to low-income households and encourage participation in weatherization assistance programs.
	<b>D</b>	Work with San Joaquin County Human Services Agency to promote the federal weatherization assistance program.

<b>METRIC</b>	<b>1</b>	<b>2020:</b> 4% low-income households receive weatherization assistance <b>2030:</b> 6% low-income households receive weatherization assistance

## E-2.1 ENERGY MANAGEMENT SYSTEMS

### Promote energy management systems to reduce peak load energy demand.

Energy Management Systems (EMS) are computerized systems that reduce commercial and industrial energy use by automating the control of a building’s mechanical, electrical, and ventilation systems. Various energy demand-side management programs throughout the country are leveraging this technology, combined with web-based user interfaces, to attract participation in these kinds of voluntary programs.

The city will develop an outreach campaign to describe how energy management systems work inside a building, including internet-based displays that show how much energy is being used and smart appliances that can defer discretionary electricity use to off-peak hours. LEU will also consider developing peak load reduction incentives for commercial and residential customers.

ACTION STEPS	A	Develop an EMS outreach program and make information available at the Building Division counter.
	B	Identify and advertise available rebates for energy management systems on the city’s Website.
	C	Consider developing a peak load reduction incentive for LEU customers.
	D	Demonstrate energy efficiency savings and co-benefits through a municipal EMS pilot project.

METRIC	1	2020: 10% of existing non-residential floor area install energy management systems and compatible technologies 2030: 25% of existing non-residential floor area install energy management systems and compatible technologies

	2030	11,131,442 kWh/yr				1,339 MT CO <sub>2</sub> e/yr 4,437 MT CO <sub>2</sub> e /yr	

## E-2.2 COMMERCIAL BUILDING COMMISSIONING

### Improve energy efficiency in new and renovated buildings through continuous commissioning.

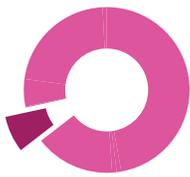

Building commissioning is the process of achieving, verifying, and documenting the performance of a building’s facilities and systems to meet defined objectives and criteria. In a study conducted by the Lawrence Berkeley National Laboratory, commissioning resulted in whole-building energy savings averaging 18% with a corresponding payback time of 0.7 years. Building commissioning is typically applied to new construction during the planning/design and construction phases to ensure the building’s systems (e.g., heating, ventilation, and air conditioning) are performing at optimum efficiency. Retro-commissioning addresses systems in existing buildings that are undergoing renovation or installing upgraded equipment. Buildings should be re-commissioned every five years to maintain optimal system efficiency.

LEU will consider developing a commercial building commissioning program that will provide information and incentives to commercial customers for commissioning new or renovated buildings and facilities.

<b>ACTION STEPS</b>	<b>A</b>	Provide outreach to commercial building owners to promote the energy savings and other benefits of commissioning and retro-commissioning.
	<b>B</b>	Create a building commissioning program through LEU.
	<b>C</b>	Develop a municipal commissioning program to commission all buildings and facilities, with re-commissioning occurring every five years.

<b>METRIC</b>	<b>1</b>	<b>2020:</b> 25% of existing non-residential buildings undergo commissioning through 2020 <b>2030:</b> 25% of existing non-residential buildings undergo commissioning through 2030
	<b>2</b>	<b>2020:</b> 25% of new non-residential buildings undergo commissioning through 2020 <b>2030:</b> 25% of new non-residential buildings undergo commissioning through 2030

<b>CO-BENEFITS</b>	<b>2020</b>	<b>2,733</b> MWh/yr <b>136,678</b> Therms/yr	<b>QUALITATIVE</b>	Improved Air Quality Improved Public Health Utility Bill Savings	<b>GHG REDUCTIONS</b>	Reductions by 2020: <b>1,698</b> MT CO <sub>2</sub> e/yr Reductions by 2030: <b>2,094</b> MT CO <sub>2</sub> e /yr	Sector Reduction  <b>7%</b>
	<b>2030</b>	<b>635,852</b> MWh/yr <b>31,793</b> Therms/yr					

## E-2.3 BUILDING SHADE TREES

### Plant building shade trees to improve energy efficiency in new and renovated buildings.

When properly placed, large shade trees can reduce energy use by protecting a building from the heat of the sun, in turn reducing demand on the heating and cooling system. A successful shade tree program needs to address various factors, such as tree selection, planting location, and maintenance. Trees with larger canopies and denser foliage provide more shade than other species. Deciduous species are ideal for reducing building cooling costs as they provide shade in summer, but allow winter sunlight into buildings for passive solar gain in cooler weather.

The city will partner with Tree Lodi to develop an outreach program to encourage property owners to plant trees in locations that maximize building shade potential.

ACTION STEPS	A	Partner with Tree Lodi to promote the various benefits of planting building shade trees to property owners.				
	B	Develop a shade tree planting guide to facilitate proper tree selection, siting, and installation.				
METRIC	1	2020: Plant 2,500 shade trees 2030: Plant 4,000 shade trees				
COST	PUBLIC	\$\$\$		PRIVATE	\$	RESPONSIBILITY Lodi Electric Utility Department Tree Lodi

	2030	283,738 kWh/yr				

## E-2.4 STREETLIGHT UPGRADE

### Upgrade existing streetlights with more efficient technology.

High pressure sodium bulbs, commonly used in streetlights, require more energy and have a shorter lifespan than new induction and/or light-emitting diode (LED) lights. The City of Lodi's Public Works Department maintains 6,500 street lights and 52 traffic signals. The city previously upgraded several streetlights around Lodi Avenue as part of the Lodi Avenue Eastside Improvement Project. The city is planning to upgrade all other streetlights, which they estimate will cost \$3 million, and save approximately \$350,000 to \$400,000 per year.

ACTION STEPS	A	Revise the city's street lights standards to include requirements for energy-efficient technology in new and replacement lamps.				
	B	Develop a street light upgrade plan that identifies an implementation phasing schedule.				
COST	PUBLIC	0*	PRIVATE	0	RESPONSIBILITY	Lodi Electric Utility Department Public Works
	2020	4,402,343 kWh/yr	QUALITATIVE	Improved Air Quality		GHG REDUCTIONS
2030	4,402,343 kWh/yr	Improved Public Health		Reductions by 2030: <b>1,568</b> MT CO <sub>2</sub> e /yr		

\* This CAP measure does not recommend any additional expenses related to streetlight upgrades beyond those already under consideration by the city.

## E-3.1 SOLAR PHOTOVOLTAIC SYSTEMS

### Promote solar PV rebates and eliminate regulatory barriers.

Increasing the use of distributed renewable energy systems (e.g., rooftop solar photovoltaic) prevents the combustion of fossil fuels to generate electricity, thereby reducing GHG emissions. Solar photovoltaic systems convert solar radiation into electricity that can directly power buildings, increasing energy independence and subsequently reducing monthly utility bills. Solar PV systems can be scaled to individual residential systems and larger-scale commercial systems. Parking lots also provide excellent opportunities for solar energy generation. Numerous barriers may prevent widespread adoption of solar PV technology, including city regulations, up-front costs, and misinformation or lack of information. Reviewing and revising the city's zoning and building codes can remove regulatory barriers to solar PV installation. While up-front cost can deter some property owners from investing in solar energy, rebates are available through Lodi Electric Utility and homeowners can use solar service providers or acquire financing through participation in a PACE program (see Measure E-1.2) to reduce out-of-pocket expenses.

Lodi Electric Utility has engaged in outreach via the Solar Education program and the Solar Fair with solar service providers. The Lodi Unified School District recently installed a 2 MW solar project. LEU will continue to promote solar installations through outreach efforts, seeking partnerships to engage in commercial and industrial solar projects. The city will further reduce barriers to participation by reviewing (and streamlining where possible) the permitting process.

ACTION STEPS	A	Review and revise all applicable building, zoning, and other codes and ordinances to remove regulatory barriers to the installation of solar PV in residential and nonresidential construction.
	B	Provide priority permitting and reduced permitting fees for building-scale renewable energy projects.
	C	Enhance outreach efforts to increase solar PV installations, leveraging existing solar PV informational materials from Energy Upgrade California, the California Solar Initiative, and LEU.
	D	Identify potential retail, commercial, or industrial partnerships for large solar projects.

METRIC	1	2020: 1% single-family residential units install a 4.5 kW solar PV system 2030: 1% single-family residential units install a 4.5 kW solar PV system
	2	2020: Install 3.0 MW (total) of solar PV on non-residential buildings 2030: Install 6.0 MW (total) of solar PV on non-residential buildings

## E-3.2 SOLAR WATER HEATERS

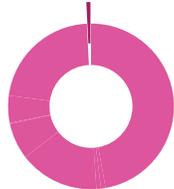

### Promote solar thermal rebates and eliminate regulatory barriers.

Solar hot water heaters harness the sun’s energy to provide hot water, replacing natural gas or electric systems. Solar collectors, usually placed on a roof, absorb the sun’s energy to heat water that is stored in a water tank. According to the California Solar Initiative (CSI), solar hot water systems can lower energy bills by meeting 50% to 80% of hot water needs. The California Solar Water Heating and Efficiency Act of 2007 (AB 1470) created a 10-year program aimed at installing solar water heaters in homes and businesses. AB 1470 was designed to lower the initial costs of purchasing a system, which typically range from \$3,000 to \$6,000. Similar to solar PV installations, available rebates can reduce the upfront costs of solar water heater systems, and participation in a PACE financing program (see Measure E-1.2) can help to amortize the remaining costs. The city will remove regulatory barriers to solar thermal installations and encourage homeowners to install solar thermal systems through outreach.

ACTION STEPS	A	Review and revise all applicable building, zoning, and other codes and ordinances to remove regulatory barriers to the installation of solar hot water systems in residential and nonresidential construction.
	B	Reduce solar hot water heater permitting fees.
	C	Leverage existing California Solar Initiative - Thermal Program information to develop an outreach program to maximize installation of solar hot water systems and promote existing funding opportunities.
	D	Work with local Chamber of Commerce to identify industrial businesses with high water use (e.g., Laundromats), and develop an outreach program to explain financial benefits of converting existing hot water heaters to solar hot water systems.

METRIC	1	2020: 1% single-family residential units install a solar hot water system 2030: 1% single-family residential units install a solar hot water system
	2	2020: 1% multi-family residential units install a solar hot water system 2030: 1% multi-family residential units install a solar hot water system
	2	2020: 3% of non-residential buildings install solar thermal systems 2030: 3% of non-residential buildings install solar thermal systems

COST	PUBLIC	\$\$	PRIVATE	\$\$\$\$	RESPONSIBILITY	Lodi Electric Utility Department
						Community Development Department
						Chamber of Commerce

CO-BENEFITS	2020	35,412 Therms/yr by 2020	QUALITATIVE	Improved Air Quality Improved Public Health Utility Bill Savings	GHG REDUCTIONS	Reductions by 2020: <b>188</b> MT CO <sub>2</sub> e/yr	Sector Reduction  <b>1%</b>
	2030	44,345 Therms/yr by 2030				Reductions by 2030: <b>235</b> MT CO <sub>2</sub> e /yr	

# TRANSPORTATION

Transportation is the second largest sector in Lodi's baseline inventory, producing 29% (148,624 MT CO<sub>2</sub>-e) of Lodi's total GHG emissions (514,175 MT CO<sub>2</sub>-e) in 2008. Emissions in this sector are primarily the result of the combustion of fossil fuels and are determined largely by the number of vehicle miles traveled (VMT) by residents and employees. The best practices for reducing transportation-related greenhouse gas emissions involve reducing the number of vehicle trips through various transportation demand management (TDM) strategies and enhancing the viability of transit and other forms of alternative transportation. In addition, transit-oriented development and mixed-use developments result in denser uses near commercial centers that contribute to decreased vehicle trips. The greenhouse gas reduction strategies presented in this CAP primarily focus on TDM strategies and transit system improvements to reduce greenhouse gas emissions.

The total GHG emission reduction potential of the transportation strategy is 18,967 MT CO<sub>2</sub>e/yr in 2020 and 25,153 MT CO<sub>2</sub>e/yr in 2030.

# T-1.1 TELECOMMUTING AND ALTERNATIVE WORK SCHEDULES

## Advocate for flextime work arrangements to decrease daily commuter trips.

Flextime includes both telecommuting and alternative work schedules and is one of many transportation demand management (TDM) strategies that reduce greenhouse gas emissions by reducing the number of vehicle trips made on a given day. Flextime reduces peak period traffic congestion directly by allowing employees to set their own work schedules, which often involve a condensed four-day work week. The flexibility in hours can also make ridesharing and transit use more feasible. In addition, staggered shifts can reduce peak-period trips and traffic congestion, particularly around large employment centers.

The city will work to increase employee participation in telecommuting and alternative work schedules through targeted outreach to large local employers. Where programs or policies already exist the city will focus its efforts on outreach to employees in order to increase participation rates. For those employers who do not currently offer flextime schedules, the city will encourage the employer to adopt a program or policy and provide promotional support.

ACTION STEPS	A	Target small to moderate increase in employee participation rates in telecommuting and alternative work schedules due to additional promotional efforts by the city.
	B	Encourage employers to adopt a flextime program or policy, if they do not already have one, and provide promotional support upon program kick off.

COST	PUBLIC	\$\$\$	PRIVATE	\$\$\$\$	RESPONSIBILITY	Community Development Department

	2030	792,395 miles/yr by 2030				3,080 MT CO <sub>2</sub> e/yr	
						4,134 MT CO <sub>2</sub> e /yr	16%

## T-1.2 REDUCED MINIMUM PARKING REQUIREMENTS

**Support transit-oriented and mixed use development by reducing parking requirements in new development.**

Research shows that there is an indirect link between reduced minimum parking requirements and a decline in vehicle trips. Reducing parking requirements allows market forces to determine the appropriate level of parking supply based on user demands. As parking lots can be land-intensive, reducing these requirements supports transit-oriented and mixed-use development by maximizing commercial retail space and reducing overall cost to development. Such a policy is especially effective near commercial centers where it is easier for people to take transit, walk, or ride their bikes. In addition, the lower development costs can also support housing affordability.

Reduced parking requirements could be established in locations where parking demand will be lower due to geographic and demographic factors, such as downtown and other commercial and transit centers.

ACTION STEPS	A	Identify areas where new or infill development is likely to occur near commercial and transit centers and determine appropriate number of parking spaces based on market demand.
	B	Phase in tailored reductions in minimum commercial parking requirements.

COST	PUBLIC	\$\$	PRIVATE	0	RESPONSIBILITY	Community Development Department

	2030	587,087 miles/yr by 2030					

## T-1.3 CARSHARING

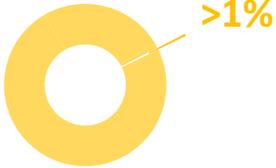

**Support city employees who choose alternative transportation by providing access to cars as needed for work or personal trips.**

Carsharing programs reduce the need for businesses or households to own vehicles, while reducing personal transportation costs and vehicle miles traveled (VMT). Carsharing has sometimes been referred to as the “missing link” in the package of alternatives to the private automobile. For example, vehicles available near a person’s workplace or school can enable them to commute to work via transit or other means, knowing that they’ll have a carshare vehicle available during the day if needed for work or personal trips.

The city will develop a carsharing program for use by city employees. The city will promote the successes of this new program throughout the community, particularly to large employers, to encourage the development of additional programs.

ACTION STEPS	A	Implement a small-scale carsharing program for city employees.
	B	Promote the successes of the program throughout the community encouraging large employers to implement similar programs.

COST	PUBLIC	\$\$	PRIVATE	0	RESPONSIBILITY	Community Development Department (CDD)

	2030	253,354 miles/yr by 2030					

## T-1.4 TRANSIT IMPROVEMENTS

### Expedite the implementation of improvements identified in the Regional Short-Range Transit Plan.

In most cities that have succeeded in growing while limiting vehicle trips, a fundamental component of their success has been improved transit services. In 2009 the city adopted a Short Range Transit Plan which outlines the current level of service and identified improvements that would increase ridership through fiscal year 2017/18. Implementation of the Short Range Transit Plan, however, has been limited by funding in recent years.

The city should advocate for expedited funding to implement the improvements that were identified in the Short Range Transit Plan, increasing system efficiency by focusing on: maintaining the current level of service coverage throughout the city, streamlining existing routes, reducing route redundancy, and extending service to the Reynolds Ranch development upon completion. The city should coordinate new and existing services to serve both general and targeted travel markets and consider potential consolidation of existing private-sector transit operations. To increase ridership the city should provide real-time arrival information, enhance passenger amenities at transit shelters and major transfer centers, update and distribute new route maps and schedules as hard copies and online, and provide information about other transit services to customers across many platforms.

ACTION STEPS	A	Advocate for expedited funding of improvements identified in the adopted Regional Short-Range Transit Plan, with targeted improvements to increase system efficiency, enhance access to new developments, and connect with other regional transit services.
	B	Improve transit ridership experience through integration of GPS-based technologies, clearer transit schedule messaging, and improvements to transit facilities.

	2030	51,950,019 miles/yr by 2030				13,717 MT CO <sub>2</sub> e/yr		

## T-1.5 RIDESHARING

### Encourage and support ridesharing groups and initiatives through additional outreach efforts.

Ridesharing is a transportation demand management strategy that reduces commute trips from single-occupant vehicles through organized carpooling and vanpooling. Ridesharing can attract 5-15% of total commute trips if commuters are encouraged to participate through outreach and information sharing. Providing incentives such as parking cash outs or vanpool subsidies can result in greater participation rates of around 10-30%.

The city can increase participation in employee rideshare programs by working with local employers and/or the Chamber of Commerce to coordinate information sharing, and possibly develop a ridesharing website to help match drivers and riders. The city could also encourage employers to offer parking cash out or subsidies for greater participation rates.

ACTION STEPS	A	Target small to moderate increase in employee participation rates in carpools and vanpools due to additional promotional efforts by the city.			
	B	Encourage employers to offer financial incentives for ridesharing, including parking cash out and carpool subsidies			
COST	PUBLIC	\$\$	PRIVATE	\$\$\$\$	RESPONSIBILITY Community Development Department (CDD)

# SOLID WASTE

Waste disposal creates emissions when organic waste (e.g., food scraps, yard clippings, paper, and wood products) is buried in landfills and anaerobic digestion takes place, emitting methane. In Lodi, 11% of GHG emissions are associated with solid waste generation and disposal in landfills. The CAP's waste diversion measures seek to divert organic waste from landfills by reusing construction materials when possible and increasing communitywide participation in food scrap and yard waste composting.

Construction waste accounts for approximately 29% of the waste stream statewide, and includes items such as lumber, drywall, metals, masonry, carpet, plastics, pipes, rocks, and dirt. Most of these materials are inert and do not contribute to landfill methane generation upon decomposition. However, waste lumber comprises nearly 15% of the total statewide waste stream, and represents a significant source of potential GHG emissions reductions. Per the California 2010 Building Standards Code (Title 24), effective January 1, 2011, all jurisdictions must require the diversion of 50% of construction waste materials generated during certain construction and renovation projects. This CAP assumes the city will enforce these diversion requirements in all applicable future projects.

As shown in Table 4.1, the CAP includes reductions associated with increased methane capture at landfills. The California Air Resources Board approved a new regulation (effective in June 2010) that requires operators of certain landfills to install methane control systems that operate in an optimal manner. Historically, the majority of solid waste generated in Lodi is disposed of at the North County Landfill. While this landfill already has a methane capture system in place, it is less efficient than currently available technology used elsewhere throughout the state. For purposes of this CAP, it is assumed that efficiency improvements will be made to the existing methane capture system at the North County Landfill, but that the city will play no role in implementing these improvements.

The total GHG emission reduction potential of the waste strategy is 9,129 MT CO<sub>2</sub>e/yr in 2020 and 13,260 MT CO<sub>2</sub>e/yr in 2030.

# SW-1.1 ORGANIC WASTE DIVERSION

**Work with Waste Management to divert food waste and compostable paper from landfills and ensure compliance with existing yard waste diversion and construction/demolition waste diversion ordinances.**

Food scraps are unwanted cooking preparation items and leftover table scraps, such as banana peels, apple cores, vegetable trimmings, bones, egg shells, meat, and pizza crusts. Compostable paper, sometimes called food-soiled paper, usually comes from the kitchen and is not appropriate for paper recycling due to contamination. Materials such as stained pizza boxes, uncoated paper cups and plates, used coffee filters, paper food cartons, napkins and paper towels are all compostable paper. Diverting these organic items from the landfill helps to reduce methane gas generation from anaerobic decomposition, and helps to prolong the operable life of a landfill. The city will work with Waste Management to expand its yard waste collection program to accept compostable food and paper products in residents’ existing green waste bins, so these items can also be diverted to composting facilities. The expanded program will allow collection of:

- all food products: fruits, vegetables, breads, cereals, dairy, meat and fish (including bones);
- coffee grounds, filters, and tea bags; and
- food soiled paper: paper towels, plates, napkins, and pizza boxes.

The city will work with Waste Management to develop comprehensive outreach campaigns to inform solid waste customers about the change to the yard waste collection program, identifying what can and cannot be included in the yard waste bins and providing helpful tips to minimize pest and odor problems. The city will also partner with Lodi Unified School District to promote composting education programs in Lodi classrooms.

<b>ACTION STEPS</b>	<b>A</b>	Work with Waste Management to allow residents and local businesses to include food scraps and compostable paper in yard waste collection bins.
	<b>B</b>	Work with Waste Management and Lodi Unified School District to promote organic waste diversion through customer information campaigns.
	<b>C</b>	Ensure compliance with state construction and demolition diversion requirements.

