SUBJECT: Lodi White Slough Water Pollution Control Facility Groundwater Investigation

Enclosed is a copy of our report concerning groundwater issues surrounding the City's water pollution control facility. This detailed report includes groundwater conditions, sources of potential groundwater degradation and recommendations for additional work – both investigation-type work as well as facility improvements to mitigate nitrogen impacts.

While the complete groundwater picture in the area is complex and not totally characterized, the City is moving forward with selecting measures to reduce nitrogen loading to our property in an environmentally and fiscally sound manner. As described in the report, we have a number of techniques to evaluate and welcome any comments you may have in this regard.

We will also forward to you an electronic copy of the report as soon as it is available.

Sincerely,

A handwritten signature in black ink that reads "Richard C. Prima, Jr." with a stylized flourish at the end.

Richard C. Prima, Jr.  
Public Works Director