<b>METRIC</b>	<b>1</b>	<b>2020:</b> 50% of residential units participate in food scrap and compostable paper diversion <b>2030:</b> 75% of residential units participate in food scrap and compostable paper diversion
	<b>2</b>	<b>2020:</b> 10% of commercial businesses participate in food scrap diversion <b>2030:</b> 40% of commercial businesses participate in food scrap diversion
	<b>3</b>	<b>2020:</b> 50% of commercial businesses participate in compostable paper diversion <b>2030:</b> 75% of commercial businesses participate in compostable paper diversion
	<b>4</b>	<b>2020:</b> 50% of construction and demolition debris is diverted from landfills <b>2030:</b> 50% of construction and demolition debris is diverted from landfills

	<b>2030</b>	<b>24,004</b> tons/yr					

## SW-2.1 COMPOSTING EDUCATION

### Increase awareness of composting through and outreach and education program.

At-home composting, or turning food scraps into fertilizer, reduces greenhouse gases by reducing the amount of organic waste that is sent to the landfill. Public outreach at the Farmer’s Market indicated that few residents in Lodi were familiar with composting or its benefits. The Lodi Unified School District had a composting program in the past, which was cut due to budgetary constraints. The city could work with the San Joaquin County Master Gardening Class and the Landscape Management Outreach Program (LMOP), which focus on education and stewardship, to develop a composting education program for city and county residents. The program could include a school education program focused on Lodi’s K-6 students to teach composting skills and spread knowledge of the benefits of waste diversion in their own homes. The program could also include an outreach component to provide information to the general public through newspaper articles, newsletters, informational booths at community events, and other volunteer-led outreach activities.

ACTION STEPS	A	Support Waste Management in developing an outreach campaign to encourage residents to include their food scraps and yard waste bins by distributing bill inserts upon roll-out of the food waste program.				
	B	Provide composting information on the city’s website, with a link to resources provided by the County.				
	c	Partner with Lodi Unified School District and the San Joaquin County Master Gardeners to develop a hands-on school composting education program to teach students about the benefits of composting, and how they can do it in their own homes.				
COST	PUBLIC	\$\$	PRIVATE	0	RESPONSIBILITY	Public Works Department (PWD) Waste Management
CO-BENEFITS	QUALITATIVE	Improved Air Quality Improved Public Health			GHG REDUCTIONS	Supporting Measure Not Quantified

# WATER

Water-related GHG emissions are mainly caused by energy used to pump, transport, heat, cool, and treat potable water. Emissions associated with this energy use accounted for approximately 1% of the communitywide GHG inventory. With water supplies expected to continue declining into the future, water conservation strategies have the double benefit of reducing GHG emissions and aligning demand with future water availability. The measures included in this section quantify the greenhouse gas emissions reductions of conservation programs that are already underway in the city.

## W-1.1 WATER CONSERVATION PROGRAMS

### Support conservation through water metering and other UWMP programs.

The city relies entirely on local groundwater for its water resource needs. By conserving water, the city also conserves energy used to pump, treat, and transport water to its customers. The city will meet its obligations under SB 7-X to reduce water consumption 20% by 2020, primarily through implementation of the Water Meter Program which is planned for completion in 2017. The city will also implement water conservation programs described in the Urban Water Management Plan (UWMP) to reach the mandated reduction target.

ACTION STEPS	A	Implement UWMP water conservation programs.			
	B	Promote the city's Sustainable Water Use Guide simultaneously with outreach for the Water Meter Retrofit program.			
COST	PUBLIC	0*	PRIVATE	0	RESPONSIBILITY Public Works Department
	CO-BENEFITS QUALITATIVE	Improved Water Quality Utility Bill Savings			

\* This CAP measure does not recommend any additional expenses related to water conservation programs beyond those already planned as part of the city's Urban Water Management Plan.

# GREEN INFRASTRUCTURE

Green infrastructure refers mainly to the open spaces and vegetation that provide places for recreation, wildlife habitat, and relief from the heat of the sun. The term can also refer to building-integrated vegetation projects, such as green walls and green roofs. There are numerous benefits to planting trees and increasing vegetated surfaces, including reduced surface runoff, increases in natural habitat, reduced urban heat island effect, and opportunities for carbon sequestration. While vegetation-related carbon sequestration is known to reduce greenhouse gases in the atmosphere, the precise level to which this occurs is not well understood and difficult to quantify at this time. Regardless, the other benefits associated with increased tree and vegetation cover, such as reducing the urban heat island effect, may increase comfort and encourage more individuals to walk, ride their bikes, or take transit, indirectly reducing greenhouse gas emissions while contributing to the overall well-being of Lodi's residents.

As a supplement to the quantified measures in this CAP, two measures are included in the Green Infrastructure section that are not quantified, but rather focus on environmental stewardship and education through local agency partnerships and demonstration projects.

## GI-1.1 URBAN FOREST

### Partner with Tree Lodi to maintain and expand the urban forest.

Healthy urban forests can reduce greenhouse gas emissions through carbon sequestration, cool existing buildings as discussed in Measure E-3.3, and shade parking lots to reduce the urban heat island effect. The urban forest can also improve air quality, provide wildlife habitat, and provide shade for people walking or riding their bicycles.

Currently, the Department of Parks, Recreation and Cultural Services maintains all trees in Lodi's parks system, while the Public Works Department manages Lodi's street trees. The city is also undergoing a survey of existing street trees to determine potential planting locations for new trees. Tree Lodi, a local non-profit group, has assisted the city with the maintenance of its street trees in recent years, and the city sees an opportunity to leverage their relationship through a memorandum of understanding to describe the ways in which Tree Lodi can be more involved in the overall management of the city's urban forest. Such a partnership can expand the urban canopy through planting new trees, while ensuring the proper care and maintenance of all trees in the urban forest.

ACTION STEPS	A	Work with Tree Lodi to outline their role in the management and expansion of the urban forest through a memorandum of understanding.
	B	Support Tree Lodi in outreach efforts, utilizing existing informational materials about the benefits of Lodi's urban forest to encourage the planting of additional trees on private property.

COST	PUBLIC	\$\$\$	PRIVATE	0	RESPONSIBILITY	Public Works Department
						Parks, Recreation and Cultural Services
						Tree Lodi

CO-BENEFITS	QUALITATIVE	Improved Water Quality	GHG REDUCTIONS	Supporting Measure Not Quantified
		Reduced Storm Water Runoff		
		Reduced Urban Heat Island Effect		
		Improved Air Quality		

## GI-1.2 EDUCATION AND OUTREACH

### Partner with a local business or agency in a green infrastructure demonstration project.

A green infrastructure demonstration project could include a living wall, green roof, or urban rain garden. Living walls and green roofs help to insulate a building, retain water during storms, increase energy efficiency of buildings, and contribute to local wildlife habitats. Rain gardens are vegetated depressions that allow storm water runoff to slowly filtrate through the soil, relieving pressure on storm drains and other urban infrastructure.

The city could partner with local businesses or the school district to create a demonstration living wall, green roof, or rain garden, which would show the community how such innovative projects can provide multiple benefits, which also contribute to GHG reductions.

ACTION STEPS	A	Construct a green roof on City Hall or a building in the Downtown area. Provide informational signs at ground level with before/after photos and descriptions of the benefits, including extended roof life, enhanced building insulation, natural habitat for birds and insects, and storm water management. Organize rooftop tours for building owners interested in green roof installation.				
	B	Work with LUSD to install a rain garden that allows storm water runoff from a roof, walkway, or parking lot to infiltrate into the ground. Provide informational displays on-site and on the city's and LUSD's websites explaining the benefits and functions of the system, irrigation water savings, and costs/benefits of the project.				
COST	PUBLIC	Varies	PRIVATE	0	RESPONSIBILITY	Public Works Department Parks, Recreation and Cultural Services Lodi Unified School District

## Target Achievement

By 2020, implementation of the State and federal actions identified in Chapter 3 and the City's greenhouse gas reduction measures are anticipated to reduce communitywide emissions reductions of 150,528 MT CO<sub>2</sub>e/year and achieve a community efficiency level of 4.3 MT CO<sub>2</sub>e/ service population/ year. This level of reduction would surpass the City's adopted 2020 emissions target of 4.5 MT CO<sub>2</sub>e/ service population/ year. Table 4.2 demonstrates the anticipated level of reductions in 2020.

Table 4.3 demonstrates that by 2030, implementation of City's CAP is anticipated to reduce communitywide emissions by approximately 240,304 MT CO<sub>2</sub>e/year and achieve a community efficiency level of 4.1 MT CO<sub>2</sub>e/ service population/ year. This level of reduction falls short of the City's adopted 2030 emissions target of 3.0 MT CO<sub>2</sub>e/ service population/ year. The City anticipates that additional State actions will contribute greatly to the closing of this gap. The City will reevaluate 2030 target achievement and potential local actions once the next round of State actions has been defined.

**Table 4.2: Reduction Potential of Recommended Measures and State and Federal Actions**

## **Chapter 5-Implementation**

This CAP represents the community-wide actions that the city of Lodi will implement and update, accordingly, with the Lodi General Plan. These measures are to serve as the beginning of what the city intends to do in order to reduce GHG emissions. The city staff will be expected to alter or amend any measure to ensure GHG emissions reduction targets are met. This chapter discusses measure implementation, evaluation and evolution of the CAP, benefits and the CEQA streamlining process.

## Measure Implementation Progress and Achievements

Ensuring that the measures translate to on-the-ground results is critical to the success of the CAP. To facilitate this, each measure described in Chapter 4 contains a table identifying specific actions the City will implement. The table also identifies responsible departments and establishes an implementation timeframe for each action.

The second section of each table provides performance targets that allow staff, the Board of Supervisors, and the public to track measure implementation and monitor overall CAP progress. These targets are suitable benchmarks to monitor implementation progress. They are indicators to evaluate if a measure is achieving the necessary GHG reductions. Table 5-1 provides a summary of these benchmarks for easy reference. The list also illustrates the measure's sector applicability and if a measure is either mandatory or optional.

Upon adoption of the CAP, identified City departments will be responsible for implementing appropriate action measures of the CAP. Responsible staff in each department will facilitate and oversee action implementation. CAP implementation meetings will occur regularly to assess the status of CAP measure progress and the City's efforts. Some actions will require interdepartmental or inter-agency cooperation and appropriate partnerships will need to be established accordingly.

## Plan Evaluation and Evolution

The CAP lays out a comprehensive, communitywide strategy to reduce greenhouse gasses (GHGs) and improve community sustainability. City staff will evaluate the CAP's performance over time and be prepared to alter or amend the plan if it is not achieving the reduction target

## Plan Evaluation

There are two important types of performance evaluation: evaluation of the CAP as a whole and evaluation of the individual measures. Subsequent communitywide GHG emission inventories provide the best indication of CAP effectiveness, and will allow actual growth to be reconciled with growth projected by the General Plan and CAP. Conducting periodic inventories will allow comparison to the 1990 baseline and will demonstrate the CAP's ability to achieve proposed reduction targets.

The Planning Division will coordinate community inventories every three to five years beginning in 2015 to measure performance and progress towards achieving emission reduction targets.

While inventories provide information about overall emission reductions, it is also important to understand the efficacy of individual measures. Evaluating the emission reduction capacity, cost, and benefit of individual measures improves County staff and decision makers' ability to manage and implement the CAP.

Evaluating CAP measure performance requires monitoring the level of community participation and the GHG reduction capacity. The progress indicators, provided within each quantified measure, identify the level of participation and performance required to achieve the estimated level of GHG reduction. By evaluating whether the implementation of a measure is on track to achieve its progress indicators, the County can identify successful measures and reevaluate or replace under-performing ones.

CEQA Guidelines Section 15183.5(b)(1)(E) requires that the City amend the CAP if it finds that the plan is not achieving the adopted GHG reduction target. The Planning and Public Works Department will evaluate measures every two years beginning in 2013, and will summarize progress toward meeting the GHG reduction target at that time in a report to the Board of Supervisors that describes:

- + Estimated annual GHG reductions;
- + (compared to 1990, 2008, and subsequent inventory years);
- + Achievement of progress indicators;
- + Participation rates (where applicable);
- + Implementation costs;
- + Community benefits realized;
- + Remaining barriers to implementation; and
- + Recommendations for changes to the CAP.

## **Plan Evolution**

To remain relevant, the City must be prepared to adapt and transform the CAP over time. It is likely that new information about climate change science and risk will emerge, new GHG reduction technologies and innovative municipal strategies will be developed, new financing will be available, and State and federal legislation will change. It is also possible that future inventories will indicate that the community is not achieving its adopted target. As part of the evaluations identified above, the City will assess the implications of new scientific findings and technology, explore new opportunities for GHG reduction, respond to changes in climate policy, and incorporate these changes in future updates to the CAP to ensure an effective and efficient program.

# Executive Summary

## City of Lodi Profile

The City of Lodi covers over 12 square miles and ranges from Lodi Lake to Cherokee Memorial Park. The City of Lodi had an estimated population of 62,000 in 2008. With 458 city employees in the year 2008, there was a ratio of approximately 7.3 employees per one thousand residents. The City of Lodi's total budget was \$ 213,347,142 for fiscal year 2007-2008 and \$ 187,032,383 for fiscal year 2008-2009.

Lodi is located within Climate Zone 12,<sup>1</sup> according to the U.S. Department of Energy. Climate Zone 12 is classified as a Mediterranean climate, by the Köppen Classification System, and is characterized by hot summers and mild winters. Lodi experiences a climate similar to the Stockton area, which recorded 3,066 heating degree days<sup>2</sup> and 1,482 cooling degree days in 2008.<sup>3</sup>

## The Purpose of Conducting an Inventory

Each day, local governments operate buildings, vehicle fleets, street lights, traffic signals, water systems, and wastewater plants; local government employees consume resources commuting to work and generate solid waste which is sent for disposal. All of these activities directly or indirectly cause the release of carbon dioxide and other greenhouse gases into the atmosphere. This report presents the findings and methodology of a local government operations (LGO) greenhouse gas emissions inventory for City of Lodi. The inventory measures the greenhouse gas emissions resulting specifically from City of Lodi's government operations, arranged by sector to facilitate detailed analysis of emissions sources. The inventory addresses where and what quantity of emissions are generated through various local government activities. Through analysis of a local government's emissions profile, the City of Lodi can tailor strategies to achieve the most effective greenhouse gas emission reductions.

Strategies by which local governments can significantly reduce emissions from their operations include increasing energy efficiency in facilities and vehicle fleets, utilizing renewable energy sources, reducing waste, and supporting alternative modes of transportation for employees. The benefits of these actions include lower energy bills, improved air quality, and more efficient government operations, in addition to the mitigation of local and global climate change impacts. By

<sup>2</sup> Heating and Cooling Degree Days are a measurement designed to reflect demand for energy needed to heat or cool a facility, and are calculated as the difference between the average daily temperature for a region and a baseline temperature (usually 65° or 80° F). HDD value is the summation of degrees of the average temperature per day below 65° F for the year. CDD is the summation of degrees of the average temperature per day above 80° F for the year.

<sup>3</sup> NNDC Climate Data, retrieved from <http://www7.ncdc.noaa.gov/CDO/CDODivisionalSelect.jsp>

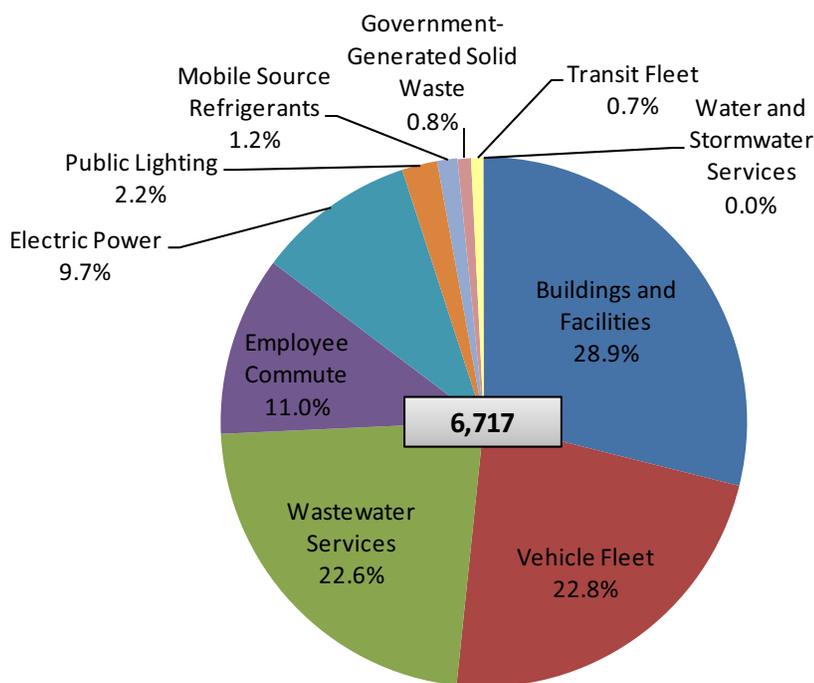

striving to save taxpayer money through efficient government operations, City of Lodi is working to improve government services in a smart and targeted way that will benefit all of the City/County's residents.

By conducting this inventory, City of Lodi is acting now to limit future impacts that threaten the lives and property of Lodi's residents and businesses, make government operations more efficient, and improve the level of service it offers to the residents of Lodi.

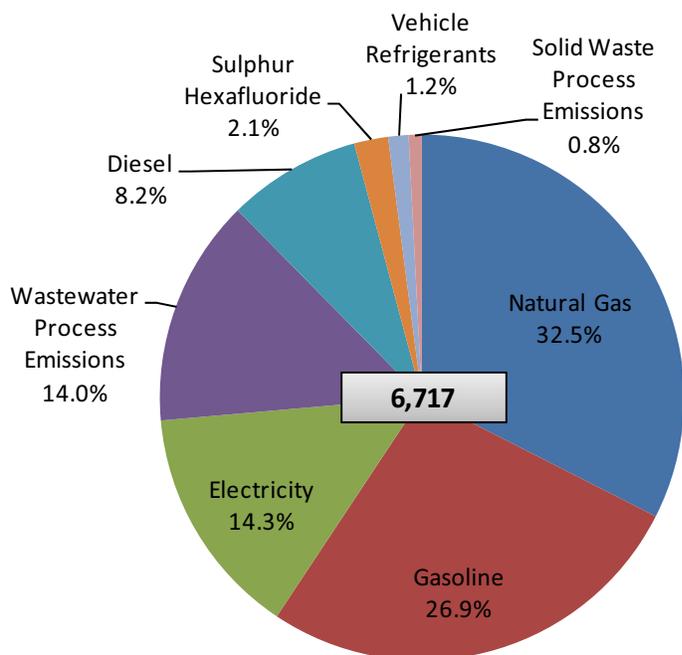

## Inventory Results

The following figures summarize the results of the LGO greenhouse gas emissions inventory for the City of Lodi, by sector and source. As illustrated in Figure 1, the sector producing the most greenhouse gas emissions in the City of Lodi is the Buildings and Facilities sector at 28.9%, followed by the Vehicle Fleet sector at 22.8%. As shown in Figure 2, Natural Gas and Gasoline are the sources with the greatest percentage of emissions (32.5% and 26.9% respectively). Table 1 delineates the different types of greenhouse gases (CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O, etc.), which are assigned a standard metric of carbon dioxide equivalent (CO<sub>2</sub>e), and then combined to describe the City's total emissions by Scope.

**Figure 1: 2008 Government Operations CO<sub>2</sub>e Emissions by Sector**

For more detail on the concepts of scopes, sources, and sectors, and to review more granular data produced through the inventory study, please refer to the full report on the following pages.

## Regional and Local Context

### Climate Change Mitigation Activities in California

Since 2005, the State of California has responded to growing concerns over the effects of climate change by adopting a comprehensive approach to addressing emissions in the public and private sectors. This approach was officially initiated with the passage of the Global Warming Solutions Act of 2006 (AB 32), which requires the state to reduce its greenhouse gas emissions to 1990 levels by 2020. The AB 32 Scoping Plan was developed to identify strategies for meeting the AB 32 goal, and was adopted by ARB in December 2008. Among many other strategies, it encourages local

governments to reduce emissions in their jurisdictions by 15 percent below current levels by 2020. In addition, it identifies the following strategies that will impact local governance:

- Develop a California cap-and-trade program
- Expand energy efficiency programs
- Establish and seek to achieve reduction targets for transportation-related related greenhouse gas (GHG) emissions
- Expand the use of green building practices
- Increase waste diversion, composting, and commercial recycling toward zero-waste
- Continue water efficiency programs and use cleaner energy sources to move and treat water
- Reduce methane emissions at landfills
- Preserve forests that sequester carbon dioxide

Other measures taken by the state include mandating stronger vehicle emissions standards (AB 1493, 2002), establishing a low-carbon fuel standard (EO # S-01-07, 2007), mandating a climate adaptation plan for the state (S-EO # 13-08, 2008), establishing a Green Collar Job Council, and establishing a renewable energy portfolio standard for power generation or purchase in the state. The state also has made a number of legislative and regulatory changes that have significant implications for local governments:

- SB 97 (2007) required the Office of Planning and Research to create greenhouse gas planning guidelines for the California Environmental Quality Act (CEQA). In addition, ARB is tasked with creating energy-use and transportation thresholds in CEQA reviews, which may require local governments to account for greenhouse gas emissions when reviewing project applications.
- AB 811 (2007) authorizes all local governments in California to establish special districts that can be used to finance solar or other renewable energy improvements to homes and businesses in their jurisdiction.
- SB 375 (2008) revises the process of regional transportation planning by metropolitan planning organizations (MPOs), which are governed by elected officials from local jurisdictions. The statute calls on ARB to establish regional transportation-related GHG targets and requires the large MPOs to develop regional “Sustainable Communities Strategies” of land use, housing and transportation policies that will move the region towards its GHG target. The statute stipulates that transportation investments must be consistent with the Sustainable Communities Strategy and provides CEQA streamlining for local development projects that are consistent with the Strategy.

### **Pacific Gas and Electric Company Supported Inventory Project**

With the administrative support of Pacific Gas and Electric Company (PG&E) and funding from California utility customers under the auspices of the California Public Utilities Commission, the Great Valley Center was contracted to assist in the quantification of municipal greenhouse gas emissions for the City of Lodi and the following other

participating communities throughout 2012: the Counties of San Joaquin, Stanislaus and Merced and the cities of Atwater, Dos Palos, Gustine, Los Banos, Manteca and Tracy.

### **Climate Change Mitigation Activities in City of Lodi**

The City of Lodi is currently preparing a community-wide greenhouse gas emissions inventory and reduction strategy in sequence with the municipal inventory as part of its Climate Action Planning process. The Climate Action Plan will identify the significant sources of greenhouse gas emissions that can be influenced and/or controlled through various governmental actions, including federal, State and local actions. Mitigation measures are being planned to address the State's AB 32 goals.

# Introduction

## General Methodology

### Local Government Operations Protocol

A national standard called the Local Government Operations Protocol (LGO Protocol) has been developed and adopted by the California Air Resources Board (ARB). This standard provides accounting principles, boundaries, quantification methods, and procedures for reporting greenhouse gas emissions from local government operations. The LGO Protocol forms the basis of the Clean Air & Climate Protection Software (CACP 2009), which allows local governments to compile data and perform the emissions calculations using standardized methods.

### Greenhouse Gases and Carbon Dioxide Equivalent

In accordance with LGO Protocol recommendations, CACP 2009 calculates and reports all six internationally recognized greenhouse gases regulated under the Kyoto Protocol (Carbon Dioxide, Methane, Nitrous Oxide, Hydrofluorocarbons, Perfluorocarbons, and Sulfur Hexafluoride). Emissions summaries found throughout this report also use CACP 2009's ability to combine emissions from the various greenhouse gases into carbon dioxide equivalent, CO<sub>2</sub>e. Since equal quantities of each greenhouse gas have more or less influence on the greenhouse effect, converting all emissions to a standard metric, CO<sub>2</sub>e, allows apples-to-apples comparisons amongst quantities of all six emissions types. Greenhouse gas emissions are reported in this inventory as metric tons of CO<sub>2</sub>e (MTCO<sub>2</sub>e).

Table 2 exhibits the greenhouse gases and their global warming potential (GWP), a measure of the amount of warming a greenhouse gas may cause compared to the amount of warming caused by carbon dioxide.

**Table 2: Greenhouse Gases**

Gas	Chemical Formula	Activity	Global Warming Potential (CO <sub>2</sub> e)
Carbon Dioxide	CO <sub>2</sub>	Combustion	1
Methane	CH <sub>4</sub>	Combustion, Anaerobic Decomposition of Organic Waste (Landfills, Wastewater), Fuel Handling	21
Nitrous Oxide	N <sub>2</sub> O	Combustion, Wastewater Treatment	310
Hydrofluorocarbons	Various	Leaked Refrigerants, Fire Suppressants	12–11,700
Perfluorocarbons	Various	Aluminum Production, Semiconductor Manufacturing, HVAC Equipment Manufacturing	6,500–9,200
Sulfur Hexafluoride	SF <sub>6</sub>	Transmission and Distribution of Power	23,900

## Calculating Emissions

In general, emissions can be quantified in two ways.

**1. Measurement-based methodologies** refer to the direct measurement of greenhouse gas emissions from a monitoring system. Emissions measured this way may include those emitted from a flue of a power plant, wastewater treatment plant, landfill, or industrial facility. This method is the most accurate way of inventorying emissions from a given source, but is generally available for only a few sources of emissions.

**2. Calculation-based methodologies** refer to an estimate of emissions calculated based upon measurable *activity data* and *emission factors*. Table 3 provides examples of common emissions calculations.

**Table 3: Basic Emissions Calculations**

Activity Data	x	Emissions Factor	=	Emissions
Electricity Consumption (kilowatt hours)		CO <sub>2</sub> emitted/kWh		CO <sub>2</sub> emitted
Natural Gas Consumption (therms)		CO <sub>2</sub> emitted/therm		CO <sub>2</sub> emitted
Gasoline/Diesel Consumption (gallons)		CO <sub>2</sub> emitted /gallon		CO <sub>2</sub> emitted
Waste Generated by Government Operations (tons)		CH <sub>4</sub> emitted/ton of waste		CH <sub>4</sub> emitted

## The Scopes Framework

This inventory reports greenhouse gas emissions by sector and additionally by “scope”, in line with the LGO Protocol and World Resources Institute (WRI) and World Business Council for Sustainable Development (WBCSD) Greenhouse Gas Emissions Protocol Corporate Standard.

**Scope 1:** Direct emissions from sources within a local government’s operations that it owns and/or controls, with the exception of direct CO<sub>2</sub> emissions from biogenic sources. This includes stationary combustion to produce electricity, steam, heat, and power equipment; mobile combustion of fuels; process emissions from physical or chemical processing; fugitive emissions that result from production, processing, transmission, storage and use of fuels; leaked refrigerants; and other sources.

**Scope 2:** Indirect emissions associated with the consumption of purchased or acquired electricity, steam, heating, or cooling.

**Scope 3:** All other emissions sources that hold policy relevance to the local government that can be measured and reported. This includes all indirect emissions not covered in Scope 2 that occur as a result of activities within the operations of the local government. Scope 3 emission sources include (but are not limited to) tailpipe emissions from employee commutes, employee business travel, and emissions resulting from the decomposition of government-generated solid waste.

LGO Protocol provides standard methodologies for calculating emissions from the sources shown in Table 4. Other sources of emissions, such as those associated with the production of consumed products do not yet have standard calculation methodologies and are thus excluded from this inventory.

**Table 4: Inventoried Emissions Sources by Scope**

Scope 1	Scope 2	Scope 3
Fuel consumed at facilities	Purchased electricity consumed by facilities	Solid waste generated by government operations
Fuel consumed by vehicle fleet and mobile equipment	Purchased electricity consumed by electric vehicles*	Fuel consumed by vehicles during employee commuting
Fuel consumed to generate electricity		
Leaked refrigerants from facilities and vehicles		
Fugitive HFC Emissions from electricity transmission and distribution		
Solid waste in government landfills		
Wastewater decomposition and treatment at a municipal wastewater treatment plant		

### Organizational Boundaries

The organizational boundary for the inventory determines which aspects of operations are included in the emissions inventory, and which are not. Under the LGO Protocol, two control approaches are used for reporting emissions: operational control or financial control. A local government has operational control over an operation if it has full authority to introduce and implement policies that impact the operation. A local government has financial control if the operation is fully consolidated in financial accounts. If a local government has joint control over an operation, the contractual agreement will have to be examined to see who has authority over operating policies and implementation, and thus the responsibility to report emissions under operational control.

LGO Protocol strongly encourages local governments to utilize operational control as the organization boundary for a government operations emissions inventory. Operational control is believed to most accurately represent the emissions sources that local governments can most directly influence, and this boundary is consistent with other environmental and air quality reporting program requirements. For this reason, this inventory was conducted according to the operational control framework.

### Types of Emissions

As described in the LGO Protocol, emissions from each of the greenhouse gases can come in a number of forms:

**Stationary or mobile combustion:** These are emissions resulting from on-site combustion of fuels (natural gas, diesel, gasoline, etc.) to generate heat, electricity, or to power vehicles and mobile equipment.

**Purchased electricity:** These are emissions produced by the generation of power from utilities outside of the jurisdiction.

**Fugitive emissions:** Emissions that result from the unintentional release of greenhouse gases into the atmosphere (e.g., leaked refrigerants, methane from waste decomposition, etc.).

**Process emissions:** Emissions from physical or chemical processing of a material (e.g., wastewater treatment).

### **Significance Thresholds**

Within any local government's own operations there will be emission sources that fall within Scope 1 and Scope 2 that are minimal in magnitude and difficult to accurately measure. Within the context of local government operations, emissions from leaked refrigerants and backup generators may be common sources of these types of emissions. For these less significant emissions sources, LGO Protocol specifies that up to 5 percent of total emissions can be reported using methodologies that deviate from the recommended methodologies in LGO Protocol. In the context of registering emissions with an independent registry (such as the California Climate Action Registry), emissions that fall under the significance threshold are called *de minimis*.

In this report, the following emissions fell under the significance threshold and were reported using best available methods:

- Scope 1 fugitive emissions from leaked refrigerants from vehicles and equipment

In this report, some emissions were calculated using methods that deviate from the methods recommended in the LGO Protocol. However, the LGO Protocol identifies several alternative methods that still meet emission calculation standards. For the following areas, alternative methods were used to calculate emissions:

- Scope 2 CO<sub>2</sub>, CH<sub>4</sub> and N<sub>2</sub>O emissions from purchased electricity used in City facilities were calculated using the CARB California Grid Average electricity emissions factor

In addition, emissions data from the following sources could not be obtained for this report and therefore emissions from these sources are not included in this inventory:

- Scope 1 fugitive emissions from the leakage of refrigerants from stationary heating, air conditioning, and refrigeration units
- Scope 1 fugitive emissions from leaked/deployed fire suppressants

## Information Items

Information items are emissions sources that are not included as Scope 1, 2, or 3 emissions in the inventory, but are reported here separately in order to provide a more complete picture of emissions from the City of Lodi's government operations.

A common emission that is categorized as an information item is carbon dioxide emitted in the combustion of biogenic fuels. Local governments will often burn fuels that are of biogenic origin (wood, landfill gas, organic solid waste, biofuels, etc.) to generate power. Common sources of biogenic emissions are the combustion of landfill gas from landfills or biogas from wastewater treatment plants, as well as the incineration of organic municipal solid waste at incinerators.

Carbon dioxide emissions from the combustion of biogenic fuels are not included in Scope 1 based on established international principles. Methane and nitrous oxide emissions from biogenic fuels are considered Scope 1 stationary combustion emissions and are included in the stationary combustion sections for the appropriate facilities. These principles indicate that biogenic fuels (e.g., wood, biodiesel), if left to decompose in the natural environment, would release CO<sub>2</sub> into the atmosphere, where it would then enter back into the natural carbon cycle. Therefore, when wood or another biogenic fuel is combusted, the resulting CO<sub>2</sub> emissions are akin to natural emissions and should therefore not be considered as human activity-generated emissions. The CH<sub>4</sub> and N<sub>2</sub>O emissions, however, would not have occurred naturally and are therefore included as Scope 1 emissions.

The emissions categorized as information items in this inventory are presented below in Table 5. Information items quantified for this inventory include:

- Scope 1 emissions from natural gas consumption by backup generators at the CT1 generation plant
- Scope 2 emissions from consumption of electricity at the CT1 generation plant

**Table 5: Information Items**

INFORMATION ITEMS	
	CO <sub>2</sub> e
CT1 Emergency Generator (Natural Gas)	68.14
CT1 Plant Electricity Consumption	11.00
<b>Total Information Items</b>	<b>79.14</b>

## Understanding Totals

It is important to realize that the totals and sub-totals listed in the tables and discussed in this report are intended to represent all-inclusive, complete totals for the City of Lodi's operations. However, these totals are only a summation of inventoried emissions using available estimation methods. Each inventoried sector may have additional emissions sources associated with them that were unaccounted for, such as Scope 3 sources that could not be estimated.

Also, local governments provide different services to their citizens, and the scale of the services (and thus the emissions) is highly dependent upon the size and purview of the local government. For these reasons, comparisons between local government totals should not be made without keen analysis of the basis for figures and the services provided.

# Inventory Results

## Emissions Total

In 2008, the City of Lodi's greenhouse gas emissions from government operations totaled 6,717 metric tons of CO<sub>2</sub>e. This number represents a roll-up of emissions. While the roll-up is a valuable figure, information on the breakdown of emissions from local government operations by scopes, sources, and sectors allows the comparative analysis and insight needed for effective decision-making on target setting, developing GHG reduction measures, or monitoring. The LGO Protocol identifies reporting by scopes, sources, and sectors as the strongly preferred form of reporting a greenhouse gas inventory. For more details on the breakdown of City of Lodi's emissions by scopes, sources, and sectors, refer to subsequent sections within Inventory Results in this report.

## Buildings and Other Facilities

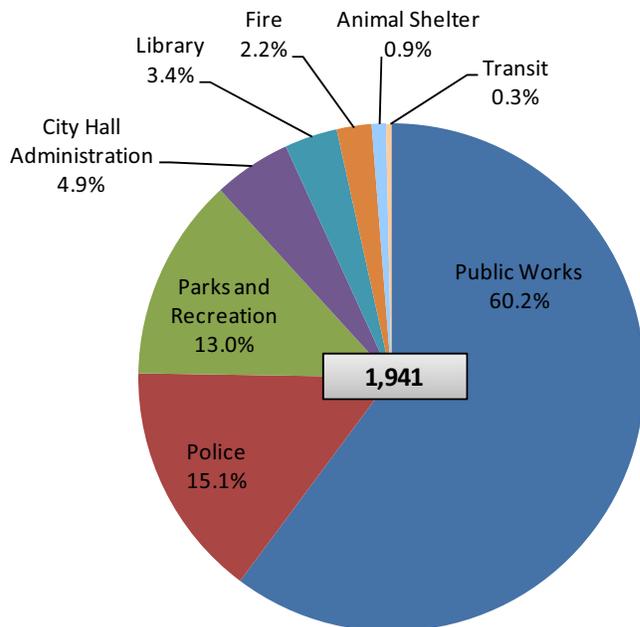

Facility operations contribute to greenhouse gas emissions in two major ways. First, facilities consume electricity and fuels such as natural gas. This consumption is associated with the majority of greenhouse gas emissions from facilities. In addition, fire suppression, air conditioning, and refrigeration equipment in buildings can emit hydrofluorocarbons (HFCs) and other greenhouse gases when these systems leak refrigerants or fire suppressants. Refrigerants and fire suppressants are very potent greenhouse gases, and have Global Warming Potential (GWP) of up to many thousand times that of CO<sub>2</sub>. For example, HFC-134a, a very common refrigerant, has a GWP of 1300, or 1300 times that of CO<sub>2</sub>. Therefore, even small amounts of leaked refrigerants can have a significant effect on greenhouse gas emissions.

City of Lodi operates several facilities, ranging from general offices to parks. For the purpose of reporting emissions, these facilities were grouped by department. Data relating to natural gas consumption were obtained from PG&E. Data relating to electricity consumption were obtained from both LEU and PG&E.

The Buildings and Facilities sector produced the largest amount of emissions by sector. Overall, these facilities produced 1,941 metric tons of CO<sub>2</sub>e (28.9% of total emissions). As illustrated in Figure 3 and Table 6, the facility group producing the most greenhouse gas emissions in the City of Lodi is the Public Works facility group at 60.2%. The second largest contributor is the Police facility group at 15.1%.

As illustrated in Figure 4, the source producing the most greenhouse gas emissions in the Buildings and Facilities sector is Natural Gas at 94.7%, followed by Electricity at 5.3%. Emissions from electricity consumption are lower by comparison due to the fact that Lodi receives electricity from the Northern California Power Agency, which reports low emissions factors from power generation.

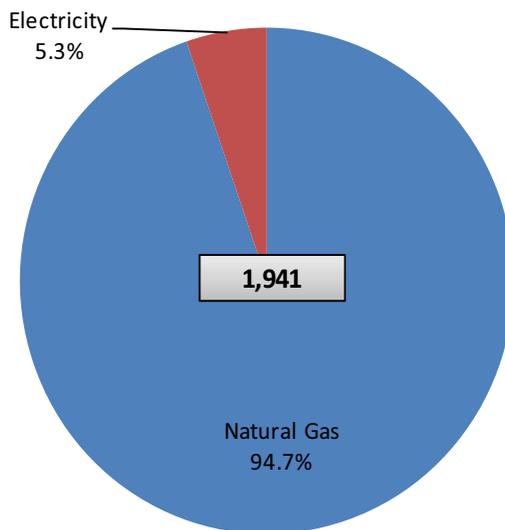

**Figure 3: Buildings and Other Facilities Emissions by Department**

**Table 6: Buildings and Other Facilities Emissions by Department**

Department	metric tons CO <sub>2</sub> e
Public Works	1,167.96
Police	292.70

## Streetlights, Traffic Signals, and Other Public Lighting

Like most local governments, City of Lodi operates a range of public lighting including traffic signals and streetlights. The majority of emissions associated with the operation of this infrastructure are due to electricity consumption. Data relating to electricity consumption for public lighting were obtained from both LEU and PG&E.

The Public Lighting sector produced the sixth-largest amount of emissions of all sectors overall, but this comparison is distorted by the lack of kWh reported for other public lighting operation data that were not collected. Overall, these facilities produced 145 metric tons of CO<sub>2</sub>e (2.2% of total emissions). As illustrated in Figure 5 and Table 9, the subsector producing the most greenhouse gas emissions in the Public Lighting sector are Streetlights at 97.4%, followed by Traffic Signals at 2.6%.

**Figure 5: Public Lighting Emissions by Subsector**

**Table 9: Public Lighting Emissions by Subsector**

Subsector (Light Type)	metric tons CO <sub>2</sub> e	% of Sector Emissions	Electricity Use (kWh)
Streetlights	141.25	97%	5,240,885

## Water Delivery Facilities

This sector includes emissions from equipment used for the distribution or transport of water, including drinking water, sprinkler systems and irrigation. The City of Lodi operates a range of water transport equipment. Electricity consumption and the on-site combustion of fuels such as natural gas are significant sources of greenhouse gas emissions from the operation of City of Lodi’s water transport equipment. Data relating to electricity consumption were obtained from PG&E. Data relating to fuel consumption were obtained from PG&E.

The Water Transport sector produced the smallest amount of emissions overall, with 3 metric tons of CO<sub>2</sub>e (less than 0.1% of total emissions). As illustrated in Figure 6 and Table 11, the subsector producing the most greenhouse gas emissions in the Water Transport sector is Water Delivery Pumps at 77.4%, followed by Stormwater Management at 22.6%.

**Figure 6: Water Delivery Facilities Emissions by Subsector**

## Wastewater Treatment Facilities

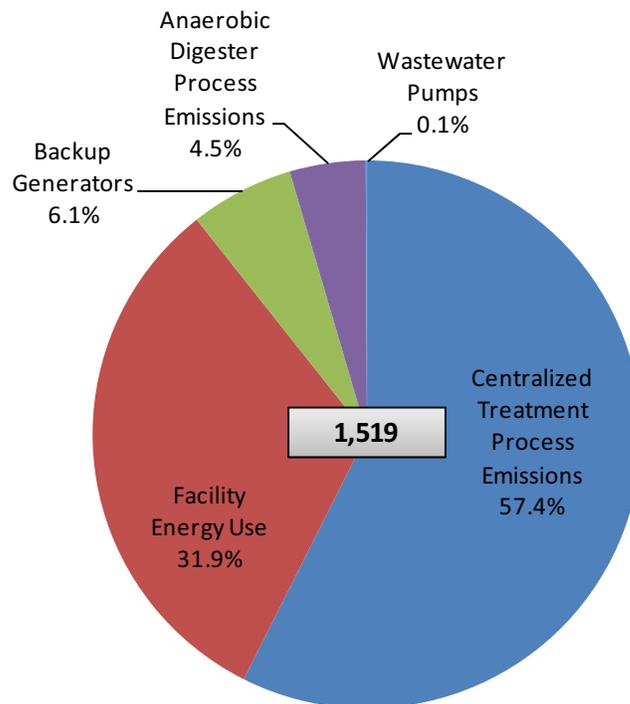

Wastewater coming from homes and businesses is rich in organic matter and has a high concentration of carbon and nitrogen (along with other organic elements). As wastewater is collected, treated, and discharged, chemical processes in aerobic and anaerobic conditions lead to the creation and emission of two greenhouse gases: methane and nitrous oxide. Local governments that operate wastewater treatment facilities, including treatment plants, septic systems, collection lagoons, and other facilities, must therefore account for the emission of these gases.

Electricity consumption and the on-site combustion of fuels such as natural gas and diesel are also significant sources of greenhouse gas emissions from the operation of wastewater treatment facilities. Data relating to electricity consumption were obtained from PG&E. Data relating to backup generators and fuel consumption were obtained from Public Works.

The City of Lodi has operated the White Slough Wastewater Treatment Facility since 1966. The treatment plant covers approximately 1,040 acres. In 2008, these facilities served approximately 63,313 people, including the residents and businesses located in other jurisdictions.

The Wastewater Treatment sector produced the third-largest amount of emissions in this inventory. Overall, this facility produced 1,519 metric tons of CO<sub>2</sub>e (22.6% of total emissions). As illustrated in Figure 7 and Table 13, the subsector producing the most greenhouse gas emissions in the Wastewater Treatment sector is Centralized Treatment Process Emissions at 57.4%, followed by Facility Energy Use at 31.9%.

**Figure 7: Wastewater Treatment Facilities Emissions by Subsector**

## Power Generation Facilities

Emissions from power generation are due to the combustion of fuels (natural gas, coal, etc.) to generate electricity. Emissions can also come from purchased electricity used by the utility, transmission and distribution losses, and the emission of sulfur hexafluoride from power transmission lines.

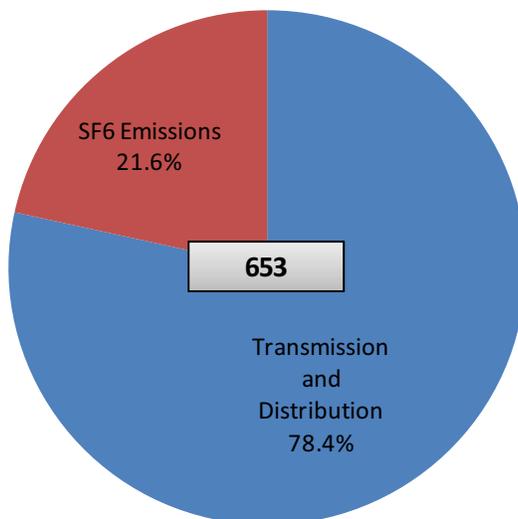

City of Lodi is one of the relatively few local governments in California that operates a municipal utility. In order to serve their residents’ and businesses’ energy needs, municipal utilities can perform a variety of functions—among others, this may include generating electricity, purchasing natural gas and other fuels, and purchasing renewable energy offsets. This allows the City of Lodi more flexibility in determining how “clean” the electricity is (what proportion of electricity comes from renewable or low-polluting sources), and provides an excellent opportunity for effective emissions reduction within the City’s operations.

Lodi Electric Utility is a publicly owned utility provider (POU) which services the City of Lodi and surrounding areas. LEU procures electricity through the Northern California Power Agency (NCPA), a joint powers authority. The NCPA purchases and generates electricity on behalf of member entities. Since electricity generation at LEU facilities is part of the NCPA collaborative, emissions from these activities are not counted toward the City of Lodi's municipal GHG emissions inventory. However, the City does own and operate local transmission and distribution lines. Transmission and distribution of electricity is inherently inefficient, so emissions associated with transmission losses are included in

this inventory. Additionally, transmission and distribution lines are insulated by chemicals, such as SF<sub>6</sub>, which release GHG emissions when leaked. SF<sub>6</sub> leakage is also included in this inventory.

The Power Generation Facilities sector produced the fifth-largest amount of emissions in this inventory. Overall, these facilities produced 653 metric tons of CO<sub>2</sub>e (9.7% of total emissions). As illustrated in Figure 8 and Table 15, the subsector producing the most greenhouse gas emissions in the Power Generation Facilities sector was the Transmission and Distribution system at 78.4%, followed by SF<sub>6</sub> Emissions at 21.6%.

**Figure 8: Power Generation Facilities Emissions by Facility**

## Vehicle Fleet and Mobile Equipment

The vehicles and mobile equipment used in the City of Lodi's daily operations include: heavy duty trucks responding to emergency fire calls; heavy and light trucks used for landscape and maintenance tasks; passenger cars, light trucks, and sport utility vehicles (SUVs) driven on a variety of site visits, including building inspections; among others. Most vehicles consume gasoline, some consume diesel, some consume compressed natural gas (CNG), and each results in greenhouse gas emissions. Gasoline and diesel-powered maintenance equipment contributes to greenhouse gas emissions as well (22 pieces of equipment were reported). In addition, vehicles with air conditioning or refrigeration equipment use refrigerants that can leak from the vehicle.

The majority of vehicles in the fleet were used in the Public Works Department across a variety of divisions (e.g. Water, Streets, Park Maintenance, etc.). Other vehicles were used by the Police Department, Fire Department, and Administration, among others.

The Vehicle Fleet sector produced the second-largest amount of emissions in this inventory. Overall, this sector produced 1612 metric tons of CO<sub>2</sub>e (24.0% of total emissions). As illustrated in Figure 9 and Table 17, the source producing the most greenhouse gas emissions in the Vehicle Fleet sector was Gasoline at 72.8%, followed by Diesel at 21.9%. Emissions from vehicle fleet use by department are illustrated in Figure 10.

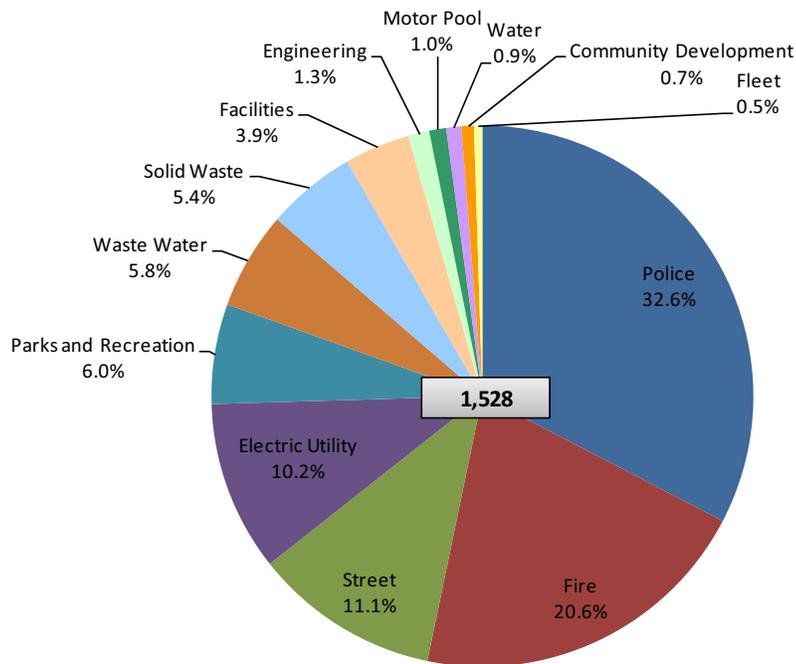

**Figure 9: Vehicle Fleet Emissions by Source**

**Table 17: Vehicle Fleet Emissions by Source**

Source	metric tons CO <sub>2</sub> e	Consumption Quantity	Consumption Units
Gasoline	1,172.77	132,092	US gal

## Transit Fleet

The vehicles and mobile equipment used in the City of Lodi’s public transportation operations, including buses, shuttles, and others, burn compressed natural gas (CNG), resulting in greenhouse gas emissions. In addition, vehicles with air conditioning or refrigeration equipment use refrigerants that can leak from the vehicle. These values were not provided assuming they are included in with the vehicle fleet.

The Transit Fleet sector produced the eighth-largest amount of emissions in this inventory. Overall, this sector produced 49.68 metric tons of CO<sub>2</sub>e (0.7% of total emissions). As illustrated in Table 19, the only source producing the greenhouse gas emissions in the Transit Fleet sector was CNG.

**Table 19: Transit Fleet Emissions by Source**

## Government-Generated Solid Waste

Many local government operations generate solid waste, much of which is eventually sent to a landfill. Typical sources of waste in local government operations include paper and food waste from offices and facilities, construction waste from public works, and plant debris from parks departments. Organic materials in government-generated solid waste (including paper, food scraps, plant debris, textiles, wood waste, etc.) generate methane as they decay in the anaerobic environment of a landfill. Emissions from the waste sector are an estimate of methane generation that will result from the anaerobic decomposition of all organic waste sent to landfill in the base year. It is important to note that although these emissions are attributed to the inventory year in which the waste is generated, the emissions themselves will occur over the 100+ year timeframe that the waste will decompose.

The Solid Waste sector produced the seventh-largest amount of emissions in this inventory. Overall, this sector produced 54.87 metric tons of CO<sub>2</sub>e (0.8% of total emissions). The breakdown of shares of waste generation by

department and/or location are reported in Figure 11 and Table 21. The subsector that produced the most waste was Parks and Recreation (not including Hutchins Square) at 32 metric tons of CO<sub>2</sub>e (57.8%).

**Figure 11: Government Waste Emissions by Subsector**

### Employee Commute

Emissions in the Employee Commute sector are due to combustion of fuels in vehicles used by government employees for commuting to work at the City of Lodi. Results from a survey are shown below. Current full-time City staff members were surveyed and 94 responses were collected, resulting in a sample of approximately 21% of employees at 2008 staff levels. The survey was used to collect the data needed to calculate emissions and also capture other information that will help the City set effective policy addressing this sector.

The Employee Commute sector produced the fourth-largest amount of emissions in this inventory. As seen in Table 23, this sector produced 739 metric tons of CO<sub>2</sub>e (11.0% of total emissions). Nearly all vehicles are fueled by gasoline, with only a few using diesel.

Tables 24 through 28 present summary information from preference-based questions included in the survey. This information is intended to inform the City of Lodi about potential transportation options to increase convenience and productivity while reducing the City’s impact on the environment.

# Inventory Methodologies

The Clean Air & Climate Protection Software (CACP 2009) made it possible to calculate greenhouse gas emissions for the following greenhouse gases: Carbon Dioxide, Methane, Nitrous Oxide, Hydrofluorocarbons, Perfluorocarbons, and Sulfur Hexafluoride. Activity data was collected for a number of operations through a number of methods. Activity data was stored in Master Data Workbook (MDWB), which serves as a tool for organizing and conditioning data, and, in some cases, calculating emissions. Data collection methods range from LGO Protocol-recommended, to LGO Protocol-alternative and non-LGO Protocol (but generally accepted) alternatives. The methods used depend on the availability and format of data. Inputting activity data into CACP 2009, along with the correct emission factor, resulted in the calculation of greenhouse gas emissions for the City of Lodi's 2008 government operations.

## Buildings and Other Facilities

The Building and Facilities sector of the inventory reports emission from two main sources: electricity and natural gas. The required data were obtained from the local government departments and regional utility providers. The utility companies that service City of Lodi's government facilities are:

- Pacific Gas and Electric (PG&E) – natural gas and electricity service
- Lodi Electric Utility (LEU) – electricity service

This data were acquired per request and approval from both the City of Lodi and the utility providers. The data were received in the following formats:

- PG&E electricity and natural gas (kWh/therms) – Excel spreadsheet indicating therms of consumption and cost by individual account
- LEU electricity (kWh) – Data table indicating kWh consumption and cost by address.

The data were then inserted into the corresponding section within the MDWB. The data were then sorted and conditioned in order to use the recommended method for reporting emissions.

## Buildings and Other Facilities: Electricity and Natural Gas Related Emission

According to the LGO Protocol, the recommended method for reporting emissions related to electricity consumption and natural gas combustion is summing the total number of kWh or therms (Activity Data) and multiplying the Activity Data by a corresponding emission factor. Emission factors are values that are reported by the utility company and are stored within CACP software.

- Summed Activity (kWh/therm) x Emissions Factor = GHG Emissions

The raw data were inserted into the spreadsheet labeled *FA-Utility Raw Data* (raw data must be kept without conditioning as a quality-control reference) and then copied to the spreadsheet labeled *FA-Utility Working Data* in the MDWB to be sorted. The data were sorted within the *FA-Utility Working Data* spreadsheet to isolate building facilities kWh and therm usage; premise type, account numbers, addresses, and service descriptions were categories used to sort the data. Once sorted, the data were copied to the *Building Working Data* spreadsheet, where they were separated into the different building facilities. The kWh and therms were then summed per individual facility and the values per facility and grand total are reflected in the *Building Final Data* spreadsheet.

After the *Building Final Data* spreadsheet was populated with all of the facilities and their kWh/therm usage, the information was entered into CACP. According to LGO protocol, inventory of kWh emissions for the Building and Facilities sector is reported as Scope 2-purchased electricity while the inventory of therm emission is reported as Scope 1-stationary combustion. A separate record is entered into CACP per facility's kWh and therm usage, making sure that the entry is reported under the correct Scope and with the correct emissions factor (differs for each utility provider).

### **Buildings and Other Facilities: Reporting Inconsistencies and Troubleshooting**

Electricity and natural gas data were conditioned according to the LGO protocol with some minor inconsistencies. While sorting the data to clearly identify the electricity and natural gas used per facility, there were some facilities that had only electricity or natural gas usage associated with them:

- Parks and Recreation (OFC) – natural gas data missing
- Parks and Recreation (SW/COR N STKN-E LOCUST) – electricity data missing
- Public Works (1331 S HAM LN UNIT B) – electricity data missing
- Public Safety Building – electricity data missing

The totals were reported with these inconsistencies assuming that the utility providers may have included the accompanying natural gas or electricity usage for the facility elsewhere (i.e. the facility shares a utility meter with another facility). Another explanation may be that the building does not use electricity or natural gas. For instance, some heating systems may be run completely by electricity, rendering natural gas service unnecessary.

Since LEU procures electricity through the Northern California Power Agency (NCPA), the emissions factors related to electricity use at City facilities must be taken from NCPA operations rather than LEU alone. NCPA's emissions factors tend to be lower than average, so it was important to utilize the appropriate factors for Scope 2 emissions calculations. While the format of emissions reported by NCPA to CARB and the Climate Registry were not compatible with CACP, 2005 emissions factors for NCPA were available. 2005 emissions factors were applied to all facilities utilizing NCPA power.

Facility refrigerants were omitted from the inventory due to unavailability of data. Thus, emissions in this sector may be slightly undercounted. Fire suppressants were also omitted from the inventory. According to the Facilities Services division, the City's extinguishers are serviced once per year. No further data could be acquired pursuant to LGO protocol recommended methods.

During the course of this inventory, backup power generator fuel records were requested from the Facilities Services division, LEU, and White Slough Wastewater Treatment Facility. While data were acquired for the latter two facilities (reported in the Power Generation and Wastewater Treatment sectors), backup generator data could not be obtained for general buildings and facilities. Thus, emissions in this sector may be slightly undercounted.

## Streetlights and Traffic Signals

The Lighting sector of the inventory reports emission from one main source, electricity. The required data were obtained from the regional utility providers. The utility company that services City of Lodi's lighting is:

- LEU – electricity service

This data were acquired per request and approval from both the City of Lodi and LEU. The data were received in the following formats:

- LEU Traffic Signals (kWh) – Data table indicating electricity consumption by month
- LEU Streetlights (kWh) – Aggregate value for electricity consumption and total number of streetlights

The data were inserted into the corresponding section within the MDWB public lighting final data tab. The recommend method was used for reporting emissions.

### Lighting: Electricity Related Emission

According to the LGO Protocol, the recommended method for reporting emissions related to electricity consumption is summing the total number of kWh (Activity Data) and multiplying the Activity Data by a corresponding emission factor. Emission factors are values that are reported by the utility company and are stored within CACP software.

- Summed Activity (kWh) x Emissions Factor = GHG Emissions

The raw data were provided as aggregate values, requiring no further conditioning. After the *Public Lighting Final Data* spreadsheet was populated with the kWh usage, the information was entered into CACP. According to the LGO protocol, the inventory of kWh emissions for the Public Lighting sector is reported as Scope 2-purchased electricity. A separate record is entered into CACP per subsector's kWh usage, making sure that the entry is reported under the correct Scope and with the correct emissions factor (differs for each utility provider).

## **Lighting: Reporting Inconsistencies and Troubleshooting**

Additional public lighting data were not provided upon request including park lighting, traffic controllers, and other lighting. There is indication that the data exists but was not readily available.

Electricity emissions factors for 2005 were used as proxy factors in lieu of 2008 factors. In 2008, the information was not reported in a format consistent with LGO protocol methodologies.

## **Water Transport Facilities**

The Water Transport sector of the inventory reports emission from two main sources, electricity and natural gas. This sector of the inventory consisted of electricity and natural gas for the operation of sprinkler systems, lift stations, and well pumps associated with non-waste water transport. The required data were obtained from the local government departments and regional utility providers. The utility company that services City of Lodi's water transport facilities is:

- PG&E – electricity service

This data were acquired per request and approval from both the City of Lodi and PG&E. The data were received in the following formats:

- PG&E electricity and natural gas (kWh/therms) – Excel spreadsheet indicating therms of consumption and cost by individual account

The data were inserted into the corresponding section within the MDWB raw data tabs. The data were then sorted and conditioned in order to use the recommended method for reporting emissions.

## **Water Transport Facilities: Electricity Related Emission**

According to the LGO Protocol, the recommended method for reporting emissions related to electricity consumption is summing the total number of kWh (Activity Data) and multiplying the Activity Data by a corresponding emission factor. Emission factors are values that are reported by the utility company and are stored within CACP software.

- Summed Activity (kWh/therms) x Emissions Factor = GHG Emissions

The raw data were inserted into the spreadsheet labeled *FA-Utility Raw Data* (raw data must be kept without conditioning as a quality-control reference) and then copied to the spreadsheet labeled *FA-Utility Working Data* in the MDWB to be sorted. The data were sorted within the *FA-Utility Working Data* spreadsheet to isolate lighting activity (kWh); premise type, account numbers, addresses, and service descriptions are categories used to sort the data.

Once sorted, the data were copied to the *Water Transport Working Data* spreadsheet to be separated into the different subsectors (water delivery pumps, sprinklers/irrigation, storm water, and others). The kWh and therms were then

summed per individual facility. The values per facility and grand total are reported in the *Water Transport Final Data* spreadsheet.

After the *Water Transport Final Data* spreadsheet was populated with all of the subsectors and their energy usage, the information was entered into CACP. According to the LGO Protocol, the inventory of kWh emissions for the Water Transport sector is reported as Scope 2-purchased electricity, while the inventory of therm emission is reported as Scope 1-stationary combustion.. A separate record is entered into CACP per subsector's kWh usage to ensure the entry is reported under the correct Scope and with the correct emissions factor (differs for each utility provider).

### **Water Transport Facilities: Reporting Inconsistencies and Troubleshooting**

An assumption made is that all the data were provided and some data may include only one type of consumption. For example, the drainage pumps are powered only by electricity and not natural gas.

### **Wastewater Treatment Facilities**

The Wastewater Treatment Facilities sector of the inventory reports emission from three main sources: electricity, natural gas, and wastewater processes. This sector of the inventory consisted of electricity and natural gas data from the treatment facility, wastewater pumps, and wastewater lift stations. In addition, emissions from wastewater treatment processes are also reported in this sector of the inventory. The required data were obtained from the local government departments and regional utility providers. The utility companies that service City of Lodi's wastewater facility are:

- PG&E – natural gas and electricity service
- LEU– electricity service

This data were acquired per request and approval from both the City of Lodi and utility providers. The data were received in the following format:

- PG&E electricity and natural gas (kWh/therms) – Excel spreadsheet indicating therms of consumption and cost by individual account
- LEU electricity (kWh) – Data table indicating kWh consumption and cost by address

In addition, the White Slough Waste Water Treatment Facility division provided relevant data to calculate process emissions and emissions from fuels consumed by backup generators.

The data were inserted into the corresponding section within the MDWB raw data tabs. The data were then sorted and conditioned in order to use the recommend method for reporting emissions.

## Wastewater Treatment Facilities: Electricity and Natural Gas Related Emission

According to the LGO Protocol the recommended method for reporting emissions related to electricity consumption and natural gas combustion is summing the total number of kWh or therms and multiplying them by their corresponding emission factor. Emission factors are values that are reported by the utility company and are stored within CACP software.

- Summed Activity (kWh/therm) x Emissions Factor = GHG Emissions

The raw data were inserted into the spreadsheet labeled *FA-Utility Raw Data* (raw data must be kept without conditioning as a quality-control reference) and then copied to the spreadsheet labeled *FA-Utility Working Data* in the MDWB to be sorted. The data were sorted within the *FA-Utility Working Data* spreadsheet to isolate the wastewater facility kWh and therm usage as well as wastewater transport kWh; premise type, account numbers, addresses, and service descriptions are categories used to sort the data.

Once sorted, the data were copied to the *WW-Energy Use Working Data* spreadsheet, where it was separated into the different facilities. The kWh and therms were then summed per individual facility. The values per facility and grand total are reflected in the *WW-Energy Use Final Data* spreadsheet.

After the *WW-Energy Use Final Data* spreadsheet was populated with all of the facilities and their kWh/therm usage, the information was entered into CACP. According to LGO Protocol, inventory of kWh emissions for the Wastewater Treatment Facilities sector is reported as Scope 2-purchased electricity, the inventory of therm emission is reported as Scope 1-stationary combustion, and the inventory of wastewater treatment is reported as Scope 1-process emissions. A separate record is entered into CACP per facility's kWh and therm usage to ensure the entry is reported under the correct Scope and with the correct emissions factor (differs for each utility provider).

## Wastewater Treatment Facilities: Wastewater Treatment Related Emission

According to the LGO protocol, the recommended method for reporting emissions related to wastewater treatment processes is to obtain site-specific measurements and apply a standard equation (below) based on the type of treatment system in place. The alternative method is to utilize population estimates, which applies a standard per-capita emissions rate. In 2008, the City of Lodi maintained a centralized treatment facility with an anaerobic digester.

As outlined in LGO protocol Equations 10.7 and 10.9 below, quantifying emissions from centralized treatment facilities requires collection of the following data: quantity of nitrogen produced per day, and population served by the treatment facility. The nitrification/denitrification process creates N<sub>2</sub>O, which is emitted into the atmosphere. Emissions are calculated using the following formulas, which are built into the MDWB.

- Equation 10.7: Annual N<sub>2</sub>O emissions (metric tons CO<sub>2</sub>e) = ((P<sub>total</sub> x F<sub>ind-com</sub>) x EF nit/denit x 10<sup>-6</sup>) x GWP

Where:

TERM	DESCRIPTION	VALUE
P <sub>total</sub>	= total population that is served by the centralized WWTP adjusted for industrial discharge, if applicable [person]	user input
F <sub>ind-com</sub>	= factor for industrial and commercial co-discharge waste into the sewer system	1.25
EF nit/denit	= emission factor for a WWTP with nitrification/denitrification [g N <sub>2</sub> O/person/year]	7
10 <sup>-6</sup>	= conversion from g to metric ton [metric ton/g]	10 <sup>-6</sup>
GWP	= N <sub>2</sub> O Global Warming Potential	310

Source: EPA *Inventory of US Greenhouse Gas Emissions and Sinks: 1990-2007*, Chapter 8, 8-13 (2009).

- Equation 10.9: Annual N<sub>2</sub>O emissions (metric tons CO<sub>2</sub>e) = (N Load x EF effluent x 365.25 x 10<sup>-3</sup> x 44/28) x GWP

Where:

TERM	DESCRIPTION	VALUE
N Load	= measured average total nitrogen discharged [kg N/day]	user input
EF effluent	= emission factor [kg N <sub>2</sub> O-N/kg sewage-N produced]	0.005
365.25	= conversion factor [day/year]	365.25
10 <sup>-3</sup>	= conversion from kg to metric ton [metric ton/kg]	10 <sup>-3</sup>
44/28	= molecular weight ratio of N <sub>2</sub> O to N <sub>2</sub>	1.57
GWP	= Global Warming Potential	310

Source: EPA *Inventory of US Greenhouse Gas Emissions and Sinks: 1990-2007*, Chapter 8, 8-13 (2009).

As outlined in LGO protocol Equation 10.1 below, quantifying emissions from anaerobic digesters requires collection of the following data: quantity of digester gas produced per day, and fraction of digester gas as CH<sub>4</sub>. The anaerobic digestion process creates CH<sub>4</sub>, which is captured and combusted. Due to minimal destruction inefficiencies, some gases escape the system. Emissions from digester gas are calculated using the following formula, which is built into the MDWB.

- Equation 10.1: Annual CH<sub>4</sub> emissions (metric tons CO<sub>2</sub>e) = (Digester Gas x F<sub>CH4</sub> x ρ(CH<sub>4</sub>) x (1-DE) x 0.0283 x 365.25 x 10<sup>-6</sup>) x GWP

Where:

ITEM	DESCRIPTION	VALUE
Digester Gas	= measured standard cubic feet of digester gas produced per day [ft <sup>3</sup> /day]	user input
F CH <sub>4</sub>	= measured fraction of CH <sub>4</sub> in biogas	user input
ρ(CH <sub>4</sub> )	= density of methane at standard conditions [g/m <sup>3</sup> ]	662.00
DE	= CH <sub>4</sub> Destruction Efficiency	.99
0.0283	= conversion from ft <sup>3</sup> to m <sup>3</sup> [m <sup>3</sup> /ft <sup>3</sup> ]	0.0283
365.25	= conversion factor [day/year]	365.25
10 <sup>-6</sup>	= conversion from g to metric ton [metric ton/g]	10 <sup>-6</sup>
GWP	= Global Warming Potential	21

Source: EPA *Inventory of US Greenhouse Gas Emissions and Sinks: 1990-2007*, Chapter 8, 8-7 (2009).

## Power Generation Facilities

The Power Generation sector of the inventory reports emissions from electricity and natural gas consumption by LEU facilities, transmission and distribution losses by LEU, and fugitive gasses in the transmission and distribution process. The required data were obtained from LEU, either directly or indirectly (i.e. by being directed to CARB reports).

### Power Generation Facilities: Electricity and Natural Gas Related Emissions

According to the LGO Protocol the recommended method for reporting emissions related to electricity consumption and natural gas combustion is summing the total number of kWh or therms and multiplying them by their corresponding emission factor. Emission factors are values that are reported by the utility company and are stored within CACP software.

- Summed Activity (kWh/therm) x Emissions Factor = GHG Emissions

The raw data were obtained directly from LEU in the following format:

- LEU electricity (kWh) – aggregate total electricity usage and cost for the CT1 operation
- Natural gas (MMBTU) – aggregate total natural gas usage and cost for the CT1 operation

LEU also operates the STIG facility. However, energy consumption data was not available for this facility.

The data were classified as information items because the facilities are owned and operated under a joint powers agreement with NCPA and other members.

### Power Generation Facilities: Transmission and Distribution Loss Related Emissions

The City of Lodi owns and operates the City's transmission and distribution system. The recommended method for reporting emissions related to transmission and distribution system losses is by first identifying the amount of electricity lost, and then by multiplying that amount by its corresponding emission factor. Emission factors are values that are reported by the utility company and are stored within CACP software.

- Electricity losses (kWh) x Emissions Factor = GHG Emissions

LEU provided commentary on the rate of loss for the local system (approximately 4%). The total amount of electricity transmitted by LEU was obtained from a report submitted to CARB for 2008 operations. The rate of loss was applied to the total amount. After that, the standard Scope 2 – purchased electricity methodology is applied.

### Power Generation Facilities: Transmission and Distribution Fugitive Emissions

The calculation for annual fugitive SF<sub>6</sub> emissions was very simple. Instead of the LGO protocol preferred mass balance method, a sum total value was provided for the amount of fugitive SF<sub>6</sub> emission. LEU reports this information to

CARB, so the information was readily available. The raw value was inserted into the *MPG-Raw Data* Spreadsheet and then copied to the *MPG-SF6 Final Data* Spreadsheet. According to the LGO protocol, the inventory of emissions related to SF<sub>6</sub> is reported as Scope 1-fugitive emissions. A single record is entered into CACP, to ensure that the entry is reported under the correct Scope.

### **Power Generation Facilities: Reporting Inconsistencies and Troubleshooting**

Electricity emissions factors for 2005 were used as proxy factors in lieu of 2008 factors. In 2008, the information was not reported in a format consistent with LGO protocol methodologies.

Energy consumption records could not be obtained from the STIG facility. The facility is connected directly to the transmission system. Thus, emissions from electricity consumed by the STIG facility may already be reported in the transmission and distribution losses. Energy consumption records for the CT1 facility were provided by LEU; however, it was noted that the facility is connected directly to the internal distribution system and that the figures were reported based on the amount billed to NCPA through a contractual cost-sharing agreement. Since this facility is operated under an agreement with NCPA, and because emissions from electricity consumed by the CT1 facility may already be reported in the transmission and distribution losses, these emissions were recorded as information items.

### **Vehicle Fleet, Transit Fleet and Mobile Equipment**

The Vehicle Fleet and Transit Fleet sectors of the inventory report emission from three main sources: fuel combustion, vehicle miles traveled (VMT) and refrigerants. The recommended method for reporting mobile emission varies according to the emission source. For fuel combustion, the recommended method requires individual vehicle fuel data in order to build a detailed fuel consumption record. For VMT, the recommended method involves gathering individual vehicle miles to create a detailed record. The records were acquired through the City's Fleet Services division in the following format:

- Name of vehicle or vehicle group, vehicle type, model year, class description, department, gallons consumed, fuel type, cost, and operating hours/miles
- Aggregate refrigerant purchases

### **Vehicle Fleet, Transit Fleet and Mobile Equipment: Fuel and VMT Related Emission**

According to LGO protocol, the emissions from vehicle fleet must be reported according to CO<sub>2</sub> emissions, calculated directly from fuel combustion, and N<sub>2</sub>O /CH<sub>4</sub> emissions, calculated from VMT.

- Fuel (gallons) x Emissions Factor = CO<sub>2</sub> Emissions
- VMT (miles) x Emissions Factor = N<sub>2</sub>O/CH<sub>4</sub> Emissions

The raw data were inserted into the spreadsheet labeled *VF-Raw Data Data* (raw data must be kept without conditioning as a quality-control reference) and then copied to the spreadsheet labeled *VF-Working Data* in the MDWB to be sorted by:

- Department
- Vehicle type
- Fuel type

Once sorted and conditioned, data were entered into the *VF-Detailed Fuel Final Data* and *VF-Detailed VMT Final Data* spreadsheets where the total amounts fuel consumption and VMT are reported per department and vehicle type.

After the *VF-Detailed Fuel Final Data* and *VF-Detailed VMT Final Data* spreadsheets were populated, the information was entered into CACP. According to LGO protocol, the inventory of fuel and VMT emissions for the Vehicle Fleet sector is reported as Scope 1-mobile combustion. A separate record is entered into CACP per department to ensure the records are entered as follows:

- Fuel related emissions:
  - Fuel type
  - Vehicle type
  - Model year
  - Fuel CO<sub>2</sub> coefficient - *Default*
  - Transport Average - *Highway Fuel CO<sub>2</sub> only*
- VMT related emissions:
  - Fuel type
  - Vehicle type
  - Model year
  - Fuel CO<sub>2</sub> coefficient - *Highway VMT N<sub>2</sub>O, CH<sub>4</sub>, and CAP*
  - Transport Average - *Default* for VMT emissions.

### **Vehicle Fleet, Transit Fleet and Mobile Equipment: Refrigerant Related Emission**

This sector of the inventory required refrigerant charge information. For leaked refrigerants, the recommended method requires individual data per vehicle on the amount (lbs or kg) of refrigerant recharged into the vehicle. In the event that there is not sufficient information to complete the recommended method, alternative methods can be used to calculate the amount of leaked refrigerants. In this case, aggregate refrigerant purchases were used as indicators of the amount of refrigerant recharged throughout the year. Since refrigerants were reported in aggregate, it was not possible to disaggregate data by sector (Vehicle Fleet vs. Transit Fleet), so all refrigerant related emissions were allocated to the larger vehicle fleet.

According to LGO Protocol, the recommended method for reporting emissions from leaked refrigerants is the mass balance method where HFC's that have escaped into the atmosphere are summed and then multiplied by the Global Warming Potential (GWP) factor. A simplified version of the mass balance method was used in this sector of the inventory, with purchased refrigerants serving as proxy measures of leaked refrigerants.

- Total purchased HFCs (kg) x GWP Factor = GHG Emissions

The raw data were inserted into the spreadsheet labeled *RF-Raw Data* and then copied to the spreadsheet labeled *RF-VF Working Data* in the MDWB (raw data must be kept without conditioning as a quality-control reference) to be sorted by refrigerant type. Once sorted and conditioned, the data were then entered into the *RF-VF Mass Balance Data* spreadsheet.

Once the *RF-VF Mass Balance Data* spreadsheet was populated, the information was entered into CACP. According to LGO Protocol, the inventory of refrigerant emissions for the Vehicle Fleet sector is reported as Scope 1-fugitive emissions. A separate record is entered into CACP per refrigerant and vehicle type to ensure the entries are reported under the correct Scope and with the correct GWP factor (differs for each refrigerant).

### **Vehicle Fleet, Transit Fleet and Mobile Equipment: Reporting Inconsistencies and Limitations**

Records of purchased refrigerants served as a proxy measure of leaked refrigerants in lieu of actual data. All refrigerants were recorded in the Vehicle Fleet sector because refrigerant data could not be disaggregated.

## **Government-Generated Solid Waste**

The Government-Generated Solid Waste sector of the inventory reports emission from one main source, solid waste. This sector focused exclusively on the solid waste generated by government operations. The records were acquired through

- Public Works department – manages contract with waste-hauler

and were in the following format:

- Solid Waste by Volume – City report providing the number of units, capacity and number of pick ups per week for each location

### **Government-Generated Solid Waste: Solid Waste Related Emission**

According to the LGO protocol, the recommended method for reporting emissions associated with solid waste is to acquire the volume of waste collected per department within the local government operations. This information was entered into the *WG-Solid Waste by Volume* spreadsheet. The volumes are converted to tons of waste that are ultimately sent to landfill. The totals are then

pasted into the *WG-Solid Waste Final Input Data* spreadsheet and used to create a record within CACP. The government-generated waste was entered into CACP as Scope 3 – waste related emissions. The following waste characterization<sup>4</sup> is preset in CACP with different emissions factors for each waste type:

- Paper Products – 39.4%
- Food Waste – 9.8%
- Plant Debris – 7.0%
- Wood and Textiles – 6.7%
- All other waste – 27.1%

### **Government-Generated Solid Waste : Reporting Inconsistencies and Troubleshooting**

Containers were assumed to be 90% full at pickup, which is a conservative estimate in lieu of actual records. Each record indicated whether the unit contained waste or recyclable material. 100% of the waste was assumed to be sent to landfill. Data relating to recycling containers were excluded during the calculation process because those materials were assumed to be diverted from the waste stream.

## **Employee Commute**

The Employee Commute sector of the inventory reports emission from two main sources: fuel combustion and vehicle miles traveled. This sector of the inventory utilized a survey to assess VMT and fuel data. The employees were surveyed on their work commute time, distance, vehicle type, fuel consumption, fuel type, and several reasons for not using alternative transportation like bus transit or bicycling. The records were acquired through

- Employee Commute Questionnaire – Survey

and were in the following format:

- Survey results – Excel spreadsheet

### **Employee Commute: Fuel and VMT Related Emission**

The VMT information was adjusted according to the survey response rate. The adjusted VMT for each vehicle type was entered into CACP as Scope 3 – employee commute. The Total VMT value was entered with the transport average set coefficients were set to Default and the fuel set coefficients were set to Highway VMT (N<sub>2</sub>O, CH<sub>4</sub>). The Total Fuel value was entered into CACP as Scope 3 – employee commute. For this data, the transport average set coefficients were set to Highway Fuel CO<sub>2</sub> Only and the fuel set coefficients were set to Default.

---

<sup>4</sup> Default Waste Characterization provided by the CIWMB 1999 Waste Characterization Study -- Public Administration Group: <http://www.ciwmb.ca.gov/WasteChar/BizGrpCp.asp>. Waste categories in the report were bundled to fit the waste categories of the Clean Air and Climate Protection 2009 software (CACP 2009).

## **Employee Commute : Reporting Inconsistencies and Troubleshooting**

The City opted to use a truncated form of the Employee Commute Survey alongside the full version developed by ICLEI. While the truncated survey matches the full version by generating responses regarding employee commute time, distance, vehicle type, fuel consumption and fuel type, it does not include questions to determine behavior choices – as the regular ICLEI survey does. As a result, summary statistics regarding commute choices are from the sample of 21 employees who opted to respond to the full version.

The emissions reported in this sector are derived from a sample of 94 current employees, which is a 20.5% response rate assuming the 2008 staffing level (458). The calculations rely on commute trends extrapolated from this sample, rather than all employees.

Subject: Climate Action Plan  
SCH#: 2013072024

Dear Immanuel Bereket:

The State Clearinghouse submitted the above named Negative Declaration to selected state agencies for review. The review period closed on August 12, 2013, and no state agencies submitted comments by that date. This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act.

Please call the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process. If you have a question about the above-named project, please refer to the ten-digit State Clearinghouse number when contacting this office.

Sincerely,

Scott Morgan  
Director, State Clearinghouse

**NOTICE OF AVAILABILITY AND NOTICE TO OF INTENT  
TO ADOPT A NEGATIVE DECLARATION FOR THE CITY OF LODI  
CLIMATE ACTION PLAN**

The City of Lodi has prepared an Initial Study pursuant to California Environmental Quality Act (CEQA) and the CEQA Guidelines (Public Resources Code, Division 13 and California Code of Regulations, Title 14, Chapter 3) evaluating the potential environmental impacts of the Lodi Climate Action Plan (CAP). The City proposes to adopt a Negative Declaration ("ND") because the CAP would not have a significant effect on the environment. This ND and the Initial Study describe the reasons that this project will not have a significant effect on the environment and, therefore, does not require the preparation of an environmental impact report under CEQA.

In accordance with provisions of the CEQA Guidelines, the Draft Negative Declaration tiers off of the 2009 General Plan Final Environmental Impact Report (FEIR) (SCH# 2009022075 that was certified by the City Council in April 2010. Together, this Draft Negative Declaration and the 2009 General Plan FEIR constitute the environmental record for the proposed CAP. The 2010 General Plan FEIR can be viewed at Lodi City Hall (221 West Pine Street, Lodi Ca 95240) or on the City's website [http://www.lodi.gov/com\\_dev/EIRs.html](http://www.lodi.gov/com_dev/EIRs.html)

**FILE NUMBER:** 13-ND-01

**PROJECT TITLE:** City of Lodi Climate Action Plan

**PROJECT LOCATION:** The City of Lodi Climate Action Plan is intended to provide strategies for reducing greenhouse gas emissions throughout the City of Lodi, including White Slough Water Pollution Control Facility.

**PROJECT DESCRIPTION:** The proposed project is the adoption of a policy document, the Climate Action Plan, intended to provide policy direction and identify actions the City and the community can take to significantly reduce the generation of Greenhouse Gases (GHG) consistent with California Assembly Bill (AB) 32 and Executive Order S-3-05. The purpose of the plan is to guide the development, enhancement, and ultimately the implementation of actions and strategies that reduce Lodi's greenhouse gas emissions. The plan consists of five (5) chapters and appendices that:

- Summarize climate change, outline actions by the State and City to reduce emissions, and describe how Lodi residents and business owners can participate in GHG reduction efforts;
- Describe the role public participation played in the formation of the CAP, State regulations governing climate action planning, and regional climate change initiatives and programs;
- Characterize Lodi's current GHG emissions, indicate the City's projected emissions in 2020 and 2050, and note the action by City General Plan policy to establish a reduction target;
- Propose strategies and measures the City can take to achieve its emissions reduction target, and analyze the estimated cost of the proposed measures; and

- Discuss the means by which the City will monitor the Plan's implementation, verify achievements; and fund the selected measures.

**PUBLIC REVIEW PERIOD:** As mandated by State law, the minimum public review period for this document is 30 days. The proposed Negative Declaration will be circulated for a 30-day public review period, beginning on Monday, July 15, 2013 and ending on Thursday, August 15, 2013. Copies of the Draft Negative Declaration and Draft Development Code documents are available for review at the following locations:

- **Community Development Department**, 221 West Pine Street, Lodi, CA 95240
- **Lodi Public Library**, 201 West Locust Street, Lodi, CA 95240
- **Online at** [http://www.lodi.gov/com\\_dev/EIRs.html](http://www.lodi.gov/com_dev/EIRs.html)

Any person wishing to comment on the Initial Study and proposed Negative Declaration must submit such comments in writing **no later than 5:30 pm on Thursday, August 15, 2013** to the City of Lodi at the following address:

Immanuel Bereket, Associate Planner  
City of Lodi  
P. O. Box 3006  
Lodi, CA 95241

Facsimiles at (209) 333-6842 will also be accepted up to the comment deadline (please mail the original). For further information, contact Immanuel Bereket, Associate Planner, at (209)333-6711.

A public hearing will be scheduled before the Planning Commission and City Council to receive comments on the document and to adopt the Negative Declaration. This meeting will be separately noticed when the date and time are set.

## 1.1 - INTRODUCTION AND REGULATORY GUIDANCE

This document is an Initial Study/Mitigated Negative Declaration (IS/MND) for the City of Climate Action Plan (Draft CAP). The City of Lodi has prepared a Draft Climate Action Plan using input from city staff, consultants, the public, and from various interviews, stakeholder meetings and sessions. The Draft CAP was prepared and developed consistent with the recently adopted 2010 General Plan. Pursuant to Section 15152 of the California Environmental Quality Act (CEQA) Guidelines, this Initial Study is tiered from the City of Lodi 2010 General Plan Environmental Impact Report (General Plan EIR) (State Clearinghouse Number 2009022075).

Under CEQA, tiering refers to the use of analysis contained in previously certified, broad-level Environmental Impact Reports (EIRs) (often programmatic EIRs) to support or complement project-specific EIRs or IS/NDs.<sup>1</sup> CEQA Guidelines encourage the use of tiered environmental documents to reduce delays and excessive paperwork in the environmental review process. This is accomplished in tiered documents by eliminating repetitive analyses of issues that were adequately addressed in the Program EIR and by incorporating those analyses by reference. Impacts only need to be analyzed in more detail in the Initial Study if they were not examined in the prior EIR or if findings were not adopted for significant, unavoidable impacts.

## 1.2 - PURPOSE AND DOCUMENT ORGANIZATION

The purpose of this Initial Study and proposed Negative Declaration (IS/ND) is to identify the potential environmental impacts and mitigation measures associated with the Draft Climate Action Plan. The intended use of this document is to provide information to support conclusions regarding the potential environmental impacts of the Draft CAP. The IS/ND provides the basis for input from public agencies, organizations, and interested members of the public.

This Initial Study is organized into the following chapters:

**Section 1: Introduction.** This section provides an introduction and overview of the Initial Study document.

**Section 2: Project Description.** This section describes the location and setting of the Draft CAP, along with the principal components of the project boundaries and its relations to the City's recently adopted General Plan. The section also describes the policy setting and implementation process. In addition, this section provides pertinent project details, including lead agency contact information, project location, and General Plan and Zoning designations.

---

<sup>1</sup> California Association of Environmental Professionals, 2012, CEQA Statute and Guidelines.

---

**Section 3: Environmental Determination.** This chapter summarizes environmental factors potentially affected by this project and the City's environmental determination.

**Section 4: Environmental Checklist and Findings.** Making use of the CEQA Appendix G Environmental Checklist, this chapter identifies and discusses anticipated impacts from the proposed Master Plans, providing substantiation of the findings made. The chapter concludes with the determination, based on the analysis contained in this Initial Study, that a Negative Declaration is appropriate for the proposed Master Plans.

**Chapter 5: References.** This chapter provides a list of documents used in the project.

### 1.3 - INCORPORATION BY REFERENCE

The references outlined below were utilized during preparation of this Initial Study/Mitigated Negative Declaration. The documents are available for public review at the addresses listed below. All City of Lodi documents are available at City of Lodi, Community Development Department, located at 221 West Pine Street, California 95240.

- City of Lodi General Plan 2010. State law requires every city and county to adopt a comprehensive, long-term general plan for the physical development of that city and county. The City of Lodi *General Plan*, adopted April 2010, contains goals, policies, and programs which are intended to guide land use and development decisions for the next twenty years. The *General Plan* consists of eight elements, or chapters, which together fulfill the requirements for a general plan. The *General Plan* chapter include the Land Use; Growth Management and Infrastructure; Community Design and Livability; Transportation; Parks, Recreation and Open Space; Conservation; Safety, and Noise Elements.
- City of Lodi General Plan Final Environmental Impact Report, February 2010. The City of Lodi *General Plan, Final Environmental Impact Report (General Plan FEIR), SCH2009022075*, is intended to provide information to public agencies and the general public regarding the potential environmental impacts related to implementation of the City of Lodi General Plan. The purpose of the EIR is "to identify the significant effects of a project on the environment, to identify alternatives to the project and to indicate the manner in which significant impacts can be mitigated or avoided."
- City of Lodi General Plan Draft Environmental Impact Report, November 2009. The City of Lodi, *Pubic Review Draft General Plan Environmental Impact Report, SCH2009022075*, is a first-tier evaluation of the environmental effects associated with the adoption of the updated City of Lodi General Plan.

- 
- The San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP) 2000. The City of Lodi adopted the SJMSCP in 2001, and projects under the jurisdiction of the City can seek coverage under the plan. The proposed project is consistent with the SJMSCP, as amended, as reflected in the conditions of project approval for this proposal. Pursuant to the Final EIR/EIS for the SJMSCP, dated November 15, 2000, and certified by the San Joaquin Council of Governments on December 7, 2000, implementation of the SJMSCP is expected to reduce impacts to biological resources resulting from the proposed project to a level of less-than-significant. That document is hereby incorporated by reference and is available for review during regular business hours at the San Joaquin Council of Governments (555 E. Weber Avenue, Stockton, CA 95202) or online at: [www.sicoq.org](http://www.sicoq.org).
  - City of Lodi Municipal Code. The City of Lodi *Zoning Code* is contained in Chapter 17 of the Lodi Municipal Code (LMC) and represents the minimum requirement for the promotion of public safety, health, convenience, comfort, prosperity or general welfare.

#### **1.4 - NECESSARY PUBLIC AGENCY APPROVALS:**

The City of Lodi is the lead agency with responsibility for approving the proposed Development Code update. No other public agency approvals are needed.

**2.5 - GENERAL PLAN DESIGNATION:**

The Draft CAP encompasses the entire City of Lodi General Plan area.

**2.6 - ZONING DESIGNATION:**

The Draft CAP area includes various zoning designations.

**2.7 - PROJECT ASSUMPTIONS:**

This IS/ND assumes compliance with all applicable state, federal, and local codes and regulations.

**2.8 - PROJECT BACKGROUND**

The City of Lodi adopted its current General Plan in April of 2010. The General Plan is the City's vision for how to accommodate anticipated growth within the next 20 to 30 years. The City of Lodi currently provides services to approximately 8,911.55 acres. According to the 2010 General Plan 2010, the service area will increase to approximately 10,623 acres of land (16.6 square miles) at full buildout of the General Plan boundaries. Low Density Residential will continue to represent the largest land use category in the City and will make up approximately 33 percent of the total acreage at buildout. The General Plan calls for preparation, adoption and implementation of a Climate Action Plan.

California has adopted a wide variety of regulations aimed at reducing the State's greenhouse gas (GHG) emissions. While State actions alone cannot stop global warming, the adoption and implementation of this legislation demonstrates California's leadership in addressing this critical challenge. Assembly Bill (AB) 32, the California Global Warming Solutions Act of 2006, requires California to reduce statewide GHG emissions to 1990 levels by 2020. AB 32 directs the California Air Resources Board (ARB) to develop and implement regulations that reduce statewide GHG emissions. The *Climate Change Scoping Plan* (Scoping Plan) was approved by ARB in December 2008 and outlines the State's plan to achieve the GHG reductions required in AB 32. The Scoping Plan contains the primary strategies California will implement to achieve a reduction of 169 million metric tons of carbon dioxide equivalent (MMT CO<sub>2</sub>e), or approximately 28% from the State's projected 2020 emission levels.

In the Scoping Plan, ARB encourages local governments to adopt a reduction goal for municipal operations emissions and move toward establishing similar goals for community emissions that parallel the State commitment to reduce GHGs. Though the specific role local governments will play in meeting the State's AB 32 goals is still being defined, they will nonetheless be a key player in implementing GHG reduction strategies.

Lodi's Draft CAP articulates the City's intentions with respect to reducing community-wide GHG emissions in a manner consistent with AB 32. Throughout the Draft CAP, the City outlines strategies, objectives, measures and actions to minimize energy consumption and waste; create an interconnected transportation system; and conserve, create and enhance natural assets that improve the community's quality of life. An action, program, or project would be considered consistent with the Draft CAP if, considering all of its aspects, it would further the strategies, objectives, measures, and actions set forth within the Draft CAP and not obstruct their attainment.

## **2.9 - PROJECT LOCATION**

Lodi is situated in the San Joaquin Valley between Stockton, 6 miles to the south; Sacramento, thirty-five miles to the north; and along State Route (SR) 99. The City is located on the main line of the Union Pacific Railroad and is within 5 miles of I-5 via SR-12. The regional is depicted in Figure 2.1, Regional Location Map.

The Mokelumne River forms the northern edge of the city; Harney and Hogan lane southern edge. The Central California Traction Line (CCT) railroad (north of Kettleman Lane) and SR-99 (south of Kettleman Lane) form the eastern boundary. The western boundary extends approximately one-half mile west of Lower Sacramento Road. Lodi (exclusive of White Slough Water Pollution Control

Facility) encompasses an area of 12.3 square miles. Figure 2 - 1: Regional Map illustrates the City's location in regional context.

## **2.10 - PROJECT OBJECTIVES**

The Draft CAP establishes a comprehensive community-wide GHG emissions reduction strategy for Lodi with regard to: a) buildings and energy, b) transportation and land use, and c) waste and water. The project objectives, derived from the vision statement, are expressed below.

- Adopt a CAP that will comply with and implement State law, advance citywide sustainability and reflect community values.
- Reduce Lodi's annual community-wide GHG emissions by 15% below 2005 baseline emission levels by 2020.
- Provide clear guidance to City staff and decision-makers regarding when and how to implement key actions to reduce GHG emissions.
- Inspire residents and businesses to participate in community efforts to reduce GHG emissions.

Based on these objectives, the Draft CAP defines community strategies and GHG reduction measures through text and maps. The Draft CAP also includes implementation actions corresponding to quantified GHG reduction measures. The recommended actions serve as the basis for future programming decisions related to the assignment of staff and expenditure of City funds toward implementing the CAP.

### 2.11 - PROJECT DESCRIPTION

The City of Lodi has prepared a Draft Climate Action Plan (CAP or plan) with input from the City Council, City staff, community members, the development community and citizens. Pursuant to the California Environmental Quality Act (CEQA) the City has prepared this Initial Study (IS) to assess the environmental impacts of adoption and implementation of the CAP. This IS consists of a summary, followed by a description of potential environmental effects that may result from adoption and implementation of the draft CAP.

The Draft CAP provides policies and identifies actions intended to reduce GHG emissions within the City and serves to aid the State in its implementation of Assembly Bill 32 (AB 32), the California Global Warming Solutions Act of 2006, which requires California to reduce statewide greenhouse gas (GHG) emissions to 1990 levels by 2020. AB 32 directed the California Air Resources Board (ARB) to develop and implement regulations that reduce statewide GHG emissions. The *Climate Change Scoping Plan* (Scoping Plan) was approved by ARB in December 2008 and outlines the State's plan to achieve the GHG reductions required by AB 32. The Scoping Plan contains the primary strategies that California will implement to achieve a reduction of 169 million metric tons of carbon dioxide equivalent (MMT CO<sub>2</sub>e), or approximately 28 % from the State's projected 2020 emission levels, which includes actions to be taken by local governments.

The Lodi Draft CAP provides general information about climate change and how GHG emissions within the City contribute to it, as well as an analysis of the potential effects of climate change on the City. In addition, the Draft CAP describes baseline GHG emissions produced in Lodi, and projects GHG emissions that could be expected if the Draft CAP is not implemented. The strategies, measures, and actions proposed in the Draft CAP are described in more detail under "Greenhouse Gas Emission Reduction Strategies," below.

### 2.12 - EMISSIONS INVENTORY, BASELINE AND PROJECTIONS

Chapter 3 of the Draft CAP, "Green House Gas Inventory," presents a GHG emissions inventory, establishes an emissions baseline dating back to the year 2008, provides projections of emissions in 2020 and 2030, and describes the City's emissions reduction target. Baseline emissions are determined using activity data collected from energy, water and waste collection service providers, as well as information collected as part of the General Plan process. Future emissions levels are then projected for the years 2020 and 2030, based on estimated future. The emission inventory identifies the sources, distribution, and amount of GHG emissions by emission sector, including energy consumption, transportation, solid waste, wastewater and water consumption.

### 2008 Baseline Emissions

The city of Lodi's baseline inventory is ordered by sector. A "sector" is an individual subset of the total greenhouse emission spectrum, composed of emissions relating to an economy, industry, market, or general society. The sectors that were measured in this CAP are: energy, transportation, solid waste, waste water, and water consumption. Each of these sectors is shown separately in the overall emissions spectrum to allow for specific measure development for emissions reductions.

### Energy

The energy sector consists of electricity and natural gas consumption. Energy use typically represents a large portion of total greenhouse gas emissions and is divided into residential and non-residential uses. The City obtained historical (2008) electricity consumption data from Lodi Electric Utility (LEU) and natural gas consumption data from Pacific Gas and Electric (PG&E). LEU and PG&E provided communitywide data aggregated by land use (i.e., residential and non-residential). Electricity data for kWh used from 2008-2009 was converted into CO<sub>2</sub>e using an LEU-specific emission factor. Natural gas data for therms was converted into CO<sub>2</sub>e using a PG&E-specific natural gas emission factor.

2008 BASELINE EMISSIONS		
Emissions Sector	MT CO <sub>2</sub> e	%
Residential Electricity	61,295	12
Residential Natural Gas	52,548	10
Non-Residential Electricity	118,486	23
Non-Residential Natural Gas	63,320	13
<b>Total Energy Consumption</b>	<b>295,649</b>	<b>58</b>
On-Road Vehicles	141,124	28
Off-Road Vehicles and Equipment	7,500	1
<b>Total Transportation Emissions</b>	<b>148,624</b>	<b>29</b>
Solid Waste	54,305	11
Water Consumption	5,231	1
Wastewater Treatment	3,649	1
Municipal	6,717	1
<b>TOTAL</b>	<b>514,175</b>	<b>100</b>

### Transportation

The transportation sector provides an estimate of emissions generated from vehicle miles traveled (VMT) by passenger cars and freight trucks. The inventory accounts for two types of trips; any vehicle trips generated by Lodi land uses that stay within the city limits and half of all vehicle trips generated by Lodi land uses that either begin or end outside of Lodi. The inventory does not account for pass-through trips. Based on these trips, annual vehicle miles traveled (VMT) is estimated using existing daily traffic volumes determined during the 2008 General Plan update process, and average trip length assumptions generated from U.S. Census data. Annual VMT is translated into emissions using a

transportation-specific emissions factor, which was developed using national data for vehicle fleet mix, fuel economy and average fuel combustion. The transportation sector also accounts for emissions from off-road vehicles.

### **Solid Waste**

Solid waste emissions are generated from decomposing organic waste in place and methane management activities. Solid waste generated within the City, as a result of community and municipal activities, is collected by Waste Management and deposited at various landfills throughout the region. Annual tons of waste generated and typical waste composition data was obtained from Cal Recycle to determine the total emissions.

### **WASTEWATER MASTER PLAN**

The City owns and operates the WSWPCF. The wastewater treatment facility has a current average dry weather flow capacity of 8.5 million gallons per day (mgd). Current dry weather flow is approximately 5.7 mgd. The wastewater treatment facility was originally constructed in 1966 with a capacity of 5.8 mgd. In the late 1980's and early 1990's the City expanded the treatment capacity to 6.3 mgd, and also improved the level of treatment. Between 2003 and 2009 the City again expanded the treatment capacity to the current 8.5 mgd and added tertiary treatment and ultraviolet light disinfection improvements. In conjunction with the 2007 improvements to the WSWPCF, the 48-inch trunk line from the City limits to the treatment plant influent headworks was lined, thereby reducing its effective diameter to 42-inches.

### **Water Consumption**

Unlike the wastewater sector, emissions from the water sector come from the electricity used to treat, convey, and distribute potable water. Total electricity consumption associated with both municipal operations and communitywide land uses was obtained from the City. Emissions were determined using the LEU-specific emissions factor.

## **2.13 - REDUCTION STRATEGIES**

Measures are grouped into five strategy areas that represent the primary ways to reduce communitywide GHG emissions in Lodi. Strategy areas are as follows:

### **Energy Efficiency**

The Draft CAP's energy efficiency measures are primarily focused on the efficient use of electricity, though some measures will also result in natural gas savings. Measures include retrofits of existing residential and commercial buildings, building system efficiency upgrades, streetlight upgrades, building shade tree planting, and increasing renewable energy use.

In 2008, the city's consumption of electricity for appliances, lighting and cooling, and combustion of natural gas for heating, cooking, and other processes within residential, commercial, and industrial buildings generated 58% (295,649 MT

CO<sub>2</sub>e) of Lodi's total GHG emissions. Of the total energy consumption in Lodi, residential energy use accounted for 39% (113,843 CO<sub>2</sub>e) whereas non-residential energy use accounted for 61% (181,806 MT CO<sub>2</sub>e).

About 2/3 of houses in Lodi were built prior to the adoption of California's Title 24 energy efficiency requirements in 1978, and 79% of the building stock that is projected to exist in Lodi in 2020 has already been constructed. Lodi stands to realize a large portion of its emissions reductions from building retrofits. While energy efficiency retrofits reduce building-related greenhouse gas emissions, residents can also benefit from noticeable savings on their utility bills and improved comfort of their home or business. Since 1998, Lodi Electric Utility (LEU) has spent more than \$8.3 million in Public Benefits Charge funds on energy efficiency programs, resulting in an 18% peak demand reduction and 16% energy reduction. LEU's energy conservation programs include:

- **Appliance Rebate** for the purchase of an energy efficient refrigerator, clothes washer or dishwasher;
- **Home Improvement Rebate** for replacing insulation, installing attic fans, whole house fans, shade screens or window tinting, radiant barriers or replacing HVAC air conditioning systems;
- **HVAC System Test Rebate** for performing high-end duct system testing to measure air flow, air return and system balance;
- **Commercial/Industrial Rebates** for building envelope improvements and system efficiency upgrades;
- **Commercial Energy Efficiency Financing** up to \$150,000 in financing for energy efficiency improvements, to be repaid on the participant's monthly utility bill; and
- **Energy Assessments** on-line and on-site for residential and commercial customers.

LEU will continue to implement its energy conservation programs, and increase participation through a comprehensive public outreach campaign. The total GHG emission reduction potential of the energy efficiency strategy is 16,386 MT CO<sub>2</sub>e /yr in 2020 and 29,352 MT CO<sub>2</sub>e/yr in 2030.

### **Transportation**

Transportation is the second largest sector in Lodi's baseline inventory, producing 29% (148,624 MT CO<sub>2</sub>e) of Lodi's total GHG emissions (514,175 MT CO<sub>2</sub>e) in 2008. Emissions in this sector are primarily the result of the combustion of fossil fuels and are determined largely by the number of vehicle miles traveled (VMT) by residents and employees. The best practices for reducing transportation-related greenhouse gas emissions involve reducing the number of vehicle trips through various transportation demand management (TDM) strategies and enhancing the viability of transit and other forms of alternative transportation. In addition, transit-oriented development and mixed-use developments result in denser uses near commercial centers that contribute to decreased vehicle trips. The greenhouse gas reduction strategies presented in this CAP primarily focus on TDM strategies

and transit system improvements to reduce greenhouse gas emissions. The total GHG emission reduction potential of the transportation strategy is 18,967 MT CO<sub>2</sub>e/yr in 2020 and 25,153 MT CO<sub>2</sub>e/yr in 2030.

### **Solid Waste**

Waste disposal creates emissions when organic waste (e.g., food scraps, yard clippings, paper, and wood products) is buried in landfills and anaerobic digestion takes place, emitting methane. In Lodi, 11% of GHG emissions are associated with solid waste generation and disposal in landfills. The CAP's waste diversion measures seek to divert organic waste from landfills by reusing construction materials when possible and increasing communitywide participation in food scrap and yard waste composting.

Construction waste accounts for approximately 29% of the waste stream statewide, and includes items such as lumber, drywall, metals, masonry, carpet, plastics, pipes, rocks, and dirt. Most of these materials are inert and do not contribute to landfill methane generation upon decomposition. However, waste lumber comprises nearly 15% of the total statewide waste stream, and represents a significant source of potential GHG emissions reductions. Per the California 2010 Building Standards Code (Title 24), effective January 1, 2011, all jurisdictions must require the diversion of 50% of construction waste materials generated during certain construction and renovation projects. This CAP assumes the city will enforce these diversion requirements in all applicable future projects.

The Draft CAP proposes reductions methods associated with increased methane capture at landfills. The California Air Resources Board approved a new regulation (effective in June 2010) that requires operators of certain landfills to install methane control systems that operate in an optimal manner. Historically, the majority of solid waste generated in Lodi is disposed of at the North County Landfill. While this landfill already has a methane capture system in place, it is less efficient than currently available technology used elsewhere throughout the state. For purposes of this CAP, it is assumed that efficiency improvements will be made to the existing methane capture system at the North County Landfill, but that the city will play no role in implementing these improvements.

The total GHG emission reduction potential of the waste strategy is 9,129 MT CO<sub>2</sub>e/yr in 2020 and 13,260 MT CO<sub>2</sub>e/yr in 2030.

### **Water**

Water-related GHG emissions are mainly caused by energy used to pump, transport, heat, cool, and treat potable water. Emissions associated with this energy use accounted for approximately 1% of the communitywide GHG inventory. With water supplies expected to continue declining into the future, water conservation strategies have the double benefit of reducing GHG emissions and aligning demand with future water availability. The measures included in this section quantify the greenhouse gas emissions reductions of conservation programs that are already underway in the city.

### **Green Infrastructure**

Green infrastructure refers mainly to the open spaces and vegetation that provide places for recreation, wildlife habitat, and relief from the heat of the sun. The term can also refer to building-integrated vegetation projects, such as green walls and green roofs. There are numerous benefits to planting trees and increasing vegetated surfaces, including reduced surface runoff, increases in natural habitat, reduced urban heat island effect, and opportunities for carbon sequestration. While vegetation-related carbon sequestration is known to reduce greenhouse gases in the atmosphere, the precise level to which this occurs is not well understood and difficult to quantify at this time. Regardless, the other benefits associated with increased tree and vegetation cover, such as reducing the urban heat island effect, may increase comfort and encourage more individuals to walk, ride their bikes, or take transit, indirectly reducing greenhouse gas emissions while contributing to the overall well-being of Lodi's residents.

As a supplement to the quantified measures in this CAP, two measures are included in the Green Infrastructure section that are not quantified, but rather focus on environmental stewardship and education through local agency partnerships and demonstration projects.

---

## **Section 3**

---

**3.1 - ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED**

The environmental factors checked below would be potentially affected by this project as indicated by the checklist on the following pages.

Environmental Factors Potentially Affected		
<input type="checkbox"/> Aesthetics	<input type="checkbox"/> Agriculture Resources	<input type="checkbox"/> Air Quality
<input type="checkbox"/> Greenhouse Gas Emissions	<input type="checkbox"/> Biological Resources	<input type="checkbox"/> Cultural Resources
<input type="checkbox"/> Geology/Soils	<input type="checkbox"/> Hazards & Hazardous Materials	<input type="checkbox"/> Hydrology/Water Quality
<input type="checkbox"/> Land Use/Planning	<input type="checkbox"/> Mineral Resources	<input type="checkbox"/> Noise
<input type="checkbox"/> Population/Housing	<input type="checkbox"/> Public Services	<input type="checkbox"/> Recreation
<input type="checkbox"/> Transportation/Traffic	<input type="checkbox"/> Utilities/Services Systems	
<input checked="" type="checkbox"/> None With Mitigation	<input type="checkbox"/> Mandatory Findings of Significance	

**3.2 - ENVIRONMENTAL DETERMINATION**

- I find that the proposed project could not have a significant effect on the environment, and a Negative Declaration will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A Mitigated Negative Declaration will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an Environmental Impact Report is required.
- I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measure based on the earlier analysis as described on attached sheets. An Environmental Impact Report is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or Negative Declaration pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or Negative Declaration, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

## **Section 4**

---

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**1 AESTHETICS .**

*Would the Project:*

a. Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) The Draft CAP proposes strategies and measures that would aid in reducing the City's emission of GHGs, and thus, would not directly lead to development that would affect scenic vista. The CAP does not recommend specific densities, building heights massing or design of any projects. However, the proposed measures encourage installation of photovoltaic (PV) panels and other distributed renewable energy technologies on the homes, businesses and City facilities to provide alternate sources of energy. PV panels could be placed on rooftops, which could potentially alter scenic views for homes or businesses located behind the rooftop panels. However, the placement of PV panels for residential or civic use would likely not be large enough to significantly affect views from other residences located uphill or behind the rooftop panels. Installation of these panels would require standard building permits from the City, which would ensure the PV panels would not have a specific, adverse impact on public health and safety. Implementation of the Draft Cap would result in **less-than significant-impact**. Further, the CAP would implement 2010 General Plan policies and the impacts of implementing the CAP would be similar to those identified in the 2010 General Plan FEIR.
- b) There are no designated state scenic highways within or within view of the City. Therefore, there would be **no impact**.
- c) The Draft CAP recommends rehabilitation and renovation of existing buildings to improve energy efficiency and the development of infill projects to maximize land use potential in the city. The installation of PV panels on rooftops could result in slight changes to existing visual character. However, renovations and new development would be designed to be compatible with existing development. PV panels would be associated with existing structures and installation of PV panels would be subject to Planning and Building review and approval, ensuring that they do not result in substantial changes to the visual character of the city. Implementation of the CAP would result in a **less-than-significant-impact**.

- d) Implementation of the Draft CAP would not result in the development of major light sources, although distributed installation of PV panels on homes, businesses, and City facilities is encouraged to reduce Lodi's dependence on energy sources that produce GHGs. PV panels are specifically designed to absorb, not reflect, sunlight. Thus, their placement and orientation on individual properties would not adversely affect day or nighttime views in the area.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**2 AGRICULTURE RESOURCES:**

*In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the Project:*

- |  |                          |                          |                          |                                     |
|--|--------------------------|--------------------------|--------------------------|-------------------------------------|
| a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program in the California Resources Agency, to non-agricultural use? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| c. Conflict with existing zoning for, or cause rezoning of forest land (as defined in PRC Sec. 4526), or timberland zoned Timberland Production (as defined in PRC Sec. 51104 (g))?  | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| d. Result in loss of forest land or conversion of forest land to non-forest use?   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?  | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

a-e) The Draft CAP does not propose a specific construction plan. The CAP implementation 2010 General Plan policies and the impacts of implementing the Draft CAP would be similar to those identified in the 2010 General Plan FEIR. The Draft CAP would have no effect on Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as farming, gardening, and similar uses would be allowed in all zoning districts by right. **No impact** would occur with respect to this issue.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
<b>3 AIR QUALITY.</b>				
<i>Would the Project:</i>				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	■	☐
b. Violate any air quality standard or contribute substantially to an existing or Projected air quality violation?	☐	☐	■	☐
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☐	☐	■	☐
d. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	■	☐
e. Create objectionable odors affecting a substantial number of people?	☐	☐	☐	■
a) The purpose of the Draft CAP is to reduce GHG emissions within the city to help contribute to global efforts to reduce the effects of climate change. Recommendations within of the Draft CAP include reducing vehicle use, developing bicycle and pedestrian facilities, enhancing public transit, using renewable energy, improving energy efficiency in buildings, improving energy management, increasing water conservation, and promoting green infrastructure and urban agriculture. In addition to reducing GHGs, each of these elements would help to reduce criteria air pollutants and would not conflict with or obstruct the San Joaquin Valley Air Pollution Control District’s Air Quality Management Plan. Implementation of the Draft CAP would result in a <b>less-than-significant impact</b> .				
b-d) Growth regulated by, and the impacts of, the Draft CAP would be similar to those identified in the 2010 General Plan FEIR. Generally, a project would conflict with or potentially obstruct implementation of an air quality plan if it would contribute to population growth in excess of that forecasted in the air quality management plan (California Air Resources Control Board, 2007). The proposed Draft CAP would not result in an increase of population for the City beyond that forecast in the 2010 General Plan FEIR. Consequently, as noted in the FEIR, the Draft CAP is not expected to generate population in excess of that envisioned in the local Air Quality Management Plan (AQMP). <b>Less-than-significant-impact</b> would occur.				
e) The Draft CAP does not proposed strategies or measures that would directly or indirectly result in the creation of objectionable odors. Therefore, there would be <b>no impact</b> .				

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**4 GREENHOUSE GAS EMISSIONS.**

*Would the Project:*

- |    |   |                          |                          |                          |                                     |
|----|---|--------------------------|--------------------------|--------------------------|-------------------------------------|
| a. | Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?      | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| b. | Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

a) Implementation of strategies and measures proposed within the Draft CAP would result in annual communitywide GHG emission reductions by 2020. Table 1 in the Project Description identifies the MT CO<sub>2</sub>e reductions and percentages that would be expected from implementation of each proposed Draft CAP strategy and objective. Implementation of the Draft CAP would therefore directly and indirectly *reduce* community-wide GHGs. There would be **no impact**.

b) California has adopted a wide variety of regulations aimed at reducing the State’s greenhouse gas (GHG) emissions. AB 32, the California Global Warming Solutions Act of 2006, requires California to reduce statewide GHG emissions to 1990 levels by 2020. AB 32 directs ARB to develop and implement regulations that reduce statewide GHG emissions. The *Climate Change Scoping Plan* (Scoping Plan) was approved by ARB in December 2008 and outlines the State’s plan to achieve the GHG reductions required in AB 32. The Scoping Plan contains the primary strategies California will implement to achieve a reduction of 169 MMT CO<sub>2</sub>e, or approximately 28% from the State’s projected 2020 emission levels. In the Scoping Plan, ARB encourages local governments to adopt a reduction goal for municipal operations emissions and move toward establishing similar goals for community emissions that parallel the State commitment to reduce GHGs. The Scoping Plan recommends that local governments consider adopting a goal of 15% below current emissions levels to assist the State in implementing AB 32.

Lodi’s Draft CAP articulates the City’s intentions with respect to reducing community-wide GHG emissions in a manner consistent with AB 32. Implementation of strategies and measures proposed within the Draft CAP would result in annual community-wide GHG emission reductions of approximately 15,660 MT CO<sub>2</sub>e by 2020. Table 1 in the Project Description identifies the MT CO<sub>2</sub>e reductions and percentages that would be expected from implementation of each proposed Draft CAP strategy and objective. Implementation of the Draft CAP alone would not meet the City’s goal of reducing GHG emissions to 25% below 2004 baseline levels, although it would exceed a 15% community-wide GHG reduction target by 2020, which would be consistent with AB 32 Scoping Plan recommendations. As of this writing, there are no adopted regional or local plans,

policies or regulations other than the Scoping Plan and the City's Draft CAP which are designed to reduce emissions of GHGs. There would be **no impact**.

Issues	Potentially Significant Impact	Potentially Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
<b>5 BIOLOGICAL RESOURCES</b>				
<i>Would the proposal:</i>				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) The CAP would not modify, either directly or indirectly, habitats of any species identified as a candidate sensitive, or special status. Furthermore, existing General Plan policies would significantly constrain development in areas that support sensitive or special status species. In addition, if development projects in these areas were to involve such species, project specific biological studies and mitigation would be required as part of specific project approvals in compliance with applicable Federal, State and local requirements. The CAP's implementation would, therefore, result in a **less-than-significant-impact**.

b) The implementation of the CAP would have a **less-than-significant-impact**.

- c) The implementation of the CAP is not expected to cause adverse effect on federally protected wetlands. In the event wetlands could potentially be affected by future actions, project-specific wetland studies and mitigation, if necessary, would be required pursuant to existing Clean Water Act requirements. Implementation of the CAP would result in a **less-than-significant-impact**.
- d) See Item C above. The primary wildlife corridors in the City of Lodi are within the *Mokelumne River* area and to a lesser extent along open areas within the city. Implementation of the CAP would result in a **less-than-significant-impact**.
- e) The City of Lodi CAP does not contain any component that would directly or indirectly conflict with local policies that protect biological resources. Therefore, there would be a **less-than-significant-impact**.
- f) No Habitat Conservation Plan or Natural Communities Conservation Plan would be affected by the CAP.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**6 CULTURAL RESOURCES**

*Would the Project:*

a. Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Directly or indirectly destroy a unique paleontological resource or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Disturb any human remains, including those interred outside of formal cemeteries.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) The Draft CAP does not propose any strategy or measure that would directly result in an adverse change in the significance of a historical resource. However, the Draft CAP does recommend retrofitting and renovation of older buildings to be more energy efficient and thus reduce GHGs associated with energy consumption. Most of the housing stock in the City is more than 70 years old, thus some of the structures which may be retrofitted could be eligible for classification as historic resources. All major alterations to structures in the City are reviewed by the Planning staff through the City's established through permitting process, which routinely ensures that the historical integrity of structures is not be compromised. Continued compliance with the City's established permitting procedures and process would ensure a **less-than-significant impact**.
- b) The CAP would have no impact on historical resources, as it would not directly involve excavation, demolition, tree removal, no other physical changes that would affect a archeological resources in the community. If there are potential impacts to historical resources that would b associated with specific projects, these would be addressed in a project-specific CEQA reviews. In addition, the 2010 General Plan requires protection of significant archaeological resources. A **less-than-significant** impact would occur with the implementation of the CAP.
- c) **The City of Lodi** does not contain any known paleontological resources or unique geologic features. The proposed CAP is implementation of a draft plan intended to reduce community-wide GHG emissions and does not include any elements that would directly or indirectly destroy these features. There is a remote possibility that ground-disturbing activities that occur as a result of building additional pedestrian and bicycle infrastructure pursuant to the Draft CAP could uncover unique paleontological resources or sites or unique geologic features. In the event such resources or features are discovered, compliance with State regulations and General Plan policies pertaining to discovery of paleontological resources would ensure that this impact is **less-than-significant**.

- d) There is a remote possibility that ground-disturbing activities that occur as a result of building additional pedestrian and bicycle infrastructure pursuant to the CAP could uncover previously unknown human remains. In the event this occurs, compliance with State regulations and General Plan policies pertaining to discovery of human remains would ensure that this impact is **less-than-significant**.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
<b>7 GEOLOGY AND SOILS.</b>				
<i>Would the Project:</i>				
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii. Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii. Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv. Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. Result in substantial soil erosion, or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Be located on expansive soils, as defined in Table 18-1-13 of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
a)				
i. There are no mapped surface or subsurface faults that traverse the city and the city is not listed within a State designated Alquist-Priolo Earthquake Fault Zone. Any future construction will be required to employ building standards set forth in the City's Building Code, including specific provisions for seismic design of structures. In addition, the General Plan FEIR concluded that impacts associated with seismic-related ground shaking would be reduced to <b>less than significant</b> due to mandatory compliance with building codes, policies contained in the General Plan, and mitigation measures included in the General Plan EIR.				
ii. The Draft CAP would implement measures intended to reduce community-wide GHGs, none of which would directly affect the potential to expose the people or structures to strong seismic ground shaking. Some components of the Draft CAP				

would include the development of an expanded net work of bike and pedestrian facilities and retrofitting existing residential and commercial structures to be more energy efficient, and thus reduce GHG emissions associated with energy consumption. These bike and pedestrian facilities, new structures, and building retrofits could be adversely affected by strong seismic ground shaking if not developed in compliance with building code in effect. However, all future projects associated with the implementation of the Draft CAP would be required to meet the building code in effect, which would ensure that these project components do not expose people or structures to the risks associated with strong seismic ground shaking. This would be **less-than-significant** impact.

- iii. The City of Lodi is not considered to be particularly susceptible to liquefaction, although some of the northern areas located along Mokelumne River may be relatively more susceptible. However, similar to Items (a) (i, ii), all future projects associated with implementation of the Draft CAP would be required to meet engineering and structural requirements, as well as applicable building and fire codes. Such compliance would ensure safety to structures and people. The impact would **less-than-significant**.
- iv). The City of Lodi is located in an area of generally level terrain that would not produce a landslide. Average grade within the City is between zero and five degrees. Further, according to the Official Maps of Seismic Hazard Zones provided by the State of California Department of Conservation, the City of Lodi is not located within an earthquake-induced landslide zone, which is defined as an area where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacement. As a result, **no impacts** related to landslides would occur.
- c) No future project resulting from implementation of the Draft CAP would directly involve major movement of topsoil or directly result in substantial soil erosion. In the event that proposed residential or commercial retrofits or renovations, construction of bike paths and pedestrian improvements, such activities would be subject to the City's Grading Ordinance to reduce erosion impacts. As a normal and standard condition of approval for future development proposals, projects would be required to prepare and have approved individual Stormwater Pollution Prevention Plans (SWPPPs) that mandate construction and post-construction water quality provisions, including but not limited to erosion control plans during construction, installation of biofilters and/or mechanical cleansing of stormwater run-off and similar elements. Compliance with the applicable regulations would reduce impacts to **less-than-significant**.
- d) All projects that may possibly be developed as a result of implementation of the Draft CAP would be subject to applicable engineering and City building code requirements, which would ensure that they are developed in a way that

minimizes the possible effects of expansive soil. Compliance with existing code regulations would ensure a **less-than-significant impact**.

- e) The City of Lodi uses a sewer system and does not require the use of alternative wastewater disposal systems or septic tanks. Thus, there would be **no impact**.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
<b>8 HAZARDS AND HAZARDOUS MATERIALS.</b> <i>Would the Project:</i>				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard for people residing or working in the Project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. For a Project within the vicinity of a private airstrip, would the Project result in a safety hazard for people residing or working in the Project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
a) The Draft CAP and the future projects that could potentially result from implementation of the Draft CAP would not result in the routine transport, use, or disposal of hazardous materials. It is possible that construction activities associated with new mixed-use or transit-oriented development projects or residential and commercial retrofit and renovation projects recommended by the Draft CAP would require use of construction materials, such as paints and solvents, but not in				

large enough quantities to cause adverse effects. This would be a **less-than-significant-impact**.

- b) Retrofitting of buildings constructed prior to 1978 could create a risk of worker exposure to lead-based paints and asbestos. Contractors would be required to conform to strict state and federal EPA regulations regarding work on such structures, including worker training and containment and removal of hazardous materials. This would reduce the risk on the surrounding environment and worker health to a **less-than-significant-impact**.
- c) The implementation of the CAP would not involve direct handling or emission of hazardous materials. Indirect effects associated with future projects, including those on sites nearby or upwind of sensitive receptors (e.g., residential land uses), or within one-quarter mile of a school, would be addressed through environmental review when an application is submitted to the City. As the CAP does not enable any specific development project, **no impact** would occur relative to this issue.
- d) The CAP presents a citywide program, though proposed development associated with it would be concentrated in older parts of town. The CAP does not propose or enable any specific development project. New developments would be required to go through project level environmental review and would be evaluated and controlled by the 2010 General Plan EIR. The City of Lodi's CAP would have a **less-than-significant-impact** relative to this issue.
- e) There are no public or private airports within the City limits of City of Lodi, nor is the City within two miles of a private or public airfield. The City limits are outside of the Part 77 Horizontal Surface zone of the Lodi Airpark and Kingdon Executive Airport. Part 77 Horizontal Surface zone consists of the airport's primary, horizontal, conical, approach and transitional surfaces. Therefore, **no impact** is anticipated.
- f) See e) above. No impact is anticipated.
- g) The City's 2010 General Plan identifies both urban and wildland fire hazards exist in the Lodi Planning Area, creating the potential for injury, loss of life, and property damage. Urban fires primarily involve the uncontrolled burning of residential, commercial, and/or industrial structures due to human activities. Factors that exacerbate urban structural fires include substandard building construction, highly flammable materials, delayed response times, and inadequate fire protection services.

The CAP does not include any strategies that would impair implementation of or interfere with an adopted emergency response plan or emergency evacuation plan. Therefore, the CAP's implementation would have **less-than-significant-impact** relative to emergency evacuation plans.

- h) The City of Lodi is not characterized by substantial areas of wildlands. The topography of the City is relatively homogenous and steep slopes that could contribute to wildland fires are not common. The City's General Plan indicates that less than one percent of the City and its immediate vicinity has "Moderate" fire hazard potential.

No project that could be associated with the CAP's strategies would expose residences or wildlands to any wildfire threat. The policies of the CAP seek to mitigate the impacts of climate change. The CAP's implementation would have **less-than-significant-impact** in relation to wildland fires.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**9 HYDROLOGY AND WATER QUALITY**

*Would the Project:*

a. Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (i.e., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f. Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. Place housing within a 100-year flood hazard area, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h. Place within a 100-year floodplain structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j. Inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) The Draft CAP recommends energy efficiency renovations within existing residential and commercial structures. Construction associated with these projects could increase erosion and adversely affect urban runoff. However, the City enforces

General Plan policies that require urban runoff controls, and enforces the adopted stormwater ordinance, all of which would prevent pollutants from entering drainages. Proper enforcement and compliance with both National Pollutant Discharge Elimination System (NPDES) requirements and the City's implementing stormwater ordinance would ensure that water quality would not be adversely affected by construction and renovation activities resulting from implementation of the Draft CAP. This would be a **less-than-significant** impact.

- b) The Draft CAP recommends numerous water conservation measures, which may result in reduced demand for groundwater supplies. The Draft CAP does not recommend any strategies or measures that would require additional water supply that would be attained from groundwater supplies and would not result in any future projects that would substantially interfere with groundwater recharge. There would be **no impact**.
- c) The Draft CAP does not recommend any strategy or measure that would directly alter drainage patterns. No streams or rivers are anticipated to be altered. The Draft CAP does recommend construction of additional pedestrian and bicycle paths, which may indirectly result in slight alterations to drainage patterns. However, the changes would not be substantial, and any changes that would occur would be subject to existing federal and state regulations. Compliance with existing regulations would result in a **less-than-significant** impact.
- d) The Draft CAP encourages the development of an expanded network of bike and pedestrian facilities, expansion of existing transit facilities, and retrofitting existing residential and commercial structures for renewable energy. Runoff that would result from these facilities and developments could contribute to the flood potential of existing stream channels. However, the Draft CAP does not directly enable this development, and all proposed projects would be subject to environmental and regulatory reviews. These standards mandate installation of either biological or mechanical methods of treating and cleansing stormwater runoff prior to entering the City and regional drainage system, or equivalent water quality features. With adherence to these requirements, this impact would be **less-than-significant** impact.
- e) See Item (d). This would be **less-than-significant** impact.
- f) Although there is a potential for surface water pollution from construction of new development, such water quality impacts would be reduced to a less-than-significant level by adherence to City of Lodi and Regional Water Quality Control Board surface water quality standards, including applicable NPDES requirements. Water quality features would be required by the City as part of the normal development review process to reduce the potential for water pollution to a **less-than-significant** level.
- g) The Draft CAP would not place housing within a 100-year flood hazard area identified on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other

flood hazard delineation map because it does not propose construction. Therefore, **no impact** would occur.

- h) In coordination with the 2030 General Plan, the Draft CAP would regulate development within the 100-year flood zone. However, as discussed in the 2010 General Plan FEIR, 2010 General Plan requires developments to incorporate adequate mitigation measures to achieve an acceptable level of risk from potential flooding hazards. The FEIR concludes that this and other policies would reduce flood hazards to a less than significant level. Because development regulated by the Development Code would be consistent with forecasts contained in the 2010 General Plan FEIR, flooding impacts associated with Development Code implementation would also be **less-than-significant**.
- i) The City of Lodi is located in a dam inundation area for the Pardee and Camanche Dam and dike system. Flood water from the Pardee dam would take 4 hours and 20 minutes to reach west Lodi, and flood water from the Camanche Dam and dike system would take 4 to 6 hours to reach Lodi. No strategy or measure proposed within the Draft CAP would expose people or structures to these risks. The impact would be **less-than-significant**.
- j) Lodi is not subject to risks relating to seiche or tsunamis. Lodi is located inland from the Pacific Ocean and as such, is not subject to tsunami hazards. The project limits are relatively flat and fully urbanized and therefore not susceptible to mudflows. The potential for exposure to such risks would be the same as that identified for the 2030 General Plan and, with implementation of 2010 General Plan policies and existing City regulations, would be reduced to a **less-than-significant** level.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**10 LAND USE AND PLANNING.**

*Would the Project:*

a. Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating on environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) The physical division of an established community typically refers to the construction of a physical feature (such as an interstate highway or railroad tracks) or removal of a means of access (such as a local road or bridge) that would impair mobility within an existing community, or between a community and outlying area. The Draft CAP proposes strategies and policies that would improve pedestrian and bicycle circulation, and at the same time provide alternative to vehicular transportation. The Draft CAP encourages the creation of infrastructure that improves connectivity throughout the community. The plan contains no language that recommends or supports the division of an established community. **No impact** would occur as result of the plan's implantation.
- b) The Draft CAP is consistent with, and builds the goals of the 2010 Lodi General Plan. The Draft CAP proposes strategies and measures to reduce GHG emissions. Implementing the Draft CAP would not conflict with existing policies, and where conflicts do occur, the Draft CAP strategies and measures would generally result in greater avoidance or mitigation of environmental effects, as the Draft CAP is designed to mitigate adverse environmental impacts associated with global climate change. Therefore, **no impact** would occur due to implementation of the Draft CAP.
- c) No Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan would conflict with implementation of the Draft CAP. Therefore, **no impact** would occur due to implementation of the Draft CAP.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
<b>11 MINERAL RESOURCES</b>				
<i>Would the Project:</i>				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	☐	☐	☐	■
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	■

a-b) The Draft CAP proposes strategies and policies that would improve pedestrian and bicycle circulation, and at the same time provide alternative to vehicular transportation. The Draft CAP encourages the creation of infrastructure that improves connectivity throughout the community. The Draft CAP contains no language that recommends or supports extraction of mineral resources. In addition, the 2010 General Plan prohibits the extraction of mineral resources that could result in significant environmental impacts. Implementation of the Draft Cap would be consistent with that regulated by the 2010 General Plan and forecast in the 2010 General Plan FEIR. **No impact** to mineral resources would occur due to implementation of the Draft CAP.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**12 NOISE**

*Would the Project result in:*

a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. A substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. A substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without the Project?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. For a Project within the vicinity of a private airstrip, would the Project expose people residing or working in the Project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) While the Draft CAP does not recommend any strategy or measure that would generate excessive amounts of noise, construction activity associated with recommended energy efficiency retrofits in residential or commercial buildings, expansion of bicycle and pedestrian facilities, and installation of distributed renewable energy systems could possibly result in temporary increases in noise levels.

As discussed in Section 4.9 of the 2030 General Plan FEIR, all construction activities would be required to adhere to the following General Plan policies:

- N-G1 Protect humans, the natural environment, and property from manmade hazards due to excessive noise exposure.
- N-G2 Protect sensitive uses, including schools, hospitals, and senior care facilities, from excessive noise.
- N-P1 Control and mitigate noise at the source where feasible, as opposed to at the receptor end.
- N-P2 Encourage the control of noise through site design, building design, landscaping, hours of operation, and other techniques for new development deemed to be noise generators.

N-P3 Use the noise and land use compatibility matrix provided in the General Plan 2010 and allowable noise exposure levels as review criteria for all new land uses. Incorporate noise attenuation measures for all Projects that have noise exposure levels of “conditionally acceptable” and higher. These may include:

- Façades constructed with substantial weight and insulation;
- Sound-rated windows in habitable rooms;
- Sound-rated doors in all exterior entries;
- Active cancellation;
- Acoustic baffling of vents for chimneys, fans and gable ends;
- Ventilation system affording comfort under • closed-window conditions; and
- Double doors and heavy roofs with ceilings of two layers of gypsum board on resilient channels to meet the highest noise level reduction requirements.

In addition, noise in the City is governed by Chapter 9.24 of the Municipal Code, which specifically declares that loud, unnecessary, and unusual noise is a nuisance and is unlawful. The criteria for determining whether a nuisance exists includes the ambient noise level, the sound level of the objectionable noise, the intensity of the noise, whether the noise is continuous or intermittent, the duration and tonal content of the noise, the proximity of the noise to sleeping facilities, the zoning of the area, and the nature of the source. The City of Lodi Municipal Code regulations relevant to construction noise are:

9.24.020 a. General Noise Regulations. Notwithstanding any other provision of this chapter, and in addition thereto, it is unlawful for any persons to willfully make or continue or permit or cause to be made or continued, any loud, unnecessary or unusual noise which unreasonably disturbs the peace and quiet of any neighborhood or which causes discomfort or annoyance to any reasonable person of normal noise sensitivity.

9.24.030 c. It is unlawful for any person, firm or corporation to cause, permit or generate any noise or sound as described herein between the hours of 10:00 p.m. and 7:00 a.m. which exceeds the ambient noise levels at the property line of any residential property as determined at the time of such reading by more than five decibels. This section shall be applicable whether such noise or sound is of a commercial or noncommercial nature.

Since the exact nature of future construction that could occur pursuant to the Draft CAP is not known at this time, construction noise levels cannot be estimated. All construction activities must comply with the City's noise ordinance. In addition, future projects which would potentially cause noise levels exceeding noise ordinance requirements would be required to undergo acoustical analysis to determine specific impacts. Construction activity noise levels for projects resulting from the Draft CAP would not be excessive when compared to those associated

with similar construction projects not associated with the Draft CAP. Since potential noise levels would be temporary in duration and must comply with the City's noise ordinance, and because future project specific impacts would require further evaluation and mitigation, this would be a **less-than-significant impact**.

- b) Similar to the evaluation within Item (a), temporary construction activities resulting from implementation of the Draft CAP could potentially result in excessive groundborne vibration or groundborne noise levels for a temporary period of time associated with recommended energy efficiency retrofits in residential or commercial buildings, expansion of bicycle and pedestrian facilities, and installation of distributed renewable energy systems. All construction activities must comply with the City's noise ordinance, which prohibits construction noise between 10:00 PM to 7:00 AM seven days a week. In addition, future projects which would potentially cause excessive groundborne vibration would be required to undergo environmental analysis to determine specific impacts. Construction activity vibration levels for projects resulting from the Draft CAP would not be excessive when compared to those associated with similar construction projects. Since potential groundborne vibration would be temporary in duration and must comply with the construction hour provisions of the City's noise ordinance, and because future-project specific impacts would require further evaluation and mitigation, this would be a **less-than-significant impact**.
- c) The Draft CAP encourages strategies designed to reduce vehicular traffic and to increase alternative mode of travel. No increase in local traffic volumes is anticipated as a result of implementing the Draft CAP. Therefore, future ambient noise levels should be similar to or somewhat reduced from present levels. This would be a **less-than-significant impact**.
- d) One source of temporary ambient noise in Lodi would be construction activity, as described in Item (a) above. Since the Draft CAP encourages continued investment in existing homes to reduce energy consumption, there would continue to be construction-related noise in the city. Compliance with the City's noise ordinance would reduce impacts to this would be a **less-than-significant impact**.
- e) There is not an airport located within two (2) miles of the city limits. The Draft CAP would not expose people excessive noise levels generated by public use airports, or private airstrips. The closest airport to the city site is the Lodi Airpark, located approximately four (4) miles southwest of the city limits, and supports twenty to thirty (20-30) operations per day. The airport's noise "footprint" does not extend beyond the immediate airport boundary. There would be **no impact**.
- f) No private airstrip is located within or near Lodi. There would be **no impact**.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**13 POPULATION AND HOUSING**

*Would the Project:*

a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) The Draft Cap includes strategies and measures that seek to reduce GHG emission. Proposed measures include encouraging public transport expansion and retrofitting existing residential and commercial buildings to make them more energy efficient. The CAP does not recommend any specific development, density or number of residential units. Commercial and residential energy efficiency retrofits that may occur as a result of the Draft CAP would update homes already located in the city to make them more energy efficient and would not be likely to include additions that make homes larger and accommodate more people. Therefore, impacts would be **less-than -significant**.
- b) Although the Draft CAP strategies and measures encourage energy efficient retrofits for existing homes, the Draft CAP does not include measures to increase or decrease density or displace homes. Replacement housing would not be necessary. This would be a **less-than-significant-impact**.
- c) The Draft Cap contains no strategies that encourage the displacement of existing housing. Implementation of the Draft CAP poses a **less-than-significant-impact**.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**14 PUBLIC SERVICES**

*Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*

a. Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**City of Lodi General Plan**

The Lodi General Plan Growth Management and Infrastructure Element addressed public services.

GM-G4: Provide public facilities-including police and fire services, schools and libraries commensurate with the needs of the existing and future population.

**Existing Conditions**

Fire Protection

The Lodi Fire Department (LFD) provides fire protection, basic life support (BLS), fire prevention, technical rescue, and hazardous materials response services to the City of Lodi. The LFD employs 48 firefighters, captains, and engineers. In addition, LFD employs 4 battalion chiefs, 2 division chiefs, 1 fire chief, 2 support staff, and 1 inspector for a total department work force of 59. LFD maintains 4 front line fire apparatus capable of 1500 GPM, one Truck Company, 100 ft aerial, 2 reserve apparatus, and various support vehicles. The LFD has 4 fire stations located throughout the City of Lodi.

Police

The Lodi Police Department provides law enforcement and animal services to the City of Lodi. The LPD has 117 positions including 78 Sworn Officers. The LPD will service the area that will be annexed. In addition, the LPD maintains SWAT van, 1 SWAT armored Vehicle, 1 Mobile Command Center, 1 DUI trailer, 1 Crime Prevention van, 1 FET van, 24 patrol cars, 25 undercover cars, 4 motorcycles, 1 bomb squad van, and 4 volunteer vehicles. The LPD also maintains an average of 1.25-minute emergency response time and maintains an average of 31 minutes per call at the scene of the incident.

## Schools

The Lodi Unified School District provides public education for grades preschool through twelve on a traditional calendar system. The District employs 3,018 contracted employees, including 1,573 teachers. The District maintains thirty elementary schools, seven middle schools, and ten alternative schools, and three charter schools.

Parks and Recreation. The City of Lodi operates a total of 27 parks, natural open space areas, and sports field. Park facilities in Lodi range from mini-parks and tot lots to larger regional parks and natural open space areas, in accordance with the City of Lodi Park development standards. Several parks serve the dual purpose of a park facility and a storm drainage detention basin during the winter rainy season. The City of Lodi General Plan established a standard of 8 acres of neighborhood and community parkland per 1,000 population, including school parks and storm drainage detention basin parks, and 3.9 acres of neighborhood and community parkland per 1,000 population, excluding school parks and storm drainage detention basin parks.

- a-i) The Lodi Fire Department (LFD) provides fire protection, basic life support (BLS), fire prevention, technical rescue, and hazardous materials response services to the City of Lodi. The Draft CAP does not propose population growth and would not contribute greatly to the need for increased fire protection services. Thus, implementation of the Draft CAP would not result in a need for additional Fire Department services. This would be a **less-than-significant** impact.
- a-ii) The Draft CAP would no result in a substantial increase of residents as it does not encourage growth. Increase in population would be governed by the RHNA, the Housing Element, and the 2010 Lodi General Plan, which contains policies to provide for adequate and orderly increase in fire protection services. As the Draft CAP does not recommend any specific projects, all future development would undergo environmental review when formal applications are submitted to the City. Therefore, the implementation of the plan would not increase the need for Fire Department's protection services within the City. Implementation the Draft CAP would result in a **less-than-significant** impact.
- a-iii) Implementation of the Draft CAP is not expected to result in substantial population growth and would not necessitate an increase in school district services. Thus, implementation of the Draft CAP's would result in a **less-than-significant** impact.
- a-iv) The City of Lodi operates a total of 27 parks, natural open space areas, and sports field. Park facilities in Lodi range from mini-parks and tot lots to larger regional parks and natural open space areas. Implementation of the Draft CAP is not expected to result in substantial population growth, and thus would not contribute greatly to the nee for additional park facilities. This would be a **less-than-significant** impact.

a-v) As discussed above, the Draft CAP does not propose population growth. Impacts related to library and other services would be **less-than-significant**.

Issues		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
<b>15</b>	<b>RECREATION</b>				
a.	Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b.	Does the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) Implementation of the Draft CAP is not expected to result in substantial population growth, and thus would not result in increased physical deterioration of parks and recreational facilities. Conversely, the Draft CAP promotes the expansion of the current network of bicycle and pedestrian trails, which could provide additional recreational facilities within Lodi, and possibly lessen wear on existing facilities. This would be a **less-than-significant** impact.
- b) The Draft CAP specifically recommends that the City implement the bike infrastructure improvements contained in the City's current Bicycle Master Plan and key improvements to be identified in a proposed pedestrian obstacle study, with the objective of encouraging complete streets throughout Lodi.

Construction of these facilities could potentially result in adverse impacts on the environment. However, environmental impacts associated with such facilities would likely be minimal, due to the built-out urban nature of the city and the likelihood that such facilities would be constructed within existing rights-of-way. In any case, prior to construction of additional bike or pedestrian trails, the City would be required to prepare subsequent project-level environmental documentation as required by CEQA. These documents would provide site-specific environmental analyses that would analyze all possible impacts and recommend mitigation if necessary. Because adverse impacts associated with bicycle and pedestrian trail construction pursuant to the Draft CAP would likely not be substantial, and because additional project-level analysis would ensure that physical impacts do not occur, this would be a **less-than-significant** impact.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**16 TRANSPORTATION/TRAFFIC**

*Would the Project:*

a. Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g. Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) None of the proposed objectives and strategies in the Draft CAP encourage, promote or causes an increase in vehicular traffic relative to existing conditions. To the contrary, implementation of Draft CAP strategies and measures would increase the availability of transit service for Lodi residents, add additional bike and pedestrian facilities. Achieving each of these goals would result in a reduction in traffic loads, which would reduce the number of vehicle trips, volume to capacity ratio, and intersection congestion within the City. Furthermore, no proposed strategy or measure would directly increase traffic in relation to the existing traffic load and capacity of the street system. This would be a **less-than-significant impact**.

b) The San Joaquin County Congestion Management Program (CMP) documents the existing and future conditions along the County's Congestion Management Agency (CMA) roadway system. The San Joaquin County Lodi County Congestion Management Plan (CMP) requires a regional traffic impact analysis when a Project adds 50 or more peak hour vehicles to a CMP Highway system intersection or 150 or more peak hour trips to a mainline freeway link. The intent of CAP policies relative to new development is encourage carpool uses, increase convenience of transit, which would reduce vehicular GHG emissions. The CAP'S implementation

would result in **less-than-significant** impacts in relation to traffic and road network level of service.

- c) The Project site is located roughly two miles from the Lodi Airpark and approximately four miles from the Kingdon Executive Airport. Implementation of the proposed Development Code would have no effect on air traffic patterns. **No impact** would occur.
- d) The CAP encourages development of pedestrian and bicycle infrastructure and features that will serve to reduce GHG emissions. These facilities would not increase hazards but rather have the opposite effect by providing features to make crossings and roads safer and more convenient for pedestrians and cyclists, including a number of strategies, including use of new signage, paving materials, and bike lanes. In having a beneficial effect on the public safety aspects of the City's road network particularly for non-motorized traffic, the plan's implementation would have **no impact** relative to this issue.
- e) The Draft CAP recommends strategies and measures that would increase safety for drivers, pedestrians, and bicyclists and seeks to reduce the number of automobiles on City streets, both of which may actually make access for emergency vehicles easier and more efficient. No strategy or measure proposed within the Draft CAP would result in the development of uses or facilities that would degrade emergency access. This would be a **less-than-significant-impact**.
- f) Implementation of the Draft CAP would not substantially increase parking demand or remove existing parking. Conversely, the Draft CAP encourages walking, biking, carpooling, and public transit use and discourages single occupancy vehicle use. Implementation of the Draft CAP could reduce the need for parking spaces and possibly result in less demand for parking. This would be a **less-than-significant impact**.
- g) The Draft CAP supports and enhances adopted City policies, plans, and programs supporting alternative transportation. Therefore the CAP's implementation would have **no impact** in relation to this issue.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
--------	--------------------------------	--	------------------------------	-----------

**17 UTILITIES AND SERVICE SYSTEMS**

*Would the Project:*

a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's Projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f. Be served by a landfill with sufficient permitted capacity to accommodate the Project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. Comply with federal, state, and local statutes, and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

a) Implementation of the Draft CAP would not trigger population increase. Thus, there would be no increase in demand for wastewater treatment that would exceed treatment requirements. This would be a **less-than-significant impact**.

b) Implementation of the Draft CAP would not result in a significant increase in population. Thus, resulting needs for water and wastewater treatment would not increase substantially. No expanded or new treatment facilities would be required. This would be a **less-than-significant impact**.

c) Increase in population due to new development could increase in the amount of storm water runoff, which could necessitate the need for more and larger storm water drainage facilities. However, implementation of the Draft CAP would not result in a significant increase in either population or new development. Thus, it is not likely that storm water runoff would increase with implementation of the Draft CAP to the extent that new or expanded drainage facilities would be needed. This impact would be **less-than-significant impact**.

d) Implementation of the Draft CAP would not result in a significant increase in population. The Draft CAP does not directly enable development and all projects

would be subject to environmental and regulatory review. Thus, no new water supplies would be required. Water demand projections for Lodi indicate that the City has sufficient water supplies for anticipated growth in Lodi. This impact would be **less-than-significant** impact.

- e) The City owns and operates the wastewater collection system within its corporate limits. The collection system includes separate domestic and industrial sewers and related pumping facilities. Untreated wastewater is piped to the City's treatment plant through pipes, utilizing both gravity flow and lift stations, where appropriate. The City also owns the treatment facilities at the White Slough Water Pollution Control Facility (WSWPCF) located approximately 6 miles southwest of the City. The City has adopted and maintains a *Wastewater Master Plan* to estimate future infrastructure and service demands within Lodi. Because Draft CAP does not directly enable new development inconsistent with development projections regulated by the 2010 General Plan, sufficient plant capacity would continue to be available and impacts relating to wastewater service would be **less than significant**.
- f) As indicated in the General Plan EIR, The increased solid waste due to implementation of the General Plan could be accommodated within the existing landfill capacity. Adoption of the Draft CAP would not facilitate any substantial new development activity beyond that analyzed in the General Plan EIR, and thus will not lead to any significant solid waste production beyond that previously indicated. Furthermore, compliance with the City's Source Reduction and Recycling Element (SRRE) program, whereby all future development projects must divert solid waste to meet state diversion goals associated with AB 939, as well as State and County waste reduction programs and policies, would reduce the volume of solid waste entering landfills. Review of future projects will continue be carried out to ensure that the projects are consistent with all General Plan Policies and Policy Actions and the SRRE program. Adherence to such requirements would reduce potential impacts associated with solid waste to a less than significant impact level. Growth regulated by the Draft CAP would be consistent with that regulated by the 2030 General Plan and forecast in the 2010 General Plan FEIR. Therefore, the Draft CAP would not create any impacts beyond those identified in the 2010 General Plan FEIR and impacts would be **less than significant**.
- g) The Draft CAP does not recommend any strategy or measure that does not comply with applicable solid waste regulations. Conversely, the CAP promotes recycling and measures to reduce the City's waste stream and achieve County wide waste reduction goals. There will be **no impact**.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
<b>18 MANDATORY FINDINGS OF SIGNIFICANCE</b>				
a. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a Project are considerable when viewed in connection with the effects of past Projects, the effects of other current Projects, and the effects of probable future Projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- a) As discussed in Section IV, *Biological Resources* and Section V, *Cultural Resources*, the Draft CAP does not have the potential to substantially reduce habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory.

The purpose of the Draft CAP is to reduce community-wide GHG emissions in Lodi with the intention of reducing environmental impacts associated with global climate change. The Draft CAP proposes strategies and measures to lessen numerous environmental impacts and does not contain any strategy or measure that would either directly substantially reduce habitat, reduce wildlife populations, threaten animal or plant community restrict the range of species, or eliminate examples of history or prehistory. This would be a **less-than-significant impact**.

- b) The Draft CAP would not result in any adverse environmental impacts that are cumulatively considerable. The Draft CAP is intended to contribute to a cumulative reduction in GHG emissions and to reduce adaptation impacts associated with global climate change, both of which would have beneficial cumulative environmental effects. The CAP contains measures that, if enacted, would reduce GHG emissions through encouraging the use of alternative modes of transportation, promoting residential and commercial energy and water efficiency, increasing use of

renewable energy, investing in green infrastructure and open space, and reducing waste. These measures would, in general, have beneficial effects on the environment. Future land uses and development determined to be consistent with the CAP would not make a cumulatively considerable contribution to the production of GHG emissions. In addition, The CAP'S short-term and long-term goals are in alignment in this regard; so it is highly unlikely that it would have short-term goals that would disadvantage long-term environmental goals. The CAP's implementation would thus have a **less-than-significant** impact.

- c) As discussed in Section III, *Air Quality*; Section VI, *Geology and Soils*; Section VII, *Hazards and Hazardous Materials*; Section VIII, *Hydrology and Water Quality*; Section XI, *Noise*; and Section XV, *Transportation and Traffic*, implementation of the Draft CAP would not create environmental effects that would adversely affect human beings. The Draft CAP is a policy document tended to reduce Lodi's community-wide GHG emissions to help cumulatively address the adverse environmental impacts associated with global climate change, while also protecting and enhancing the quality of life in Lodi. Its strategies and measures strive to protect the environment, enhance human health and safety, and conserve natural resources, both within and beyond Lodi. Adoption and implementation of the Draft CAP would result in beneficial environmental effects, and would not cause substantial adverse direct or indirect effects on human beings resulting from a change in the physical environment. Impacts would be **less-than-significant**.

**PLANNING COMMISSION RESOLUTION NO. 13-**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LODI RECOMMENDING TO THE CITY COUNCIL ADOPTION OF THE PROPOSED DRAFT CLIMATE ACTION PLAN AND TO CERTIFY THE NEGATIVE DECLARATION**

- WHEREAS,** on January 20, 2009, the City Council of the City of Lodi adopted a 2010 General Plan which calls for preparation and adoption of a Climate Action Plan; and
- WHEREAS,** on February 15, 2012, the Climate Action Plan (CAP) project was initiated to streamline environmental review of future development projects in the City of Lodi consistent with the California Environmental Quality Act (CEQA) Guidelines Section 15183.5(b) and the San Joaquin Valley Air Pollution Control District CEQA Air Quality Guidelines. The CAP identifies a strategy, reduction measures, and implementation strategies the City will use to achieve the State-recommended greenhouse gas (GHG) emissions reduction target of 15% below 2008 emissions levels by 2020; and
- WHEREAS,** City Staff and the Consultant have been working diligently since that time to prepare a draft Climate Action Plan; and
- WHEREAS,** the City of Lodi has prepared a draft Climate Action Plan, which was released for public review on September 2, 2013; and
- WHEREAS,** the Citywide Climate Action Plan identifies strategies the City will use to achieve the State-recommended greenhouse gas (GHG) emissions reduction target of 15% below 2008 emissions levels by 2020; and
- WHEREAS,** the City conducted an Initial Study pursuant to CEQA to determine if the proposed Citywide Climate Action Plan would have any significant effect on the environment; and
- WHEREAS,** CEQA does not require a detailed evaluation of all projects that could conceivably be developed consistent with Climate Action Plan policies, but rather requires the City to conduct project-level environmental review for subsequent projects as appropriate; and
- WHEREAS,** the Initial Study concluded that the proposed Citywide Climate Action Plan would have no significant environmental impacts; and
- WHEREAS,** on July 12, 2013, a Notice of Intent to Adopt a Negative Declaration was prepared, posted by the San Joaquin County Clerk, and circulated for a 30 day public review period in accordance with CEQA; and
- WHEREAS,** on July 18, 2013, a Notice of Intent to Adopt a Negative Declaration was published on the Lodi News Sentinel; and
- WHEREAS,** no comments were received from the public during the public review period; and
- WHEREAS,** the Planning Commission, after giving all public notices required by State law and the Lodi Municipal Code, held a duly noticed public hearing on October 9, 2013 to consider the Project; and
- WHEREAS,** at such public hearing, the Planning Commission considered all testimony and information received at the public hearing, the oral report from City staff, the written report from City staff dated October 9, 2013, exhibits presented, pertinent plans and documents, the Negative Declaration, and other materials and information contained in the record of proceedings relating to the Project, which are maintained at the offices of the City of Lodi Planning Division (collectively, "Environmental Information"); and

**WHEREAS**, all legal prerequisites to the approval of this request have occurred.

**NOW, THEREFORE, BE IT FOUND** that the Planning Commission of the City of Lodi hereby incorporates the staff report and attachments, project file, testimony presented at the time of the hearing, and written comments, on this matter, and make the following findings:

1. The recitals above are true and correct and are incorporated herein by reference.
2. The Negative Declaration is the appropriate environmental document for the Project.
3. The environmental documents for the Project have been prepared, published, circulated, and reviewed in accordance with CEQA.
4. The Planning Commission has reviewed, considered, and evaluated all of the Environmental Information.
5. The Negative Declaration reflects the independent judgment and analysis of the City as the lead agency for the Project.
6. There is no substantial evidence in light of the whole record before the Planning Commission, that the Project will have a significant effect on the environment.
7. The Planning Commission does hereby recommend that the City Council adopt the Negative Declaration as part of its consideration and approval of the proposed Citywide Climate Action Plan.
8. The draft Climate Action Plan is consistent with all of the applicable objectives, policies, general land uses, programs, and actions of all applicable elements of the General Plan.
9. The draft Climate Action Plan will not be detrimental to the public convenience, health, safety, or general welfare of the City.
10. The draft Climate Action Plan is internally consistent with other applicable provisions of the policies.

**NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED** as follows:

1. The foregoing recitals are true and correct and incorporated herein by reference.
2. Based on the foregoing, the Planning Commission hereby recommends that the City Council adopt a Resolution adopting the draft Climate Action Plan and Certify the Negative Declaration as an adequate environmental documentation.

**Dated: October 9, 2013**

I hereby certify that Resolution No. 13- was passed and adopted by the Planning Commission of the City of Lodi at a regular meeting held on Wednesday, October 9, 2013, by the following vote:

**AYES:** Commissioners:  
**NOES:** Commissioners:  
**ABSENT:** Commissioners:
